

# Robert Wood's Astronomical League Observation Record – Open Clusters

## Introduction

Welcome to my log of 125 Open Clusters. This project was initiated in the summer of 2023. The final 5 objects were added in November of 2024. All images were taken through an Astro Tech 80ED and captured with either a ZSO ASI183MC or a ZSO ASI533 MC Pro. The images were live stacked and stretched in SharpCap. Typically, a 5-minute total integration time was used for most objects. For objects that exhibited exceptional interest like nebulae, the integration time was increased.

The stacked image was transformed into black and white and inverted to show the negative. This approach, in my opinion, reveals much more contrast for the fainter objects and gives the feel of an old-time atlas.

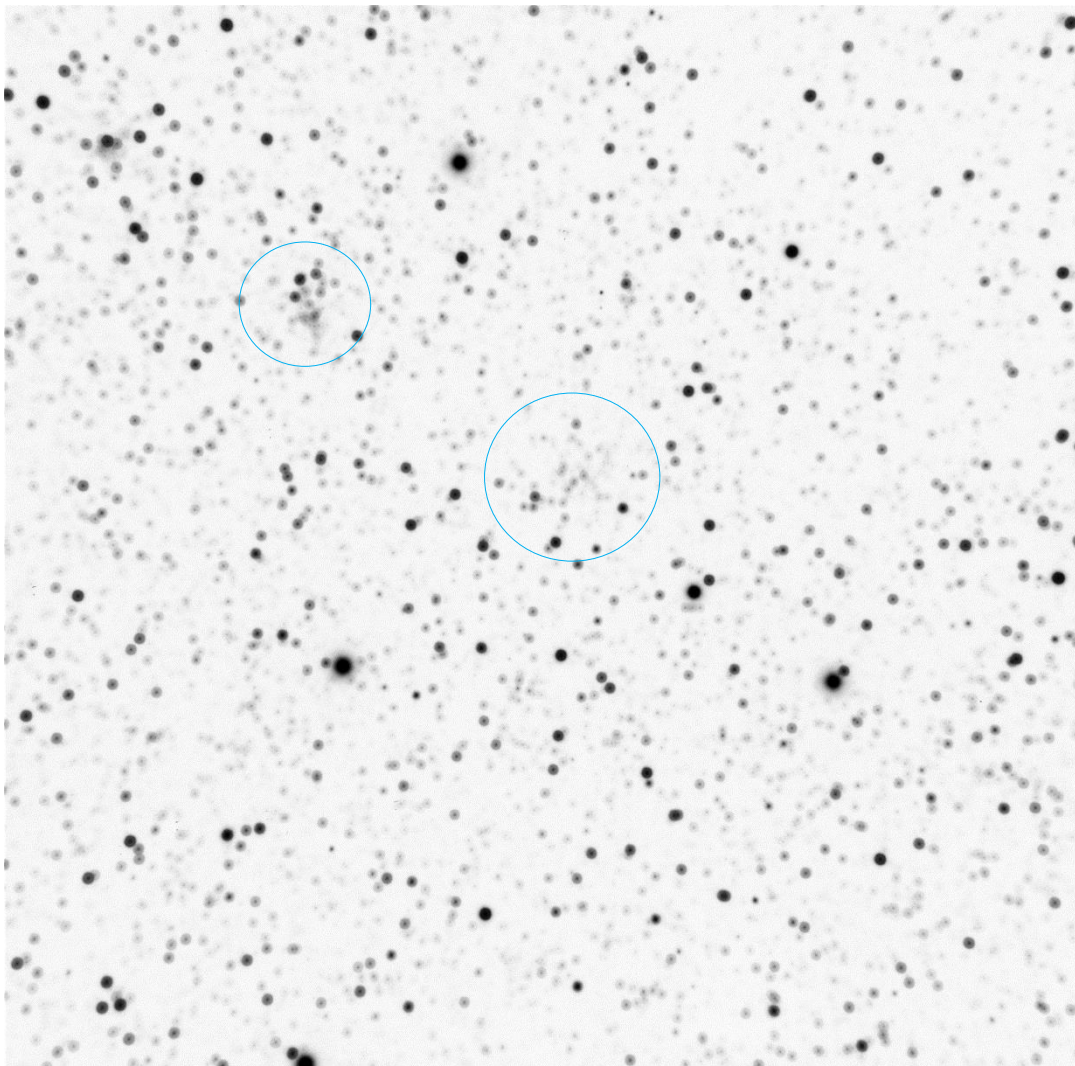

The objects are arranged in order of Right Ascension. The Trumpler Cluster Classification is my estimate as determined by my observation notes and the image followed by the Sky Atlas 2000.0 Companion designation in parenthesis, if available. The most frequent deviations from my estimated and the reference was in the degree of concentration of the cluster. Judging between “little central concentration” and “no noticeable concentration” seems to be a challenge for me. The other frequent deviation was in judging the numbers of associated stars in the cluster. I believe I got better with both these estimates over time.

*Robert Wood*

# Observation Log Sheet

Object	<b>Berkeley 58</b>	Date	12/16/23
Right Ascension (2000)	00h00m13s	Time	19:59
Declination (2000)	+60°56'45"	Sky: Transparency	Average
Constellation	Cassiopeia	Seeing	Average
Magnitude	10.10	Location	West Columbia TX
Angular Diameter (')	5	Instrument	Astro Tech AT80ED
Concentration Class	IV-1-p	Camera	ZWO ASI533 MC Pro
Distance (ly)	12000	Sub Exposure (sec)	15
Diameter (ly)	18	Total Exposure (min)	6.5
		Image Software	SharpCap 4.0

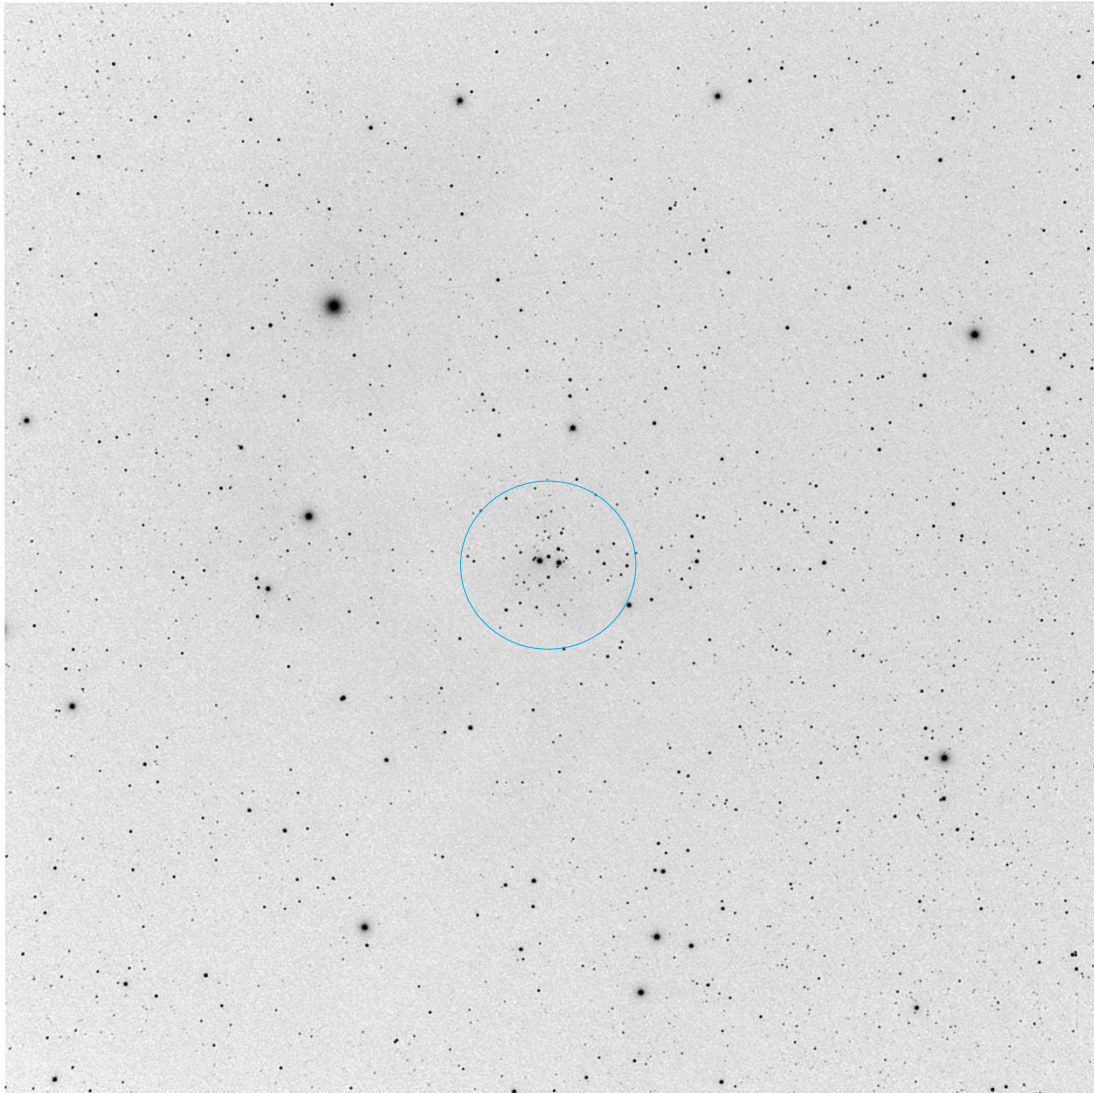

Visual Description      A very difficult cluster, faint, not well detached. Less than 50 fainter stars. NGC 7790 with faint nebulosity is just to the upper left in the frame.

# Observation Log Sheet

Object	<b>Berkeley 59</b>	Date	11/8/24
Right Ascension (2000)	00h03m32s	Time	19:24
Declination (2000)	+67°33'33"	Sky: Transparency	Average
Constellation	Cephus	Seeing	Average
Magnitude	10.4	Location	West Columbia TX
Angular Diameter (')	10	Instrument	Astro Tech AT80ED
Concentration Class	I-2-m	Camera	ZWO ASI533 MC Pro
Distance (ly)		Sub Exposure (sec)	15
Diameter (ly)		Total Exposure (min)	10.25
		Image Software	SharpCap 4.0

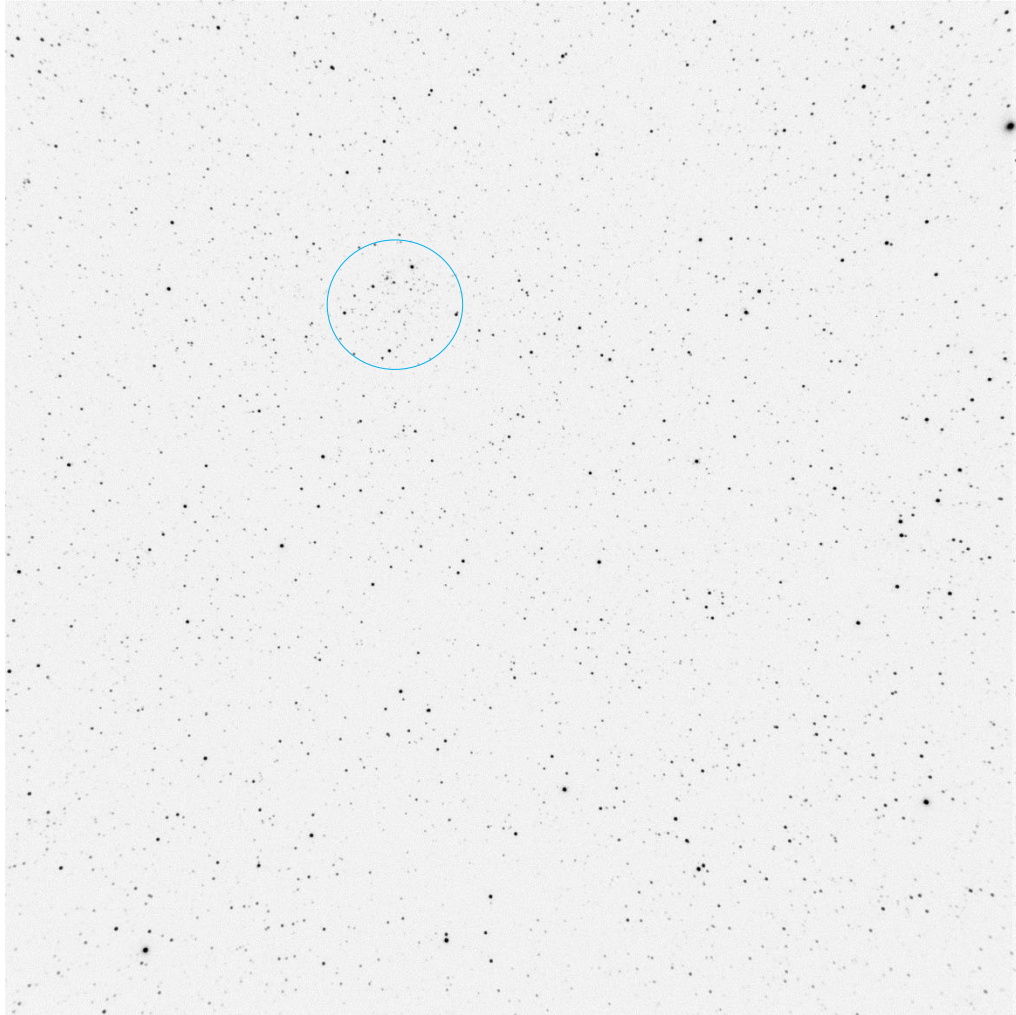

Visual Description      About 50 or more stars well concentrated and surrounded by nebulosity.

# Observation Log Sheet

Object	<b>King 13</b>	Date	1/29/24
Right Ascension (2000)	00h11m20s	Time	19:50
Declination (2000)	+61°18'13"	Sky: Transparency	Below Average
Constellation	Cassiopeia	Seeing	Average
Magnitude	9.90	Location	West Columbia TX
Angular Diameter (')	5	Instrument	Astro Tech AT80ED
Concentration Class	II-3-p	Camera	ZWO ASI533MC Pro
Distance (ly)		Sub Exposure (sec)	15
Diameter (ly)		Total Exposure (min)	5.0
		Image Software	SharpCap 4.0

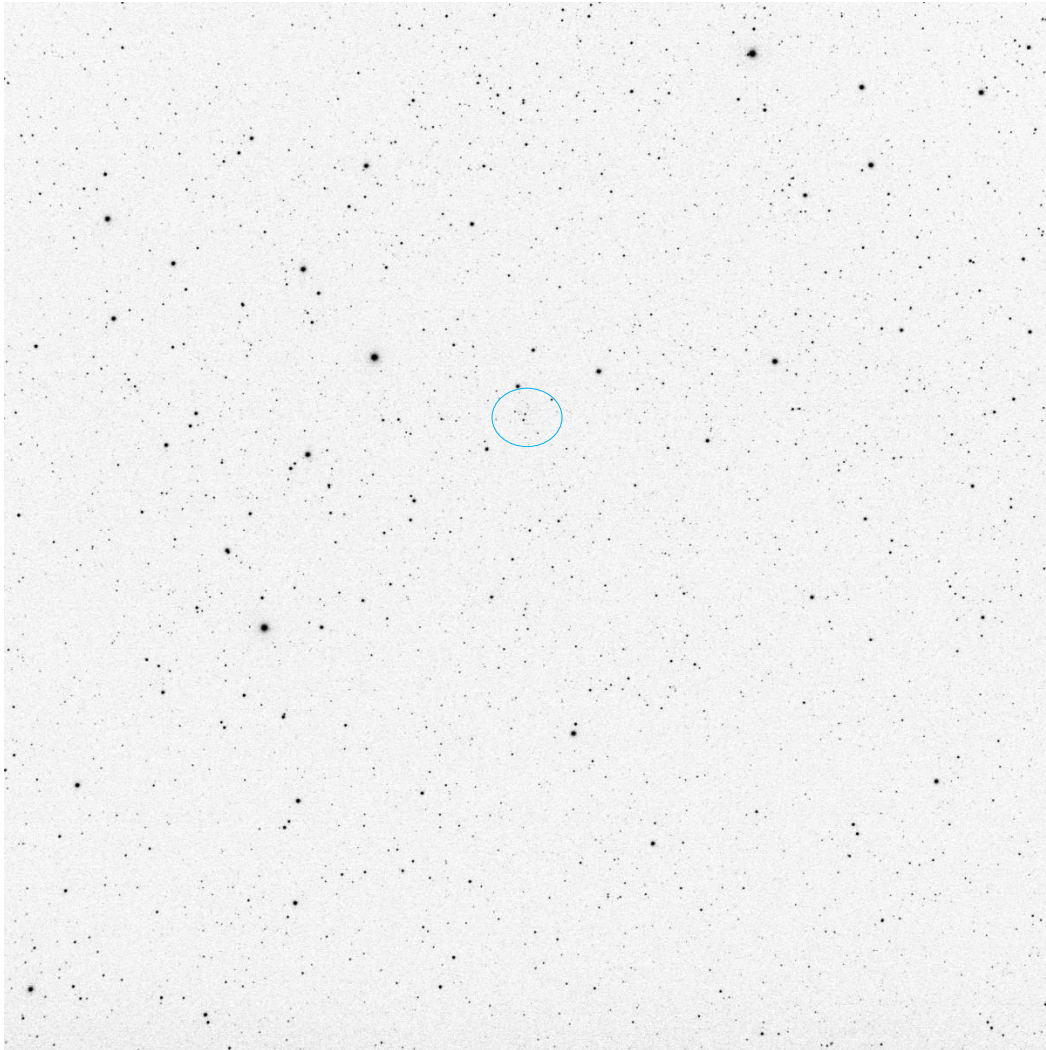

Visual Description      Small cluster, not well detached, somewhat concentrated. Cluster consists of 6 brighter members and < 30 fainter ones.

# Observation Log Sheet

Object	<b>Berkely 2</b>	Date	10/21/23
Right Ascension (2000)	00h25m18s	Time	20:53
Declination (2000)	+60°24'00"	Sky: Transparency	Above Average
Constellation	Cassiopeia	Seeing	Above Average
Magnitude	11.8	Location	West Columbia TX
Angular Diameter (')	2.0	Instrument	Astro Tech AT80ED
Concentration Class	IV-1-p	Camera	ZWO ASI183MC
Distance (ly)	17000	Sub Exposure (sec)	15
Diameter (ly)	10	Total Exposure (min)	4.0
		Image Software	SharpCap 4.0

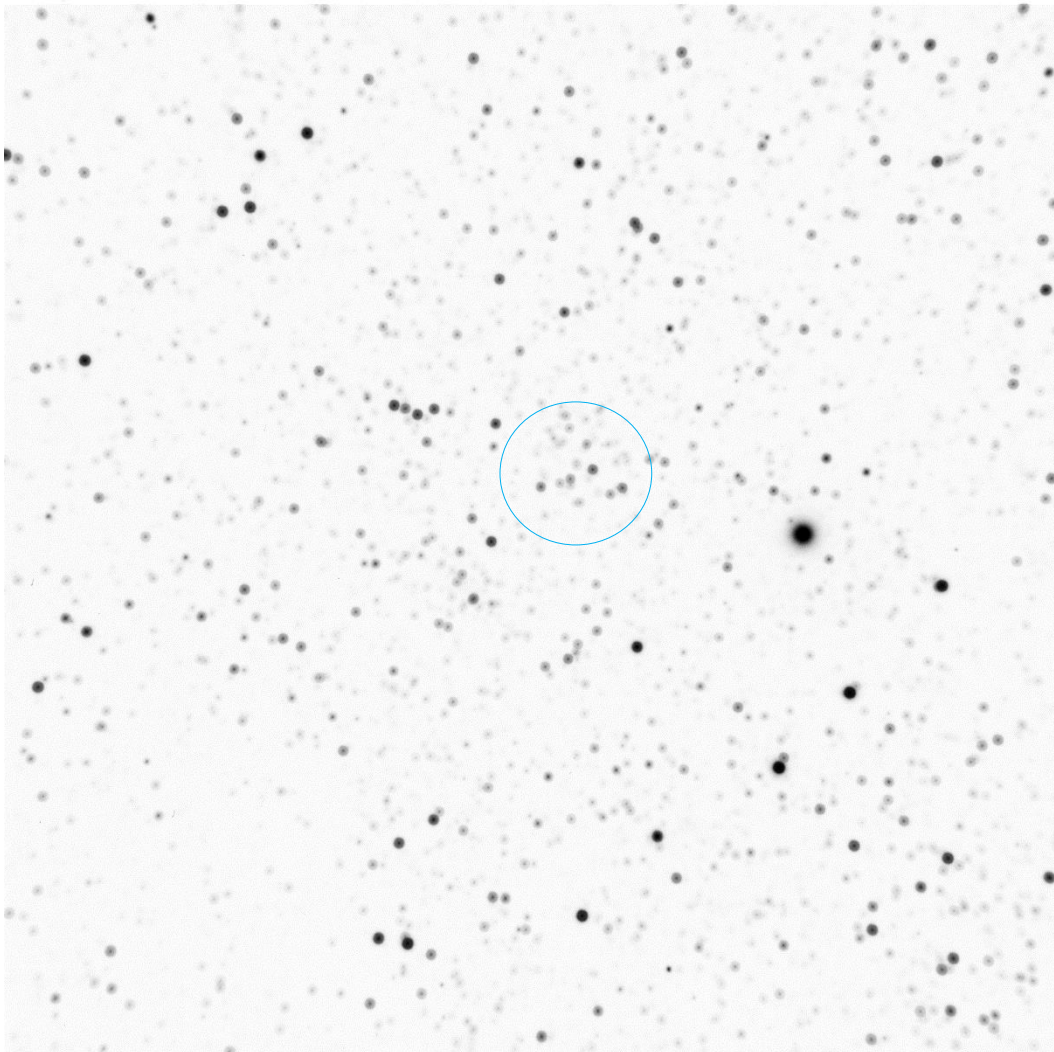

Visual Description      A very tiny cluster. Not detached but strong field concentration.

# Observation Log Sheet

Object	<b>King 14</b>	Date	12/16/23
Right Ascension (2000)	00h31m54s	Time	20:20
Declination (2000)	+63°10'45"	Sky: Transparency	Average
Constellation	Cassiopeia	Seeing	Average
Magnitude	8.9	Location	West Columbia TX
Angular Diameter (')	6.1	Instrument	Astro Tech AT80ED
Concentration Class	IV-2-p (III-2-p)	Camera	ZWO ASI533MC Pro
Distance (ly)	8500	Sub Exposure (sec)	15
Diameter (ly)	15	Total Exposure (min)	3.25
		Image Software	SharpCap 4.0

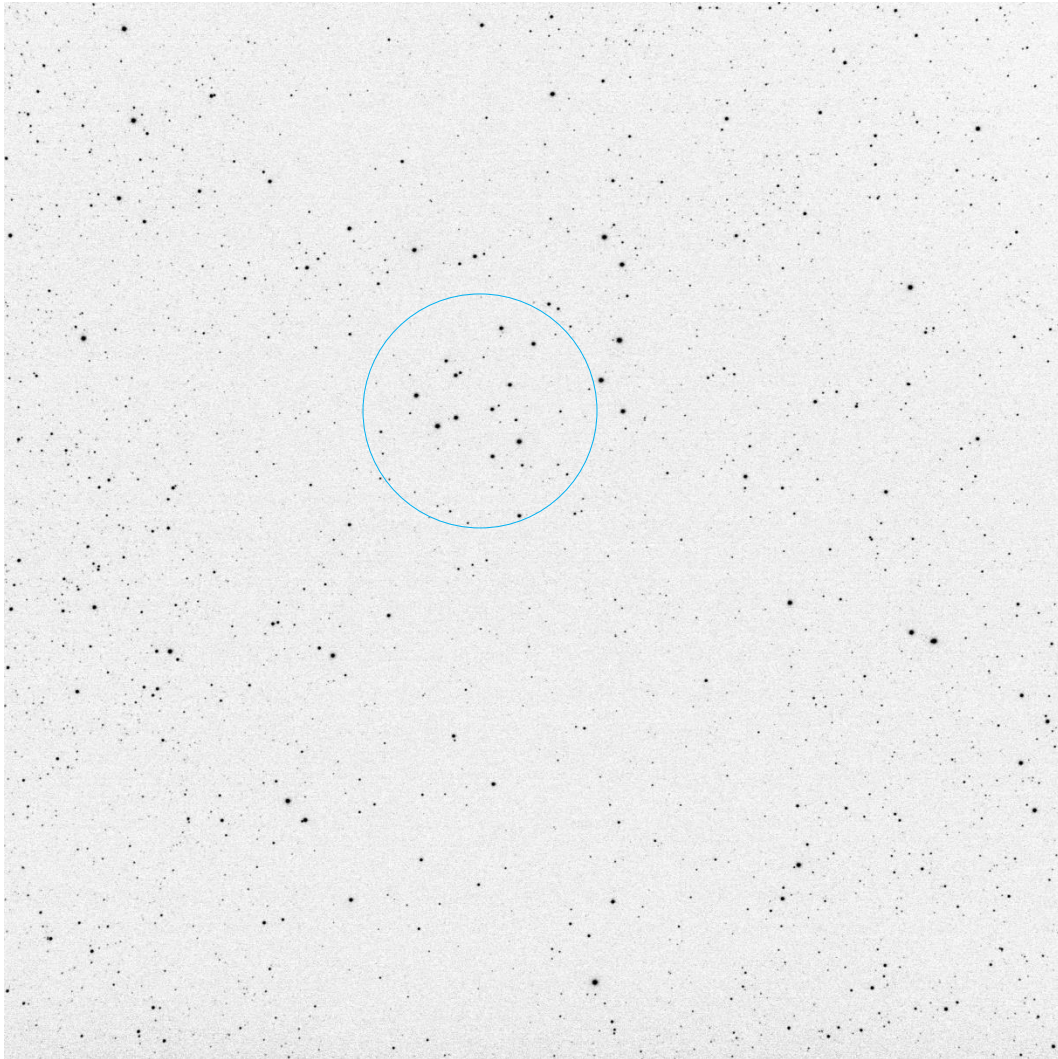

Visual Description      Faint and not well detached, little concentration. Less than 50 stars of moderate range in brightness.

# Observation Log Sheet

Object	<b>NGC 225</b>	Date	10/21/23
Right Ascension (2000)	00h43m39s	Time	20:58
Declination (2000)	+61°48'30"	Sky: Transparency	Above Average
Constellation	Cassiopeia	Seeing	Above Average
Magnitude	8.1	Location	West Columbia TX
Angular Diameter (')	12	Instrument	Astro Tech AT80ED
Concentration Class	III-1-p (III-1-p)	Camera	ZWO ASI183MC
Distance (ly)	2100	Sub Exposure (sec)	15
Diameter (ly)	8	Total Exposure (min)	4.25
		Image Software	SharpCap 4.0

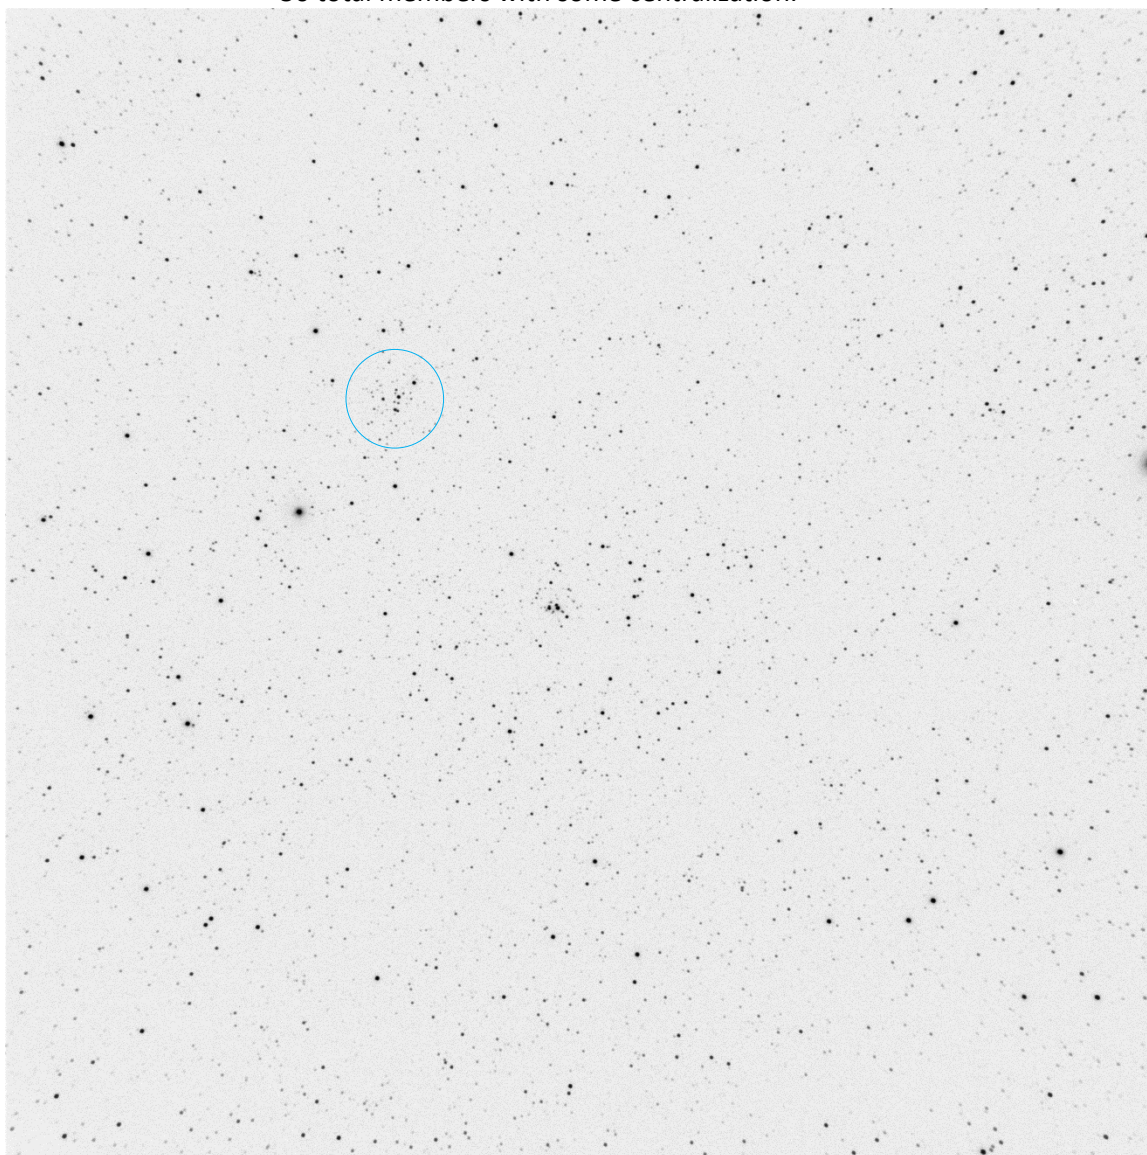

Visual Description      A medium sized cluster of about 20 bright stars. No strong centralization.

## Robert Wood's Astronomical League Observation Record – Open Clusters

Object	<b>King 16</b>	Date	1/29/24
Right Ascension (2000)	00h45m06s	Time	19:38
Declination (2000)	+64°19'08"	Sky: Transparency	Below Average
Constellation	Cassiopeia	Seeing	Average
Magnitude	9.2	Location	West Columbia TX
Angular Diameter (')	5	Instrument	Astro Tech AT80ED
Concentration Class	II-3-p	Camera	ZWO ASI533MC Pro
Distance (ly)	7500	Sub Exposure (sec)	15
Diameter (ly)	11	Total Exposure (min)	5.0
		Image Software	SharpCap 4.0

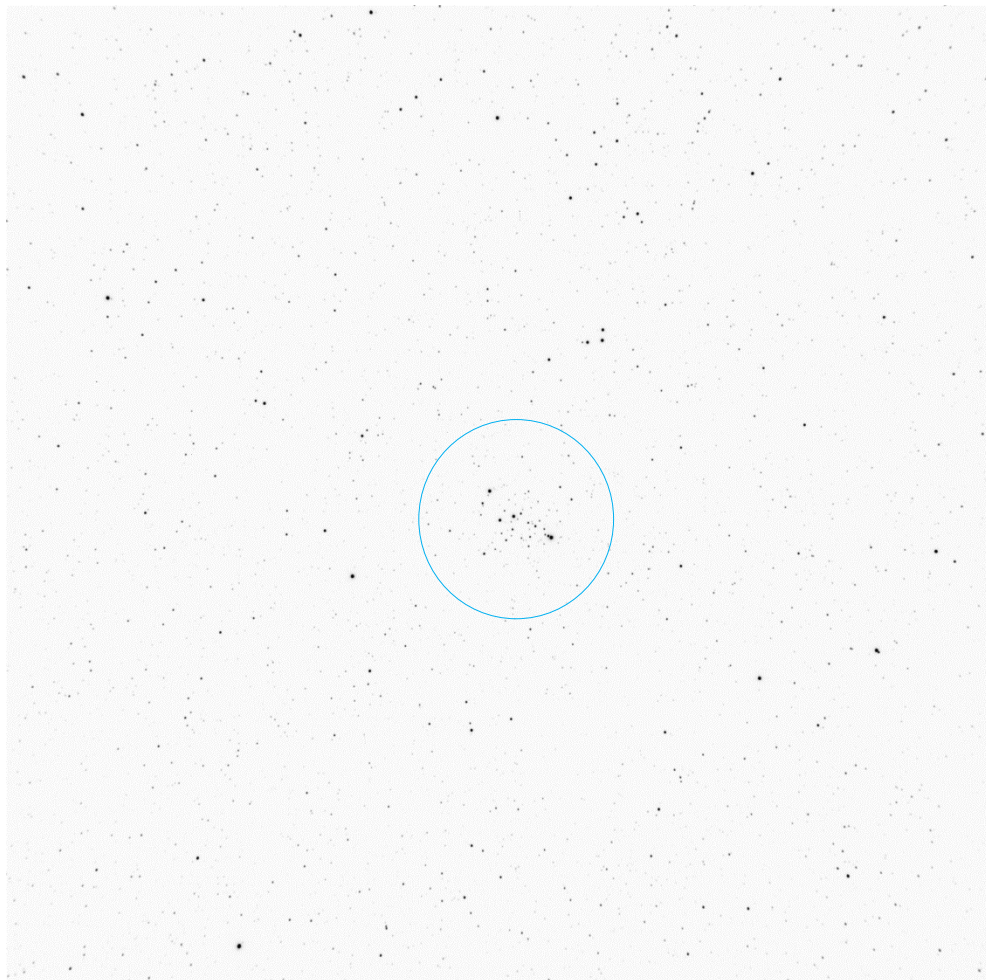

Visual Description      Small cluster with the 4 brighter members forming an arrowhead. Less than 50 total members with some centralization.

# Observation Log Sheet

Object	<b>M103</b>	Date	12/10/23
Right Ascension (2000)	01h34m59s	Time	16:11
Declination (2000)	+60°46'36"	Sky: Transparency	Average
Constellation	Cassiopeia	Seeing	Average
Magnitude	6.6	Location	West Columbia TX
Angular Diameter (')	5.0	Instrument	Astro Tech AT80ED
Concentration Class	II-3-p (III-2-p)	Camera	ZWO ASI533MC Pro
Distance (ly)	7200	Sub Exposure (sec)	15
Diameter (ly)	10	Total Exposure (min)	6.75
		Image Software	SharpCap 4.0

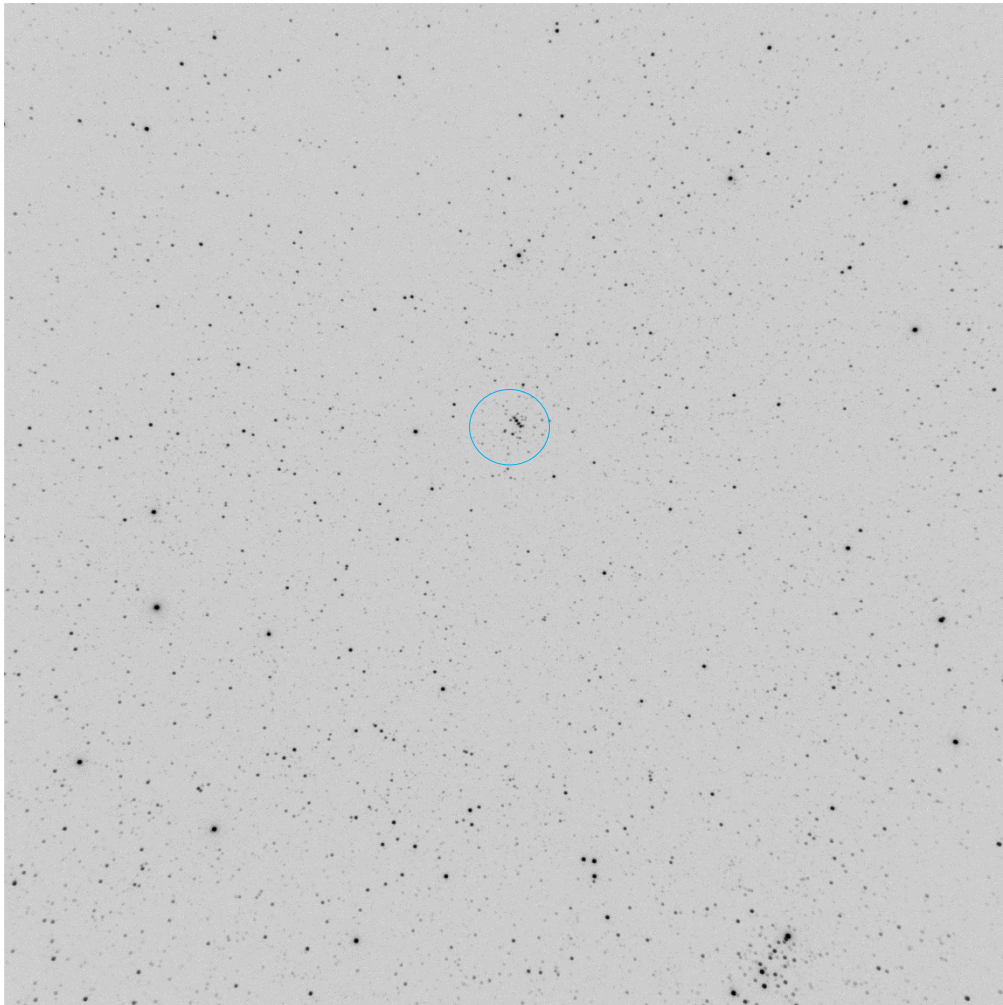

Visual Description      A small triangular shaped cluster of less than 50 stars. Half a dozen brighter members and the remainder fainter. Detached and some concentration.

# Observation Log Sheet

Object	<b>Collinder 15</b>	Date	12/18/23
Right Ascension (2000)	01h35m42s	Time	19:06
Declination (2000)	+61°17'00"	Sky: Transparency	Average
Constellation	Cassiopeia	Seeing	Average
Magnitude	10.0	Location	West Columbia TX
Angular Diameter (')	3.0	Instrument	Astro Tech AT80ED
Concentration Class	II-1-p	Camera	ZWO ASI533MC Pro
Distance (ly)	8400	Sub Exposure (sec)	15
Diameter (ly)	7	Total Exposure (min)	5.0
		Image Software	SharpCap 4.0

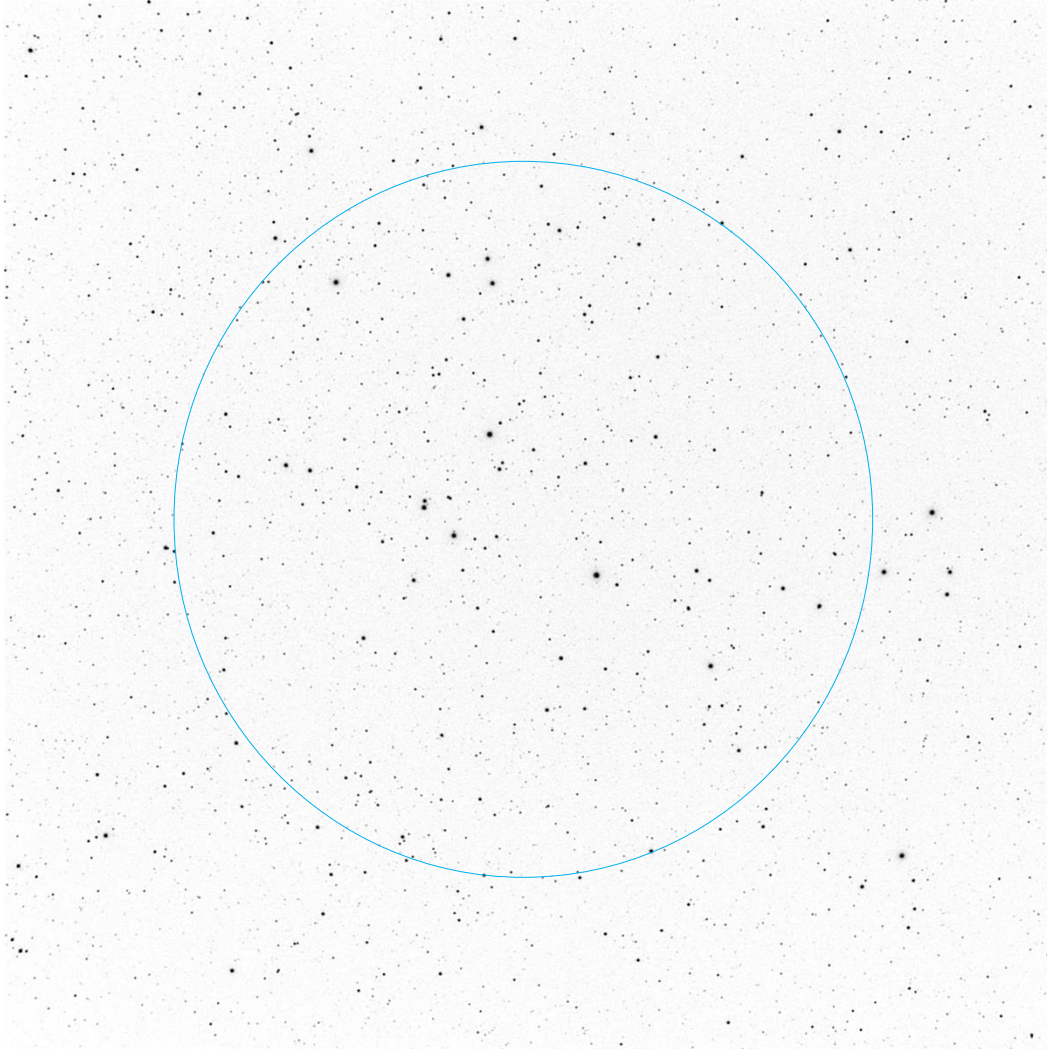

Visual Description      A tiny cluster with 4 brighter stars in a line. Cluster has about a dozen members, some concentration, and some detachment. Messier 103 is to the lower right in the image.

# Observation Log Sheet

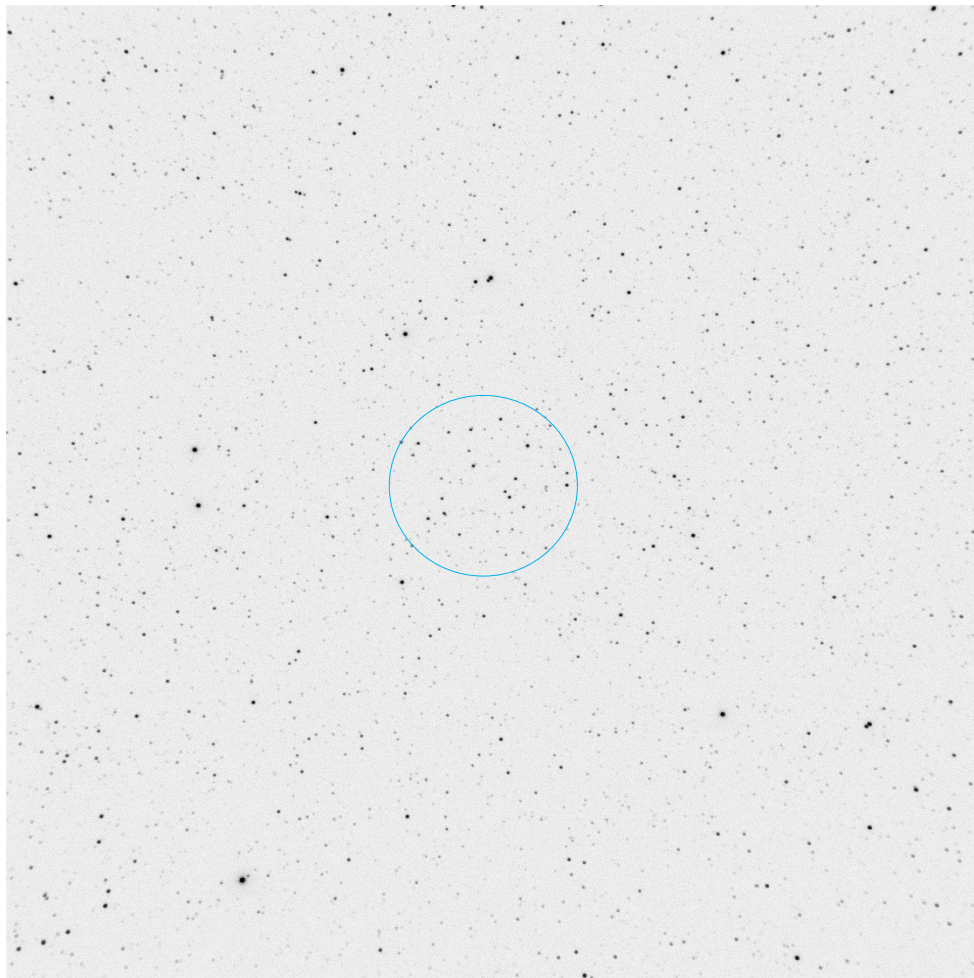

Object	<b>Collinder 463</b>	Date	11/7/24
Right Ascension (2000)	01h47m49s	Time	20:04
Declination (2000)	+71°56'13"	Sky: Transparency	Average
Constellation	Cassiopeia	Seeing	Average
Magnitude	5.1	Location	West Columbia TX
Angular Diameter (')	57	Instrument	Astro Tech AT80ED
Concentration Class	III-2-m	Camera	ZWO ASI533MC Pro
Distance (ly)	2300	Sub Exposure (sec)	15
Diameter (ly)	38	Total Exposure (min)	4
		Image Software	SharpCap 4.0

Visual Description      Large, dispersed open cluster of 50 or more stars. Detached from field.

# Observation Log Sheet

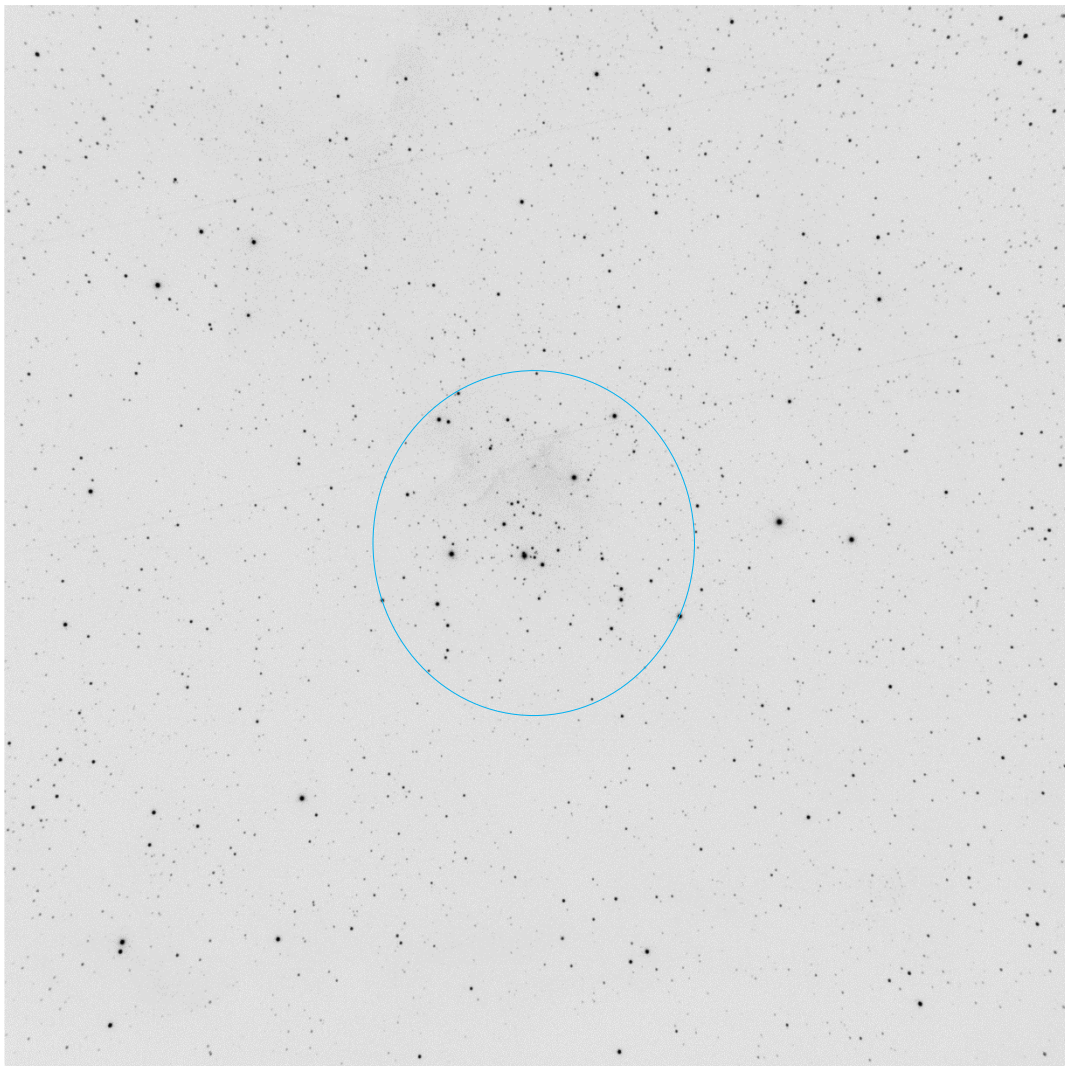

Object	<b>Stock 4</b>	Date	12/18/23
Right Ascension (2000)	01h52m48s	Time	18:59
Declination (2000)	+57°04'00"	Sky: Transparency	Average
Constellation	Perseus	Seeing	Average
Magnitude	7.7	Location	West Columbia TX
Angular Diameter (')	12	Instrument	Astro Tech AT80ED
Concentration Class	IV-1-p	Camera	ZWO ASI533MC Pro
Distance (ly)	5000	Sub Exposure (sec)	15
Diameter (ly)	18	Total Exposure (min)	7.45
		Image Software	SharpCap 4.0
Visual Description	A small cluster containing less than 50 stars of similar brightness, not well detached or centralized.		

# Observation Log Sheet

Object	<b>IC 1805</b>	Date	12/10/23
Right Ascension (2000)	02h34m33s	Time	18:45
Declination (2000)	+61°31'32"	Sky: Transparency	Average
Constellation	Cassiopeia	Seeing	Average
Magnitude	6.1	Location	West Columbia TX
Angular Diameter (')	20	Instrument	Astro Tech AT80ED
Concentration Class	I-2-m-n (III-3-p)	Camera	ZWO ASI533MC Pro
Distance (ly)	6100	Sub Exposure (sec)	15
Diameter (ly)	36	Total Exposure (min)	8.25
		Image Software	SharpCap 4.0

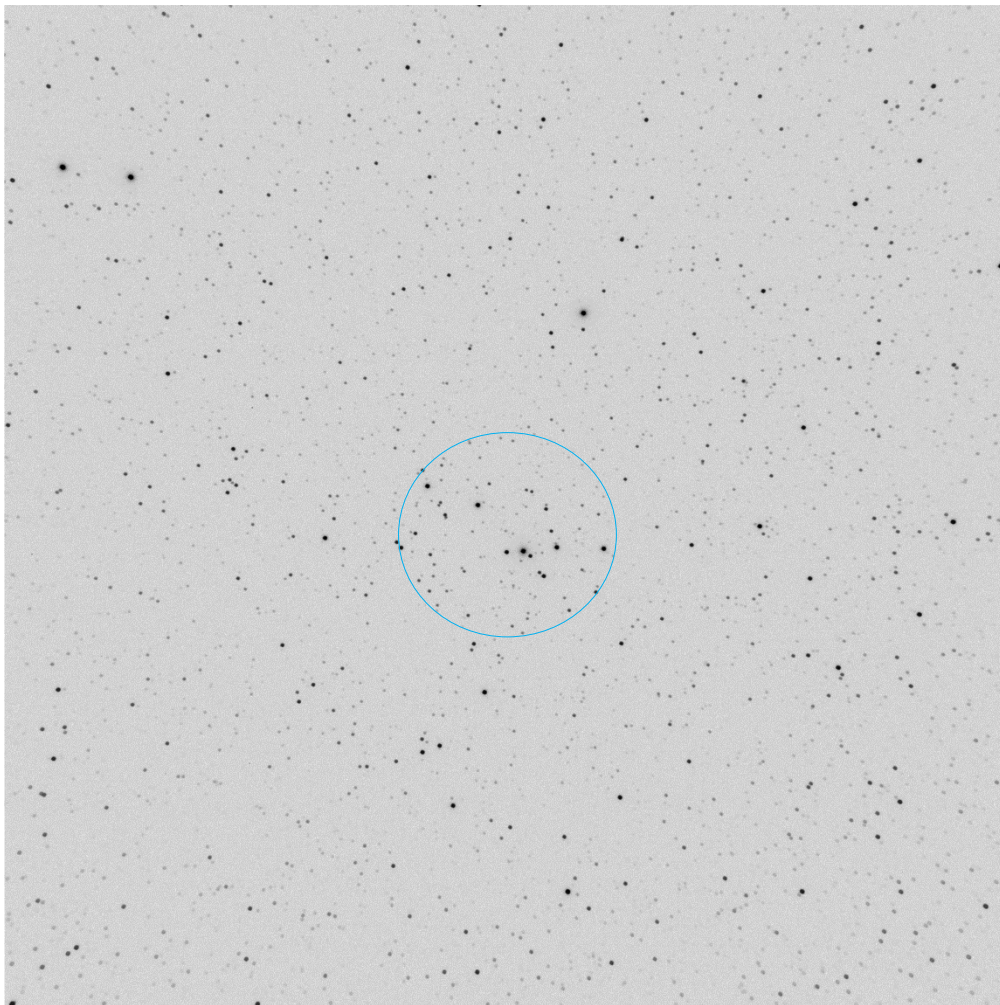

Visual Description      A fine medium sized cluster embedded in some nebulosity. More than 50 stars of varying brightness. Cluster well detached and somewhat concentrated.

# Observation Log Sheet

Object	<b>Collinder 29</b>	Date	12/17/23
Right Ascension (2000)	02h36m53s	Time	19:38
Declination (2000)	+55°54'54"	Sky: Transparency	Average
Constellation	Perseus	Seeing	Average
Magnitude	6.6	Location	West Columbia TX
Angular Diameter (')	17	Instrument	Astro Tech AT80ED
Concentration Class	II-3-p	Camera	ZWO ASI533MC Pro
Distance (ly)	2100	Sub Exposure (sec)	15
Diameter (ly)	10	Total Exposure (min)	4.0
		Image Software	SharpCap 4.0

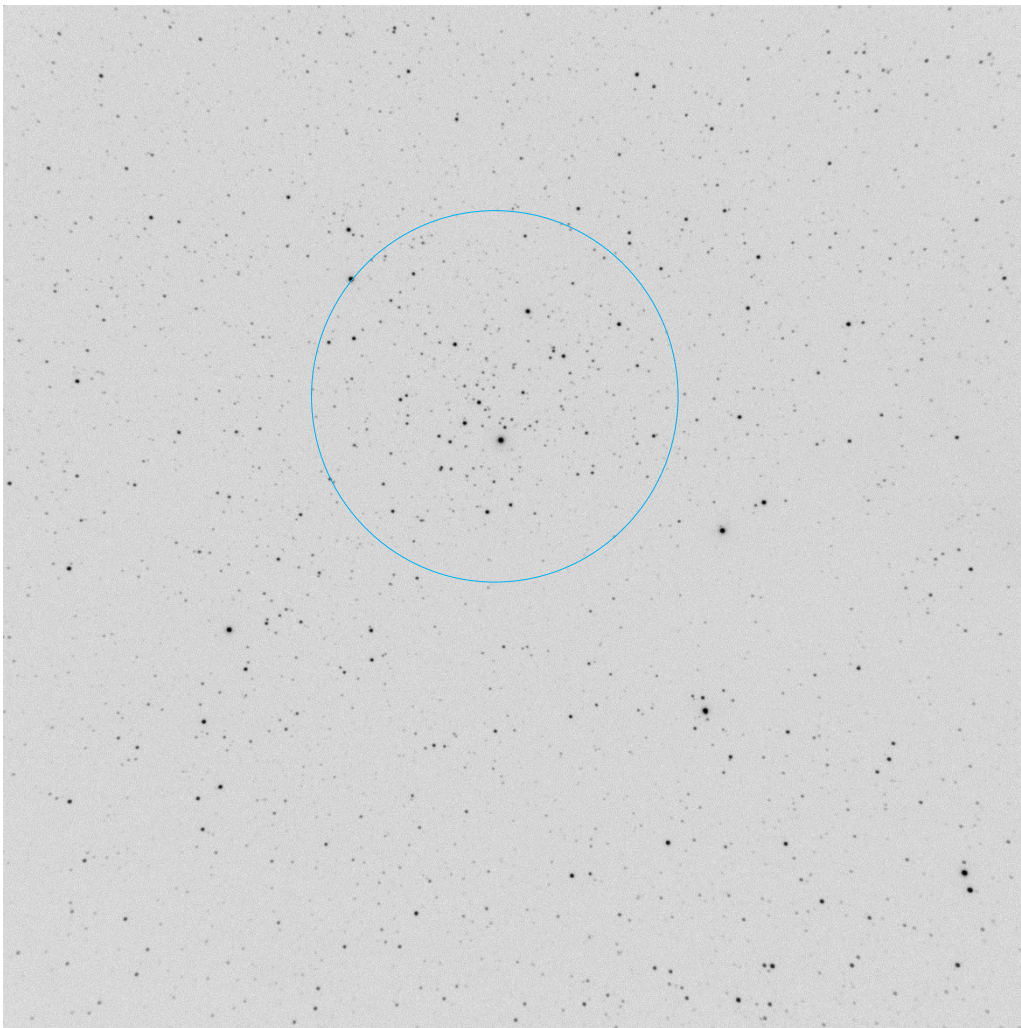

Visual Description      A small cluster containing about a dozen brighter stars and twice that many fainter ones. Somewhat detached with little centralization.

# Observation Log Sheet

Object	<b>NGC 1027</b>	Date	12/18/23
Right Ascension (2000)	02h42m40s	Time	19:14
Declination (2000)	+61°35'42"	Sky: Transparency	Average
Constellation	Cassiopeia	Seeing	Average
Magnitude	6.2	Location	West Columbia TX
Angular Diameter (')	20	Instrument	Astro Tech AT80ED
Concentration Class	II-2-m (III-2-p)	Camera	ZWO ASI533MC Pro
Distance (ly)	2500	Sub Exposure (sec)	15
Diameter (ly)	15	Total Exposure (min)	6.0
		Image Software	SharpCap 4.0

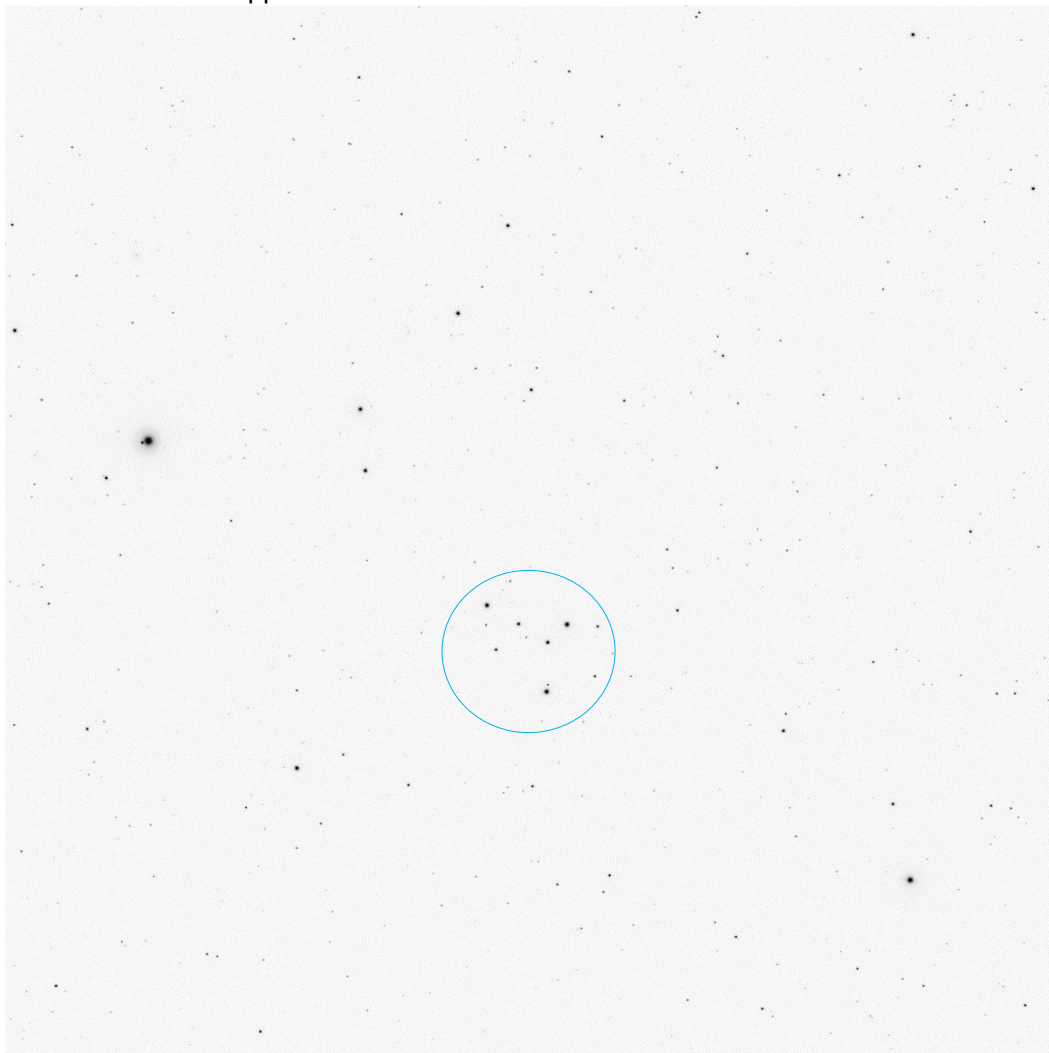

Visual Description      A medium sized cluster with 50+ members of varying brightness. Good detachment and centralization.

# Observation Log Sheet

Object	<b>Dol-Dzim 1</b>	Date	1/9/24
Right Ascension (2000)	02h47m30s	Time	19:13
Declination (2000)	+17°16'00"	Sky: Transparency	Above Average
Constellation	Aries	Seeing	Below Average
Magnitude	8.0	Location	West Columbia TX
Angular Diameter (')	14	Instrument	Astro Tech AT80ED
Concentration Class	III-3-p	Camera	ZWO ASI533MC Pro
Distance (ly)		Sub Exposure (sec)	15
Diameter (ly)		Total Exposure (min)	7.0
		Image Software	SharpCap 4.0

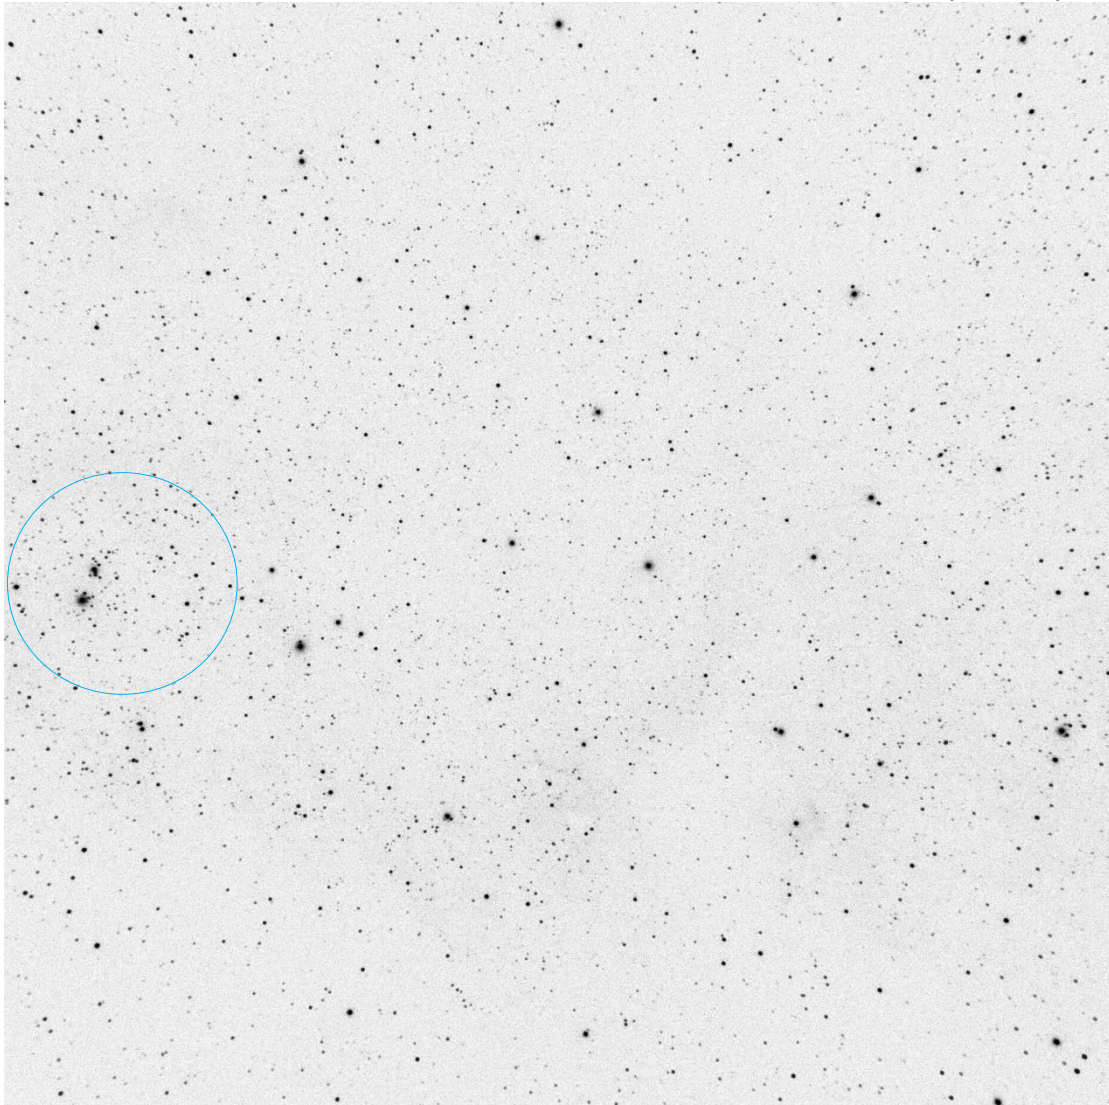

Visual Description      A small cluster consisting of 5 brighter stars and a similar number of fainter ones. Well detached, but not centralized. Pi Aries is in the frame to the upper left.

# Observation Log Sheet

Object	<b>IC1848 (Soul Nebula)</b>	Date	1/29/24
Right Ascension (2000)	02h51m12s	Time	19:56
Declination (2000)	+60°26'00"	Sky: Transparency	Below Average
Constellation	Cassiopeia	Seeing	Average
Magnitude	6.20	Location	West Columbia TX
Angular Diameter (')	18	Instrument	Astro Tech AT80ED
Concentration Class	IV-2-p-n (IV-3-p-n)	Camera	ZWO ASI533MC Pro
Distance (ly)	6500	Sub Exposure (sec)	15
Diameter (ly)	34	Total Exposure (min)	5.0
		Image Software	SharpCap 4.0

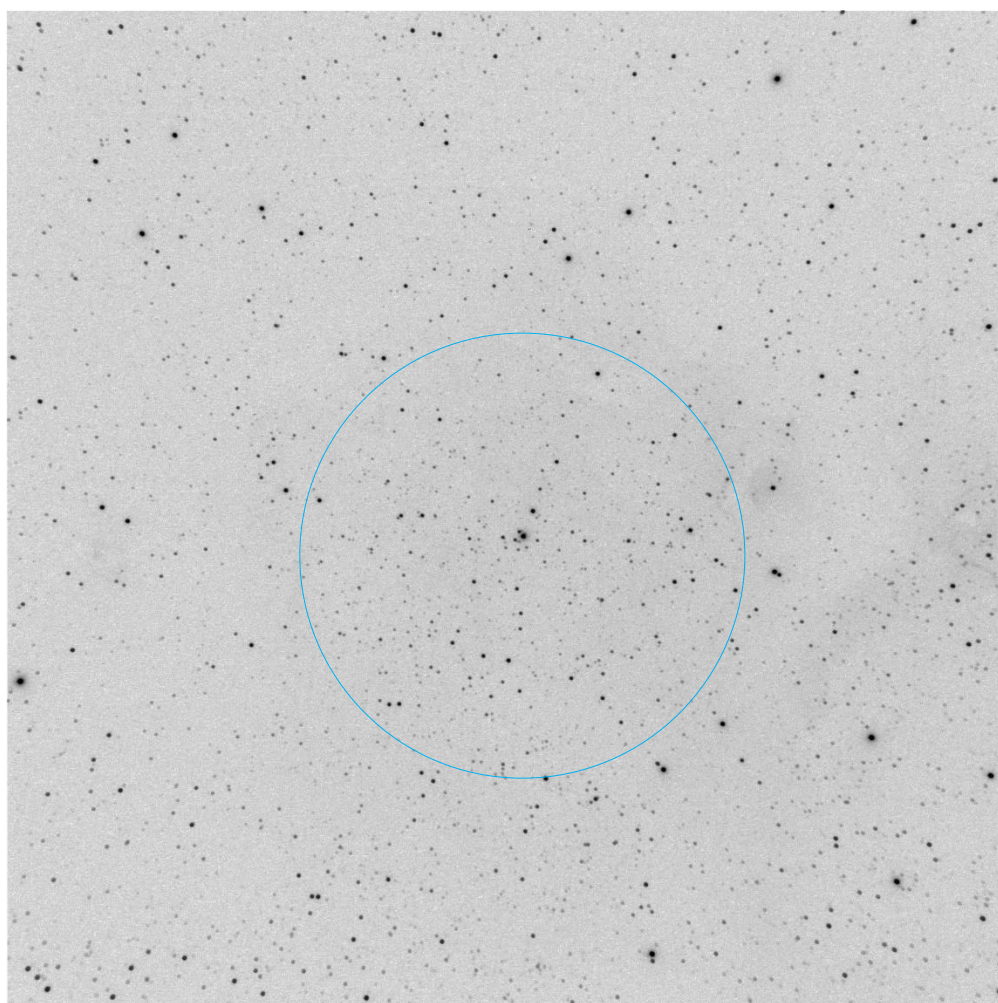

Visual Description Medium cluster with the 2 brighter members. Less than 50 total members with some centralization but not well detached. Nebulosity is barely visible.

# Observation Log Sheet

Object	<b>Collinder 34</b>	Date	12/17/23
Right Ascension (2000)	02h59m23s	Time	19:32
Declination (2000)	+60°34'25"	Sky: Transparency	Average
Constellation	Cassiopeia	Seeing	Average
Magnitude	6.8	Location	West Columbia TX
Angular Diameter (')	25	Instrument	Astro Tech AT80ED
Concentration Class	III-2-m	Camera	ZWO ASI533MC Pro
Distance (ly)		Sub Exposure (sec)	15
Diameter (ly)		Total Exposure (min)	6.0
		Image Software	SharpCap 4.0

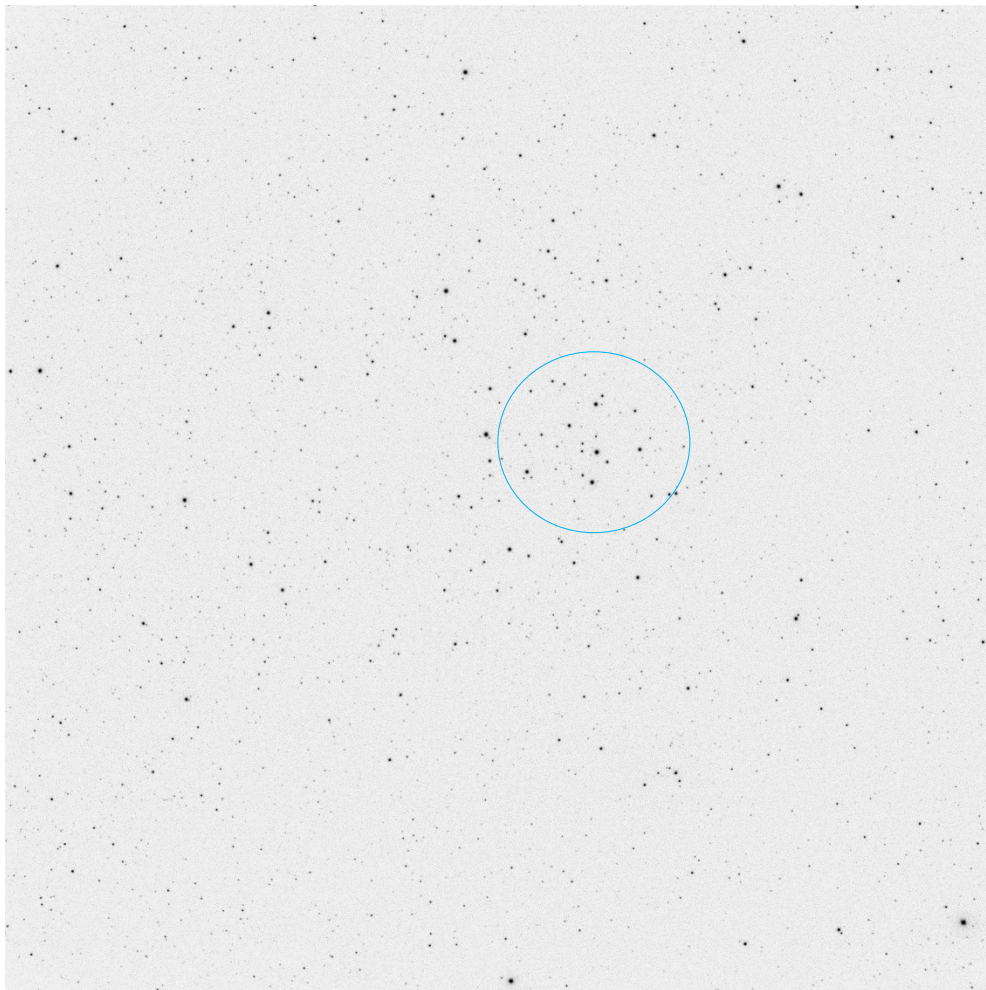

Visual Description      A large cluster within the Soul Nebula. There are 50+ members, widely spread out with a handful of brighter members. Not well detached from field.

# Observation Log Sheet

Object	<b>Collinder 36</b>	Date	1/9/24
Right Ascension (2000)	03h11m48s	Time	19:45
Declination (2000)	+63°15'00"	Sky: Transparency	Above Average
Constellation	Cassiopeia	Seeing	Below Average
Magnitude	7.6	Location	West Columbia TX
Angular Diameter (')	14	Instrument	Astro Tech AT80ED
Concentration Class	II-2-p	Camera	ZWO ASI533MC Pro
Distance (ly)	2700	Sub Exposure (sec)	15
Diameter (ly)	11	Total Exposure (min)	5.0
		Image Software	SharpCap 4.0

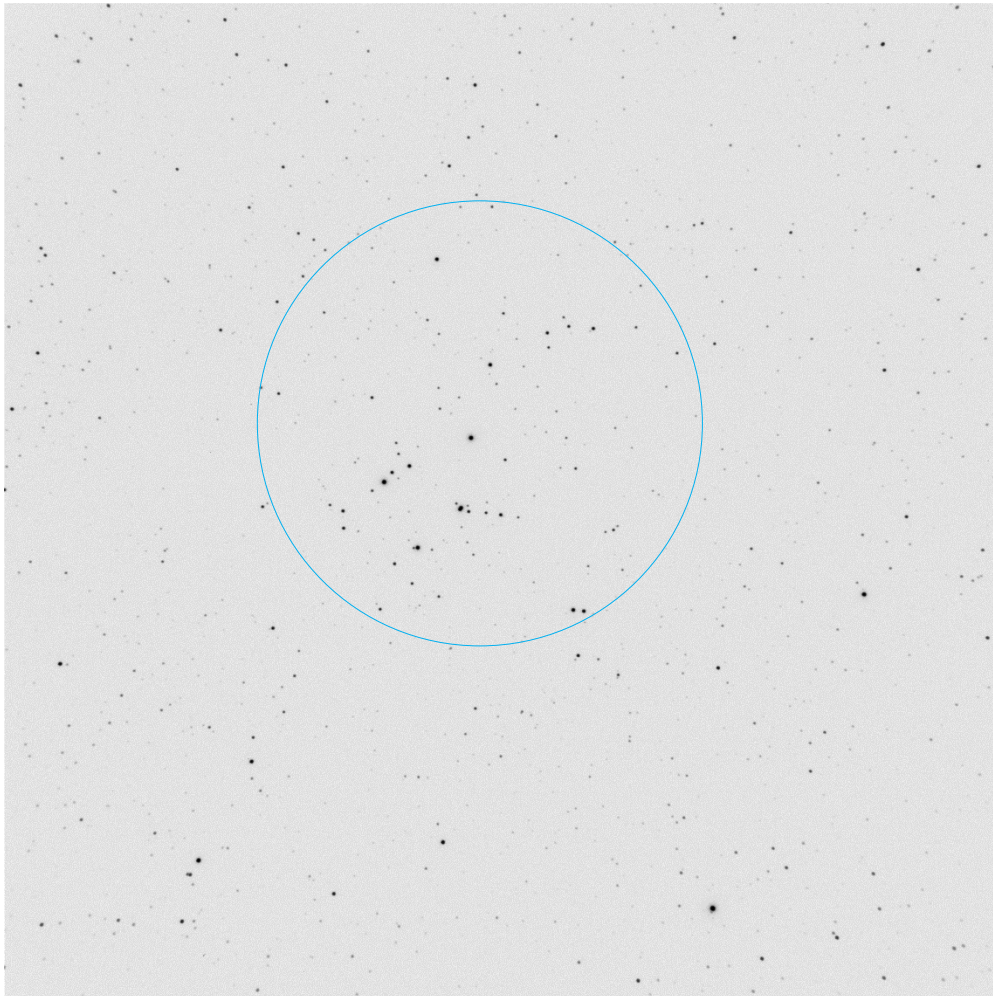

Visual Description      Medium sized cluster made up of three brighter stars in a line surrounded by less than 50 fainter ones of varying brightness. Detached with some central concentration.

# Observation Log Sheet

Object	<b>Pazimo's Cluster</b>	Date	12/18/23
Right Ascension (2000)	03h16m11s	Time	19:20
Declination (2000)	+60°06'56"	Sky: Transparency	Average
Constellation	Camelopardalis	Seeing	Average
Magnitude	5.9	Location	West Columbia TX
Angular Diameter (')	29	Instrument	Astro Tech AT80ED
Concentration Class	III-3-p (III-3-p)	Camera	ZWO ASI533MC Pro
Distance (ly)	3300	Sub Exposure (sec)	15
Diameter (ly)	28	Total Exposure (min)	6.0
		Image Software	SharpCap 4.0

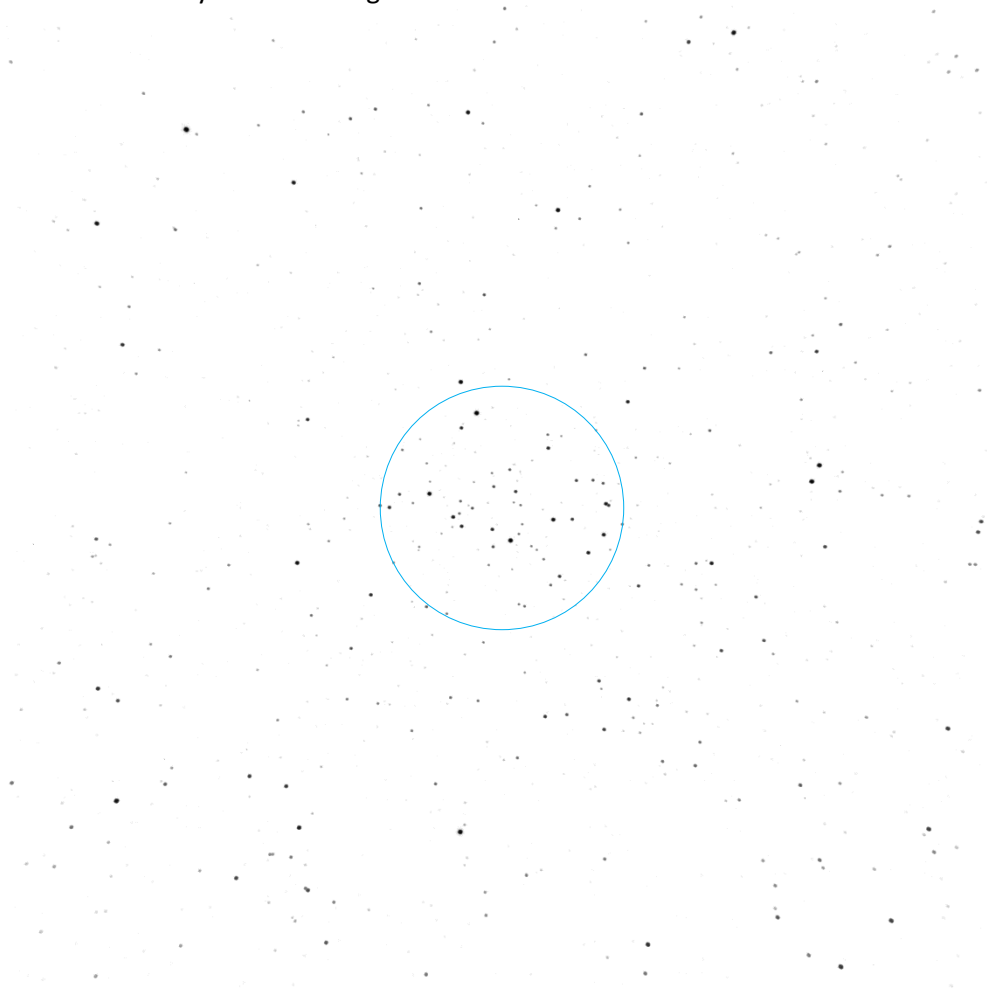

Visual Description      A large cluster with less than 50 members dominated by a half dozen brighter members. Cluster composed of brighter and fainter members, somewhat detached and poorly concentrated.

# Observation Log Sheet

Object	<b>NGC 1342</b>	Date	1/9/24
Right Ascension (2000)	03h31m38s	Time	18:48
Declination (2000)	+37°22'36"	Sky: Transparency	Above Average
Constellation	Perseus	Seeing	Below Average
Magnitude	6.8	Location	West Columbia TX
Angular Diameter (')	15	Instrument	Astro Tech AT80ED
Concentration Class	II-2-m (III-3-p)	Camera	ZWO ASI533MC Pro
Distance (ly)	2200	Sub Exposure (sec)	15
Diameter (ly)	10	Total Exposure (min)	6.25
		Image Software	SharpCap 4.0

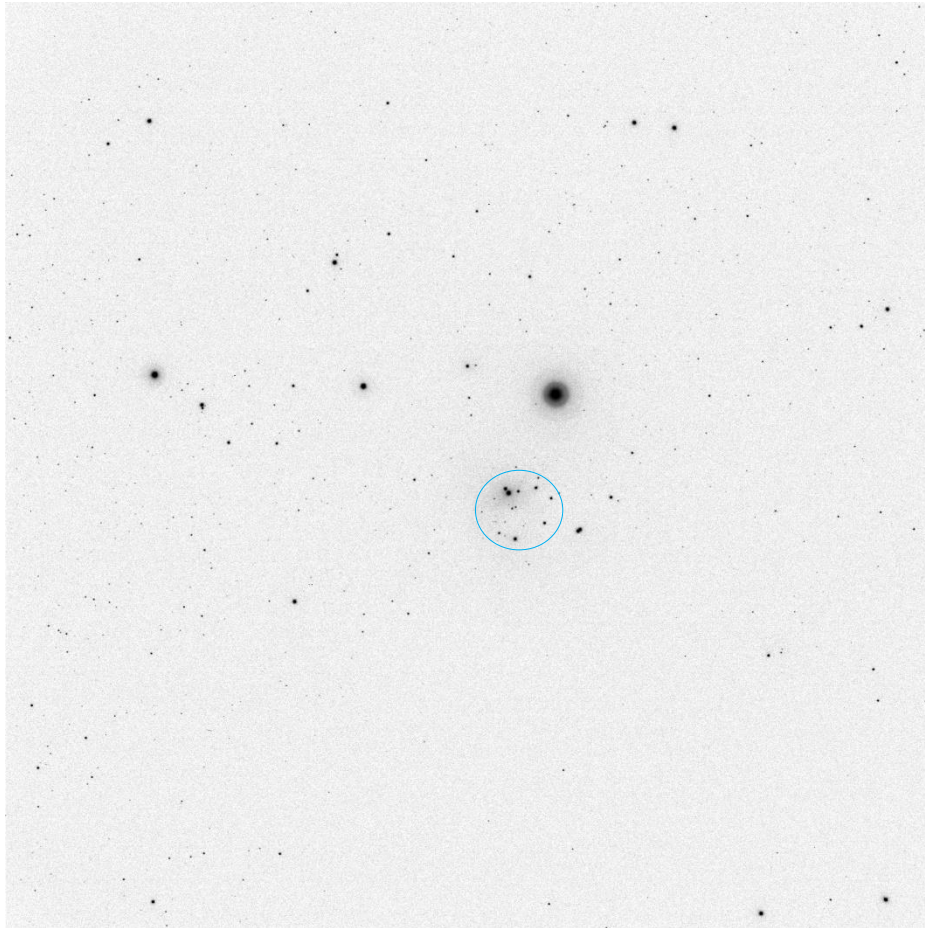

Visual Description      A medium cluster with more than 50 members of varying brightnesses, detached and loosely concentrated. Star colors range from green through yellow to orange.

# Observation Log Sheet

Object	<b>IC 348</b>	Date	1/9/24
Right Ascension (2000)	03h44m36s	Time	19:04
Declination (2000)	+32°10'00"	Sky: Transparency	Above Average
Constellation	Perseus	Seeing	Below Average
Magnitude	5	Location	West Columbia TX
Angular Diameter (')	8.0	Instrument	Astro Tech AT80ED
Concentration Class	I-3-p	Camera	ZWO ASI533MC Pro
Distance (ly)		Sub Exposure (sec)	15
Diameter (ly)		Total Exposure (min)	5.0
		Image Software	SharpCap 4.0

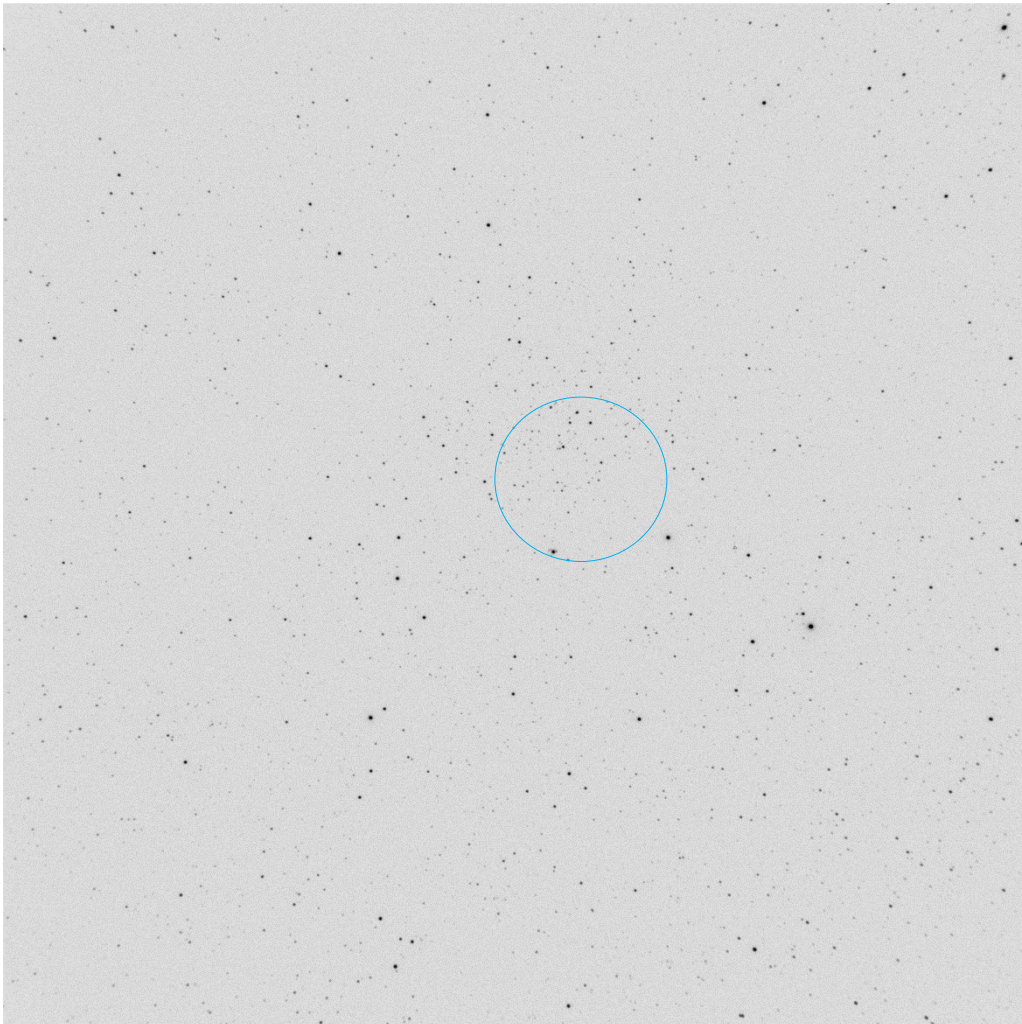

Visual Description      A very small cluster of about 10 stars contained within a reflection nebula. There are 2 brighter stars with the remainder of fainter and similar in brightness. Well detached and some centralization. Bright star above the cluster is Atik, Omicron Per.

# Observation Log Sheet

Object	<b>Tombaugh 5</b>	Date	12/18/23
Right Ascension (2000)	03h47m48s	Time	20:05
Declination (2000)	+59°03'00"	Sky: Transparency	Average
Constellation	Camelopardalis	Seeing	Average
Magnitude	8.6	Location	West Columbia TX
Angular Diameter (')	14	Instrument	Astro Tech AT80ED
Concentration Class	IV-1-p (III-2-m)	Camera	ZWO ASI533MC Pro
Distance (ly)	5900	Sub Exposure (sec)	15
Diameter (ly)	24	Total Exposure (min)	6.25
		Image Software	SharpCap 4.0

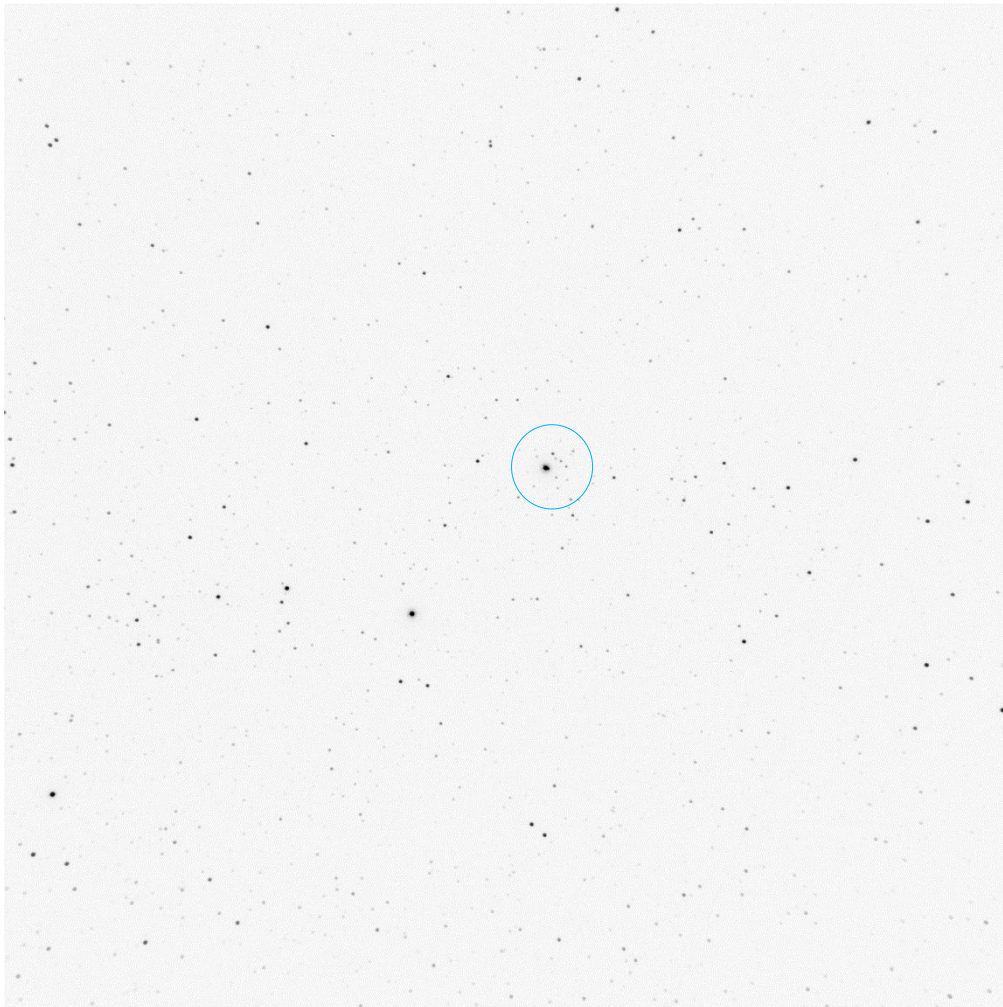

Visual Description      A very small cluster with <50 members. There are four or five brighter ones that stand out. The cluster has minimal concentration and is not well detached from the field stars.

# Observation Log Sheet

Object	<b>NGC 1444</b>	Date	1/9/24
Right Ascension (2000)	03h51m15s	Time	18:40
Declination (2000)	+52°44'05"	Sky: Transparency	Average
Constellation	Perseus	Seeing	Below Average
Magnitude	6.0	Location	West Columbia TX
Angular Diameter (')	4	Instrument	Astro Tech AT80ED
Concentration Class	II-3-p (IV-1-p)	Camera	ZWO ASI533MC Pro
Distance (ly)	3900	Sub Exposure (sec)	15
Diameter (ly)	4	Total Exposure (min)	8.0
		Image Software	SharpCap 4.0

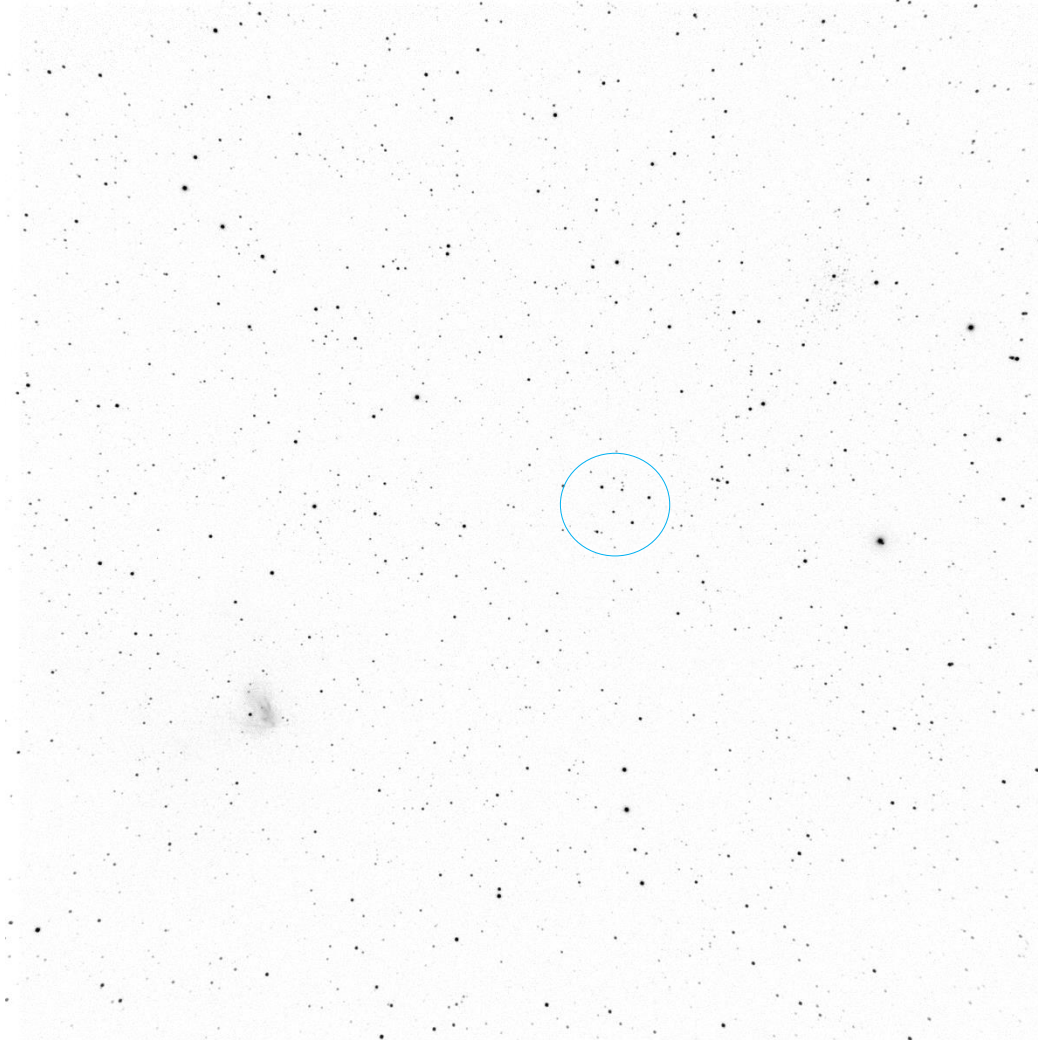

Visual Description      A very small cluster with about a dozen visible members, including 4 of similar brightness that form a straight line. The cluster has some concentration and is somewhat detached from the field stars.

# Observation Log Sheet

Object	<b>King 7</b>	Date	1/29/24
Right Ascension (2000)	03h59m00s	Time	19:28
Declination (2000)	+51°48'00"	Sky: Transparency	Below Average
Constellation	Perseus	Seeing	Average
Magnitude	10.4	Location	West Columbia TX
Angular Diameter (')	7.0	Instrument	Astro Tech AT80ED
Concentration Class	II-3-p	Camera	ZWO ASI533MC Pro
Distance (ly)	7200	Sub Exposure (sec)	15
Diameter (ly)	15	Total Exposure (min)	5.0
		Image Software	SharpCap 4.0

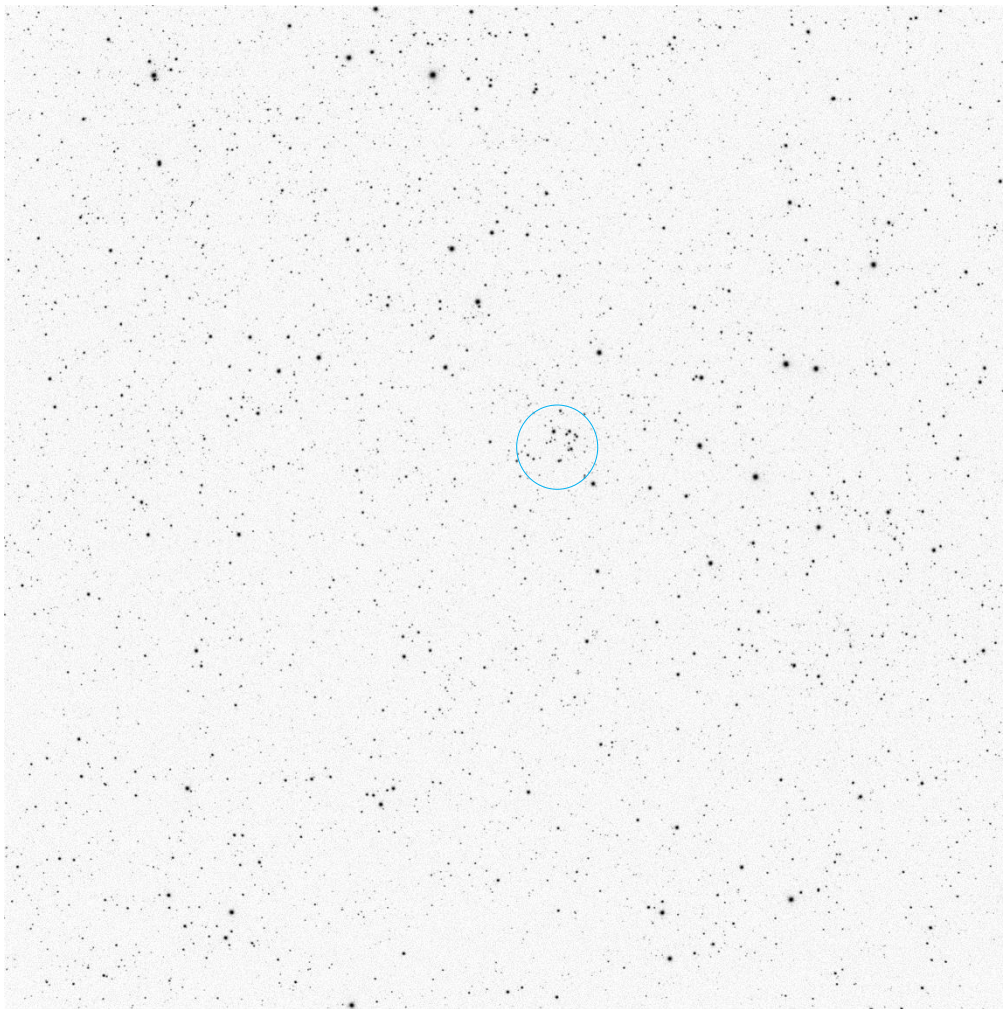

Visual Description      A small cluster, difficult to identify. Has 2 brighter members and 6 fainter ones. Small reflection nebula, GM 1-34 visible to the lower left in the image.

# Observation Log Sheet

Object	<b>NGC 1496</b>	Date	1/9/24
Right Ascension (2000)	04h04m32s	Time	19:38
Declination (2000)	+52°39'42"	Sky: Transparency	Average
Constellation	Perseus	Seeing	Below Average
Magnitude	9.8	Location	West Columbia TX
Angular Diameter (')	4.0	Instrument	Astro Tech AT80ED
Concentration Class	II-3-p	Camera	ZWO ASI533MC Pro
Distance (ly)	4000	Sub Exposure (sec)	15
Diameter (ly)	5	Total Exposure (min)	6.0
		Image Software	SharpCap 4.0

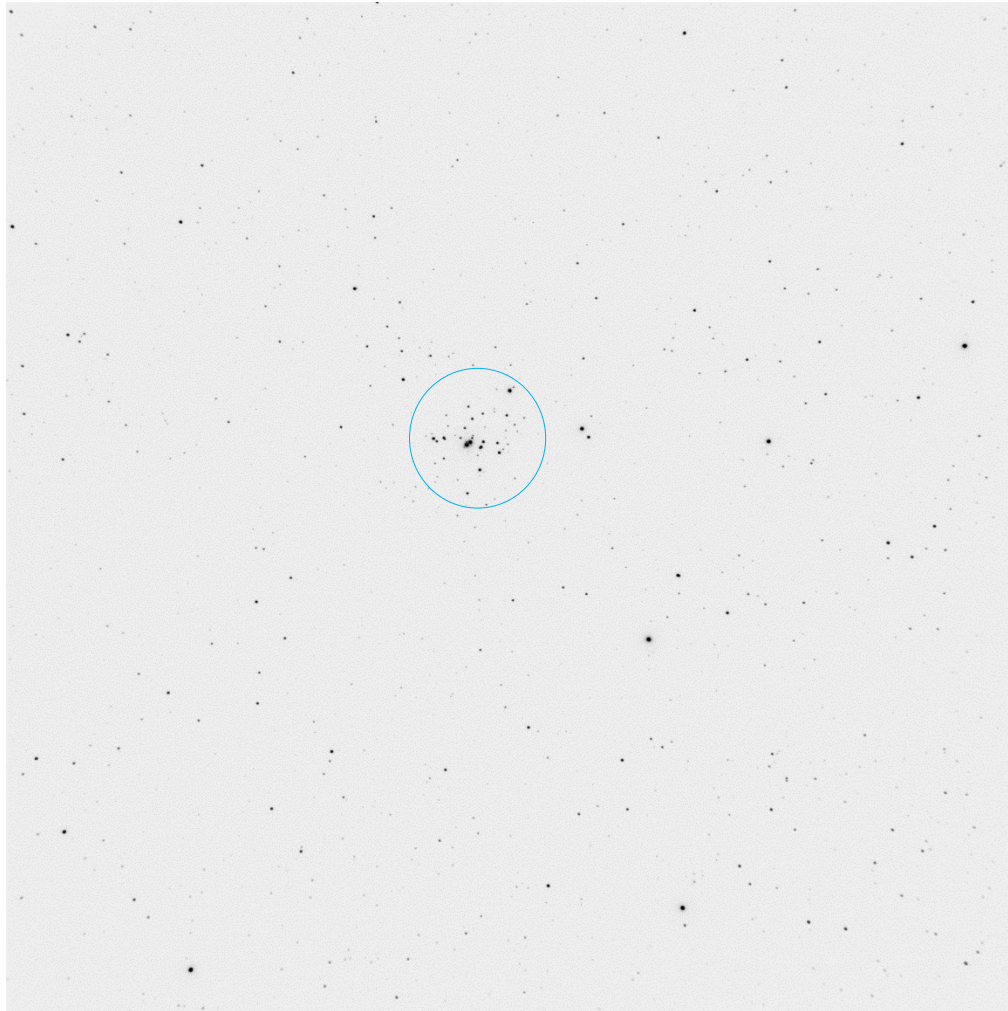

Visual Description      A tiny cluster with 5 brighter members making a "V" shape and another 20 or so fainter ones. Somewhat detached with some concentration.

# Observation Log Sheet

Object	<b>Golden Harp Cluster</b>	Date	12/18/23
Right Ascension (2000)	04h07m50s	Time	19:41
Declination (2000)	+62°19'54"	Sky: Transparency	Average
Constellation	Camelopardalis	Seeing	Average
Magnitude	5.3	Location	West Columbia TX
Angular Diameter (')	8.0	Instrument	Astro Tech AT80ED
Concentration Class	III-3-p	Camera	ZWO ASI533MC Pro
Distance (ly)	2700	Sub Exposure (sec)	15
Diameter (ly)	6	Total Exposure (min)	5.0
		Image Software	SharpCap 4.0

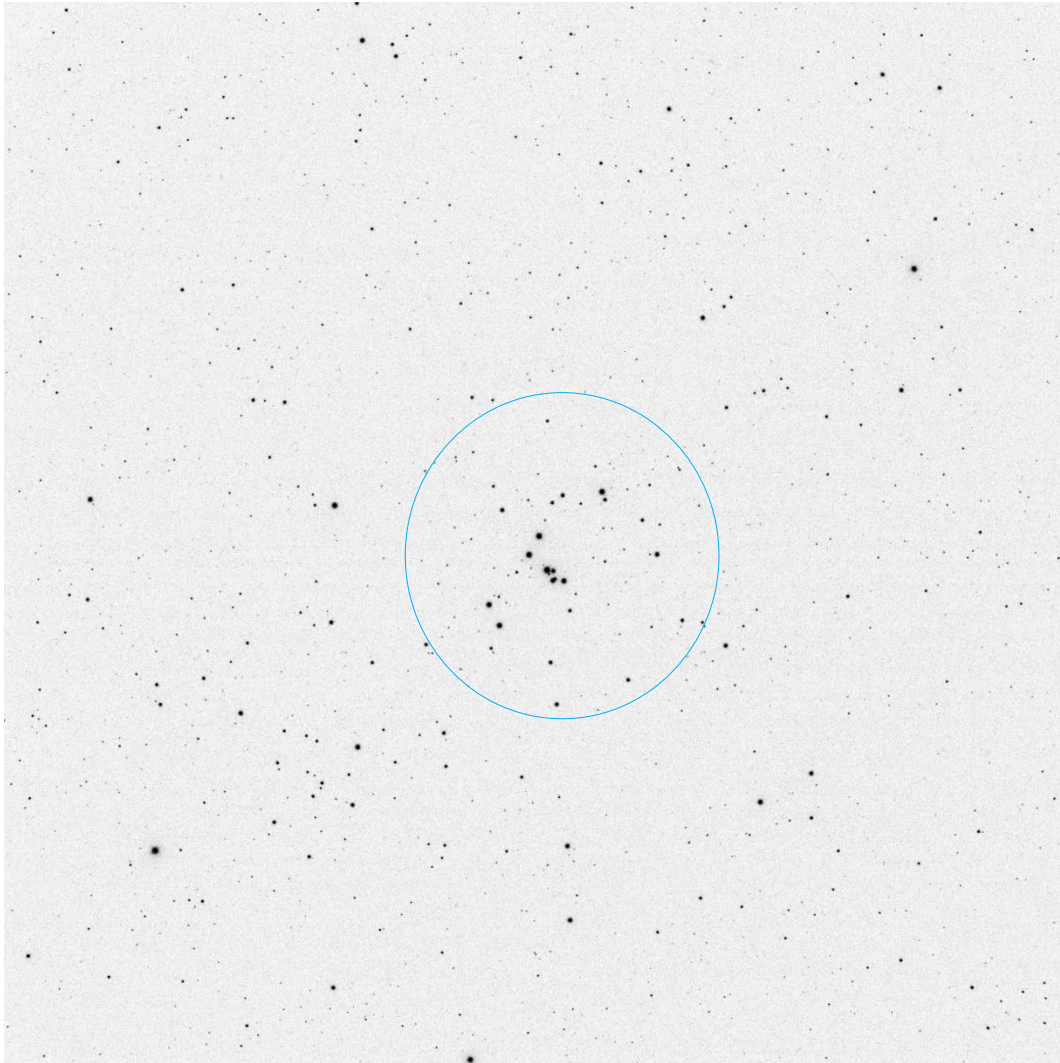

Visual Description      Small cluster, dominated by a half dozen brighter stars Some detachment and some central concentration. Less than 50 members.

# Observation Log Sheet

Object	<b>NGC 1662</b>	Date	1/12/24
Right Ascension (2000)	04h48m27s	Time	21:08
Declination (2000)	+10°56'12"	Sky: Transparency	Above Average
Constellation	Orion	Seeing	Average
Magnitude	6.8	Location	West Columbia TX
Angular Diameter (')	20.0	Instrument	Astro Tech AT80ED
Concentration Class	I-2-p (I-2-p)	Camera	ZWO ASI533MC Pro
Distance (ly)	1400	Sub Exposure (sec)	15
Diameter (ly)	8	Total Exposure (min)	5.0
		Image Software	SharpCap 4.1

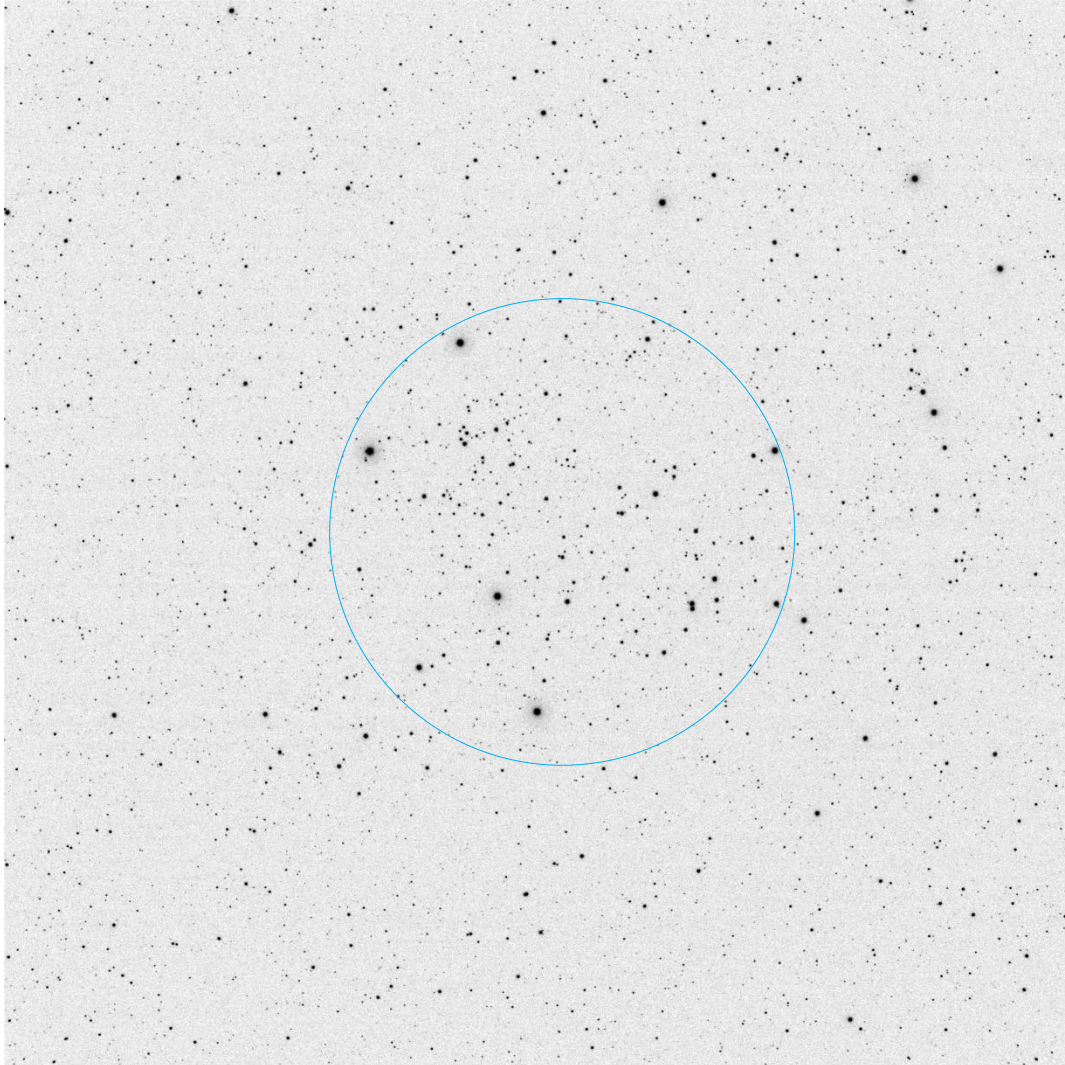

Visual Description      A medium sized cluster, well centralized and detached. About 14 brighter stars and another 20 or so fainter ones.

# Observation Log Sheet

Object	<b>NGC 1746</b>	Date	1/12/24
Right Ascension (2000)	05h03m50s	Time	20:54
Declination (2000)	+23°46'12"	Sky: Transparency	Above Average
Constellation	Taurus	Seeing	Average
Magnitude	5.2	Location	West Columbia TX
42	20.0	Instrument	Astro Tech AT80ED
Concentration Class	II-3-m (III-1-p)	Camera	ZWO ASI533MC Pro
Distance (ly)	1400	Sub Exposure (sec)	15
Diameter (ly)	17	Total Exposure (min)	5.0
		Image Software	SharpCap 4.1

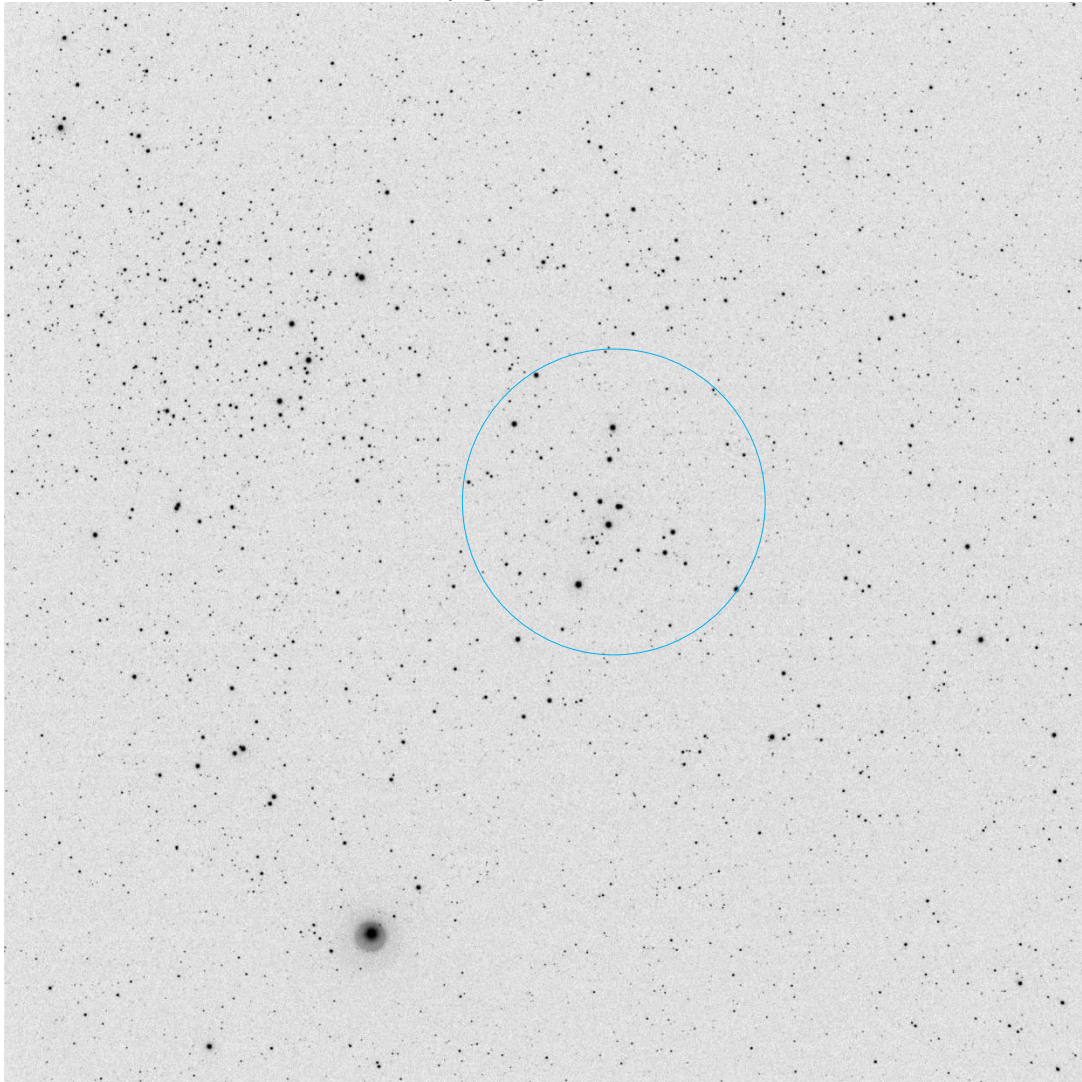

Visual Description      A medium sized cluster, not well centralized but detached. More than 50 associated stars with about a half dozen or so brighter ones.

# Observation Log Sheet

Object	<b>NGC 1807</b>	Date	1/12/24
Right Ascension (2000)	05h10m43s	Time	21:01
Declination (2000)	+16°31'18"	Sky: Transparency	Above Average
Constellation	Taurus	Seeing	Average
Magnitude	7.7	Location	West Columbia TX
42	15.0	Instrument	Astro Tech AT80ED
Concentration Class	II-2-p (II-2-p)	Camera	ZWO ASI533MC Pro
Distance (ly)		Sub Exposure (sec)	15
Diameter (ly)		Total Exposure (min)	5.0
		Image Software	SharpCap 4.1

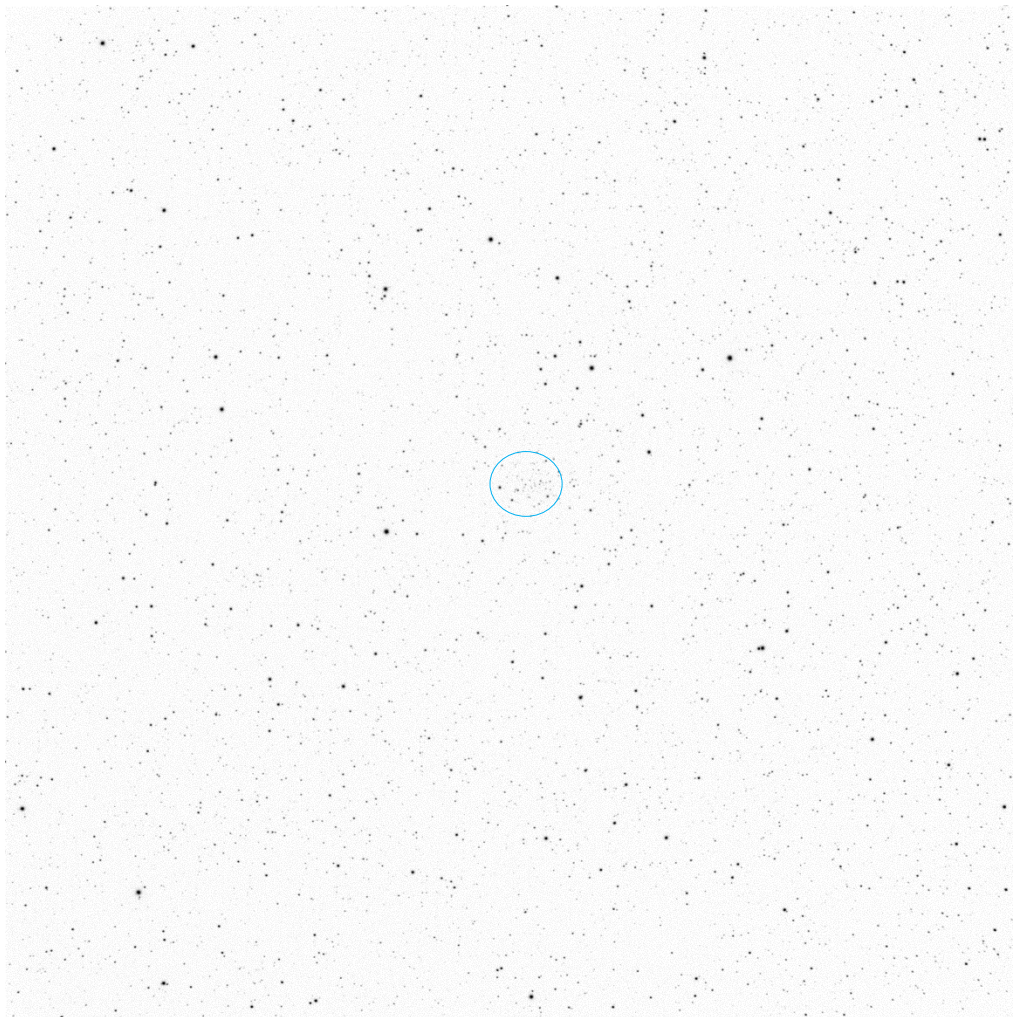

Visual Description      A medium sized cluster with less than 50 stars, 10 brighter ones and the remainder of varying brightness. Detached with weak concentration

# Observation Log Sheet

Object	<b>NGC 1798</b>	Date	1/9/24
Right Ascension (2000)	05h11m39s	Time	19:25
Declination (2000)	+47°41'30"	Sky: Transparency	Above Average
Constellation	Auriga	Seeing	Below Average
Magnitude	10.3	Location	West Columbia TX
Angular Diameter (')	5.0	Instrument	Astro Tech AT80ED
Concentration Class	IV-1-m	Camera	ZWO ASI533MC Pro
Distance (ly)		Sub Exposure (sec)	15
Diameter (ly)		Total Exposure (min)	5.25
		Image Software	SharpCap 4.0

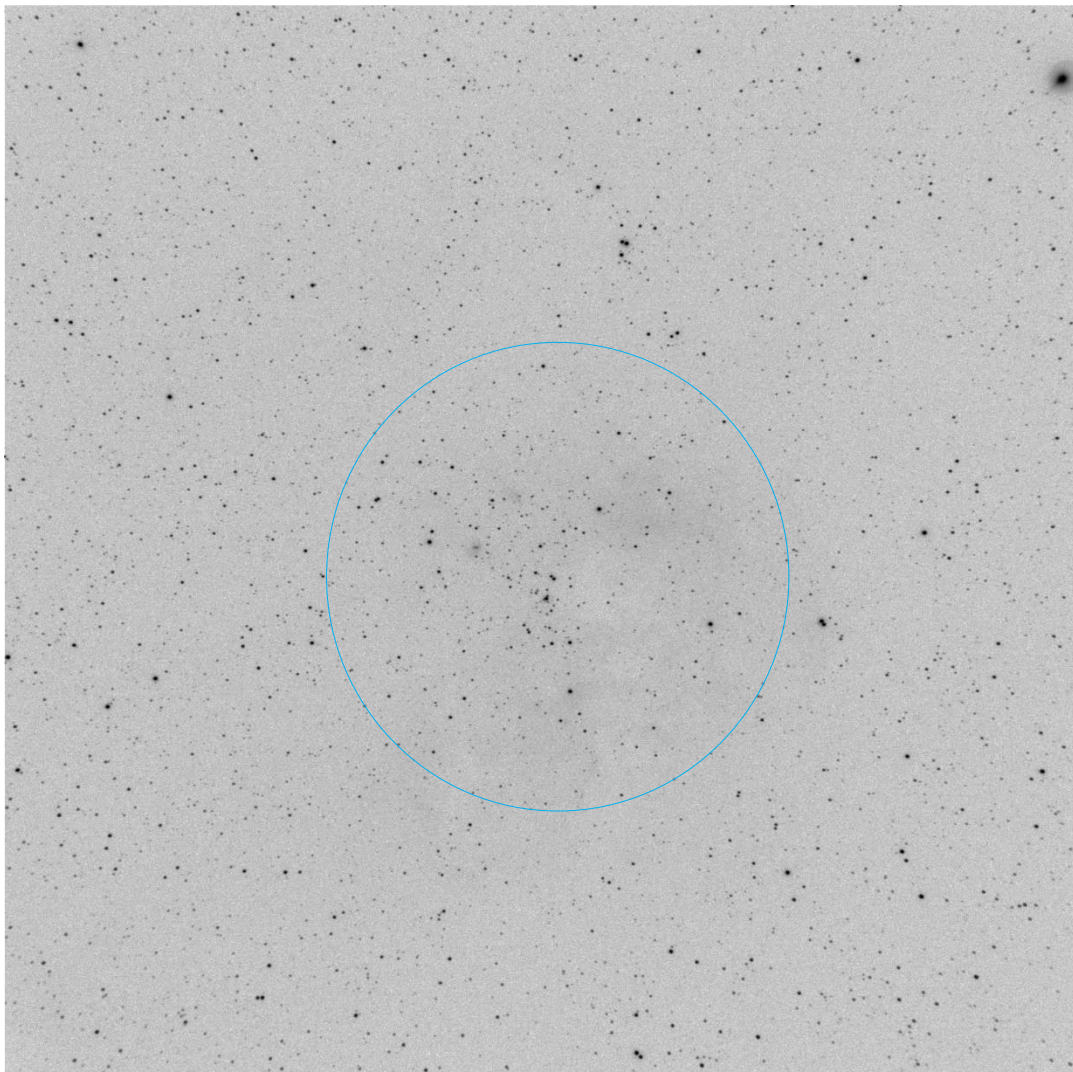

Visual Description      A very small cluster with very faint stars. Not well detached but somewhat concentrated. More than 50 members.

# Observation Log Sheet

Object	<b>NGC 1893</b>	Date	12/18/23
Right Ascension (2000)	05h22m44s	Time	19:27
Declination (2000)	+33°24'42"	Sky: Transparency	Average
Constellation	Auriga	Seeing	Average
Magnitude	6.8	Location	West Columbia TX
Angular Diameter (')	25	Instrument	Astro Tech AT80ED
Concentration Class	I-3-m (II-2-m)	Camera	ZWO ASI533MC Pro
Distance (ly)	20000	Sub Exposure (sec)	15
Diameter (ly)	140	Total Exposure (min)	5.5
		Image Software	SharpCap 4.0

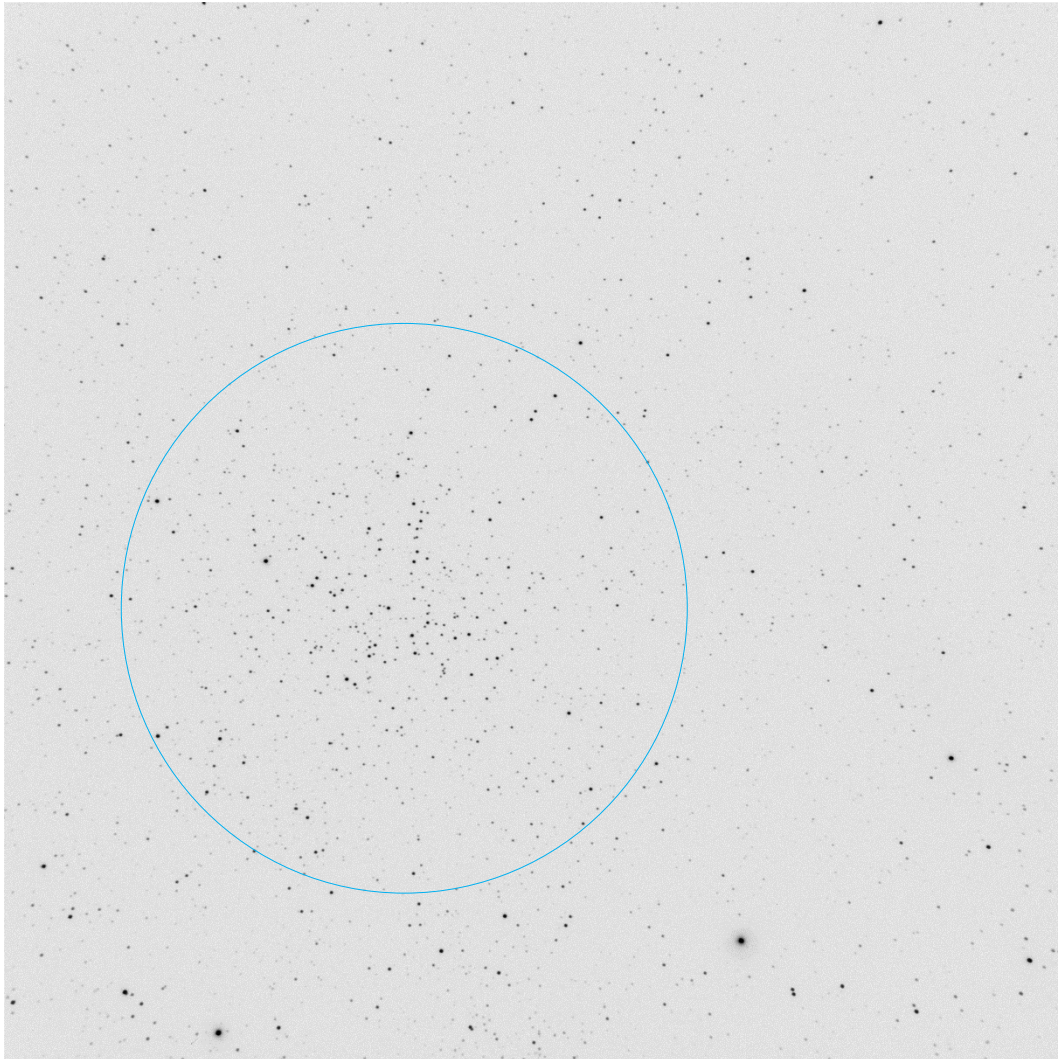

Visual Description      Large, rich cluster imbedded in nebulosity. Some concentration and detachment. More than 50 stars of brighter and fainter concentration.

# Observation Log Sheet

Object	<b>Messier 38</b>	Date	12/18/23
Right Ascension (2000)	05h28m40s	Time	19:49
Declination (2000)	+35°50'54"	Sky: Transparency	Average
Constellation	Auriga	Seeing	Average
Magnitude	5.9	Location	West Columbia TX
Angular Diameter (')	20	Instrument	Astro Tech AT80ED
Concentration Class	II-2-r (III-2-m)	Camera	ZWO ASI533MC Pro
Distance (ly)	3500	Sub Exposure (sec)	15
Diameter (ly)	20	Total Exposure (min)	5.0
		Image Software	SharpCap 4.0

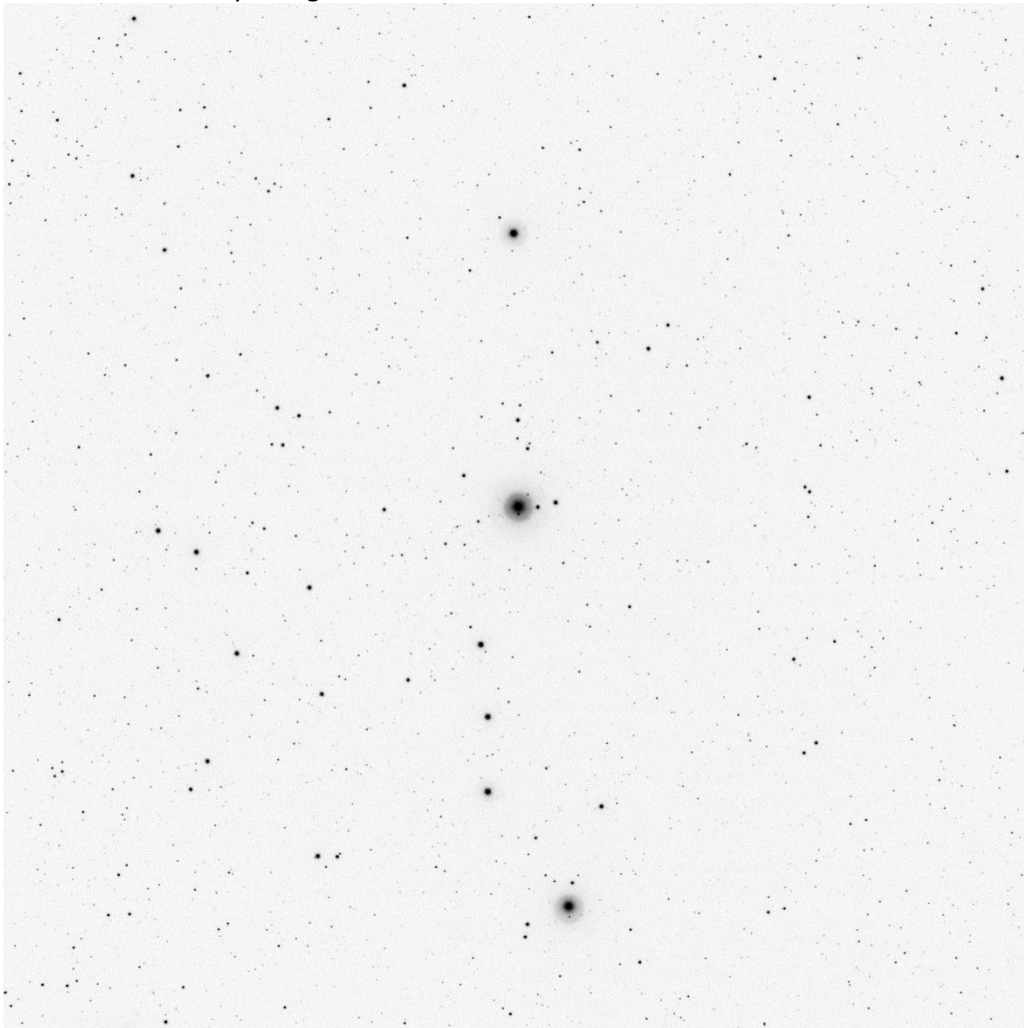

Visual Description      Large, rich cluster with a range of brightness and some centralization.  
Cluster is detached with more than 100 members.

# Observation Log Sheet

Object	<b>Collinder 69</b>	Date	1/12/24
Right Ascension (2000)	05h35m06s	Time	21:15
Declination (2000)	+09°56'00"	Sky: Transparency	Above Average
Constellation	Orion	Seeing	Average
Magnitude	2.3	Location	West Columbia TX
Angular Diameter (')	70	Instrument	Astro Tech AT80ED
Concentration Class	II-2-m	Camera	ZWO ASI533MC Pro
Distance (ly)	1300	Sub Exposure (sec)	15
Diameter (ly)	27	Total Exposure (min)	5.5
		Image Software	SharpCap 4.1

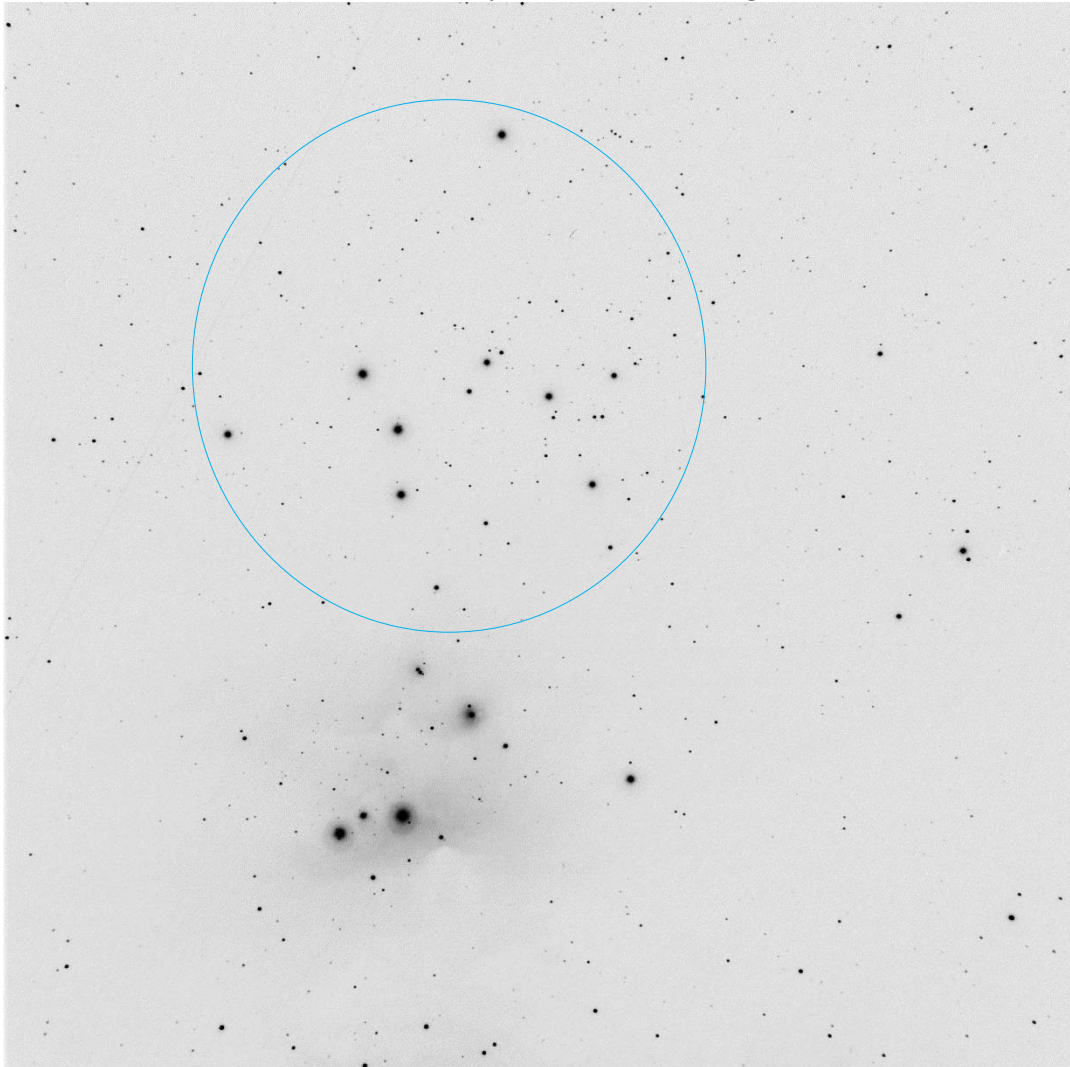

Visual Description      A very large cluster, larger than the f.o.v. of the image below. Well detached, little centralization, moderate range of brightness with 50+ stars, dominated by 3 brighter ones.

# Observation Log Sheet

Object	<b>NGC 1981</b>	Date	1/29/24
Right Ascension (2000)	05h35m09s	Time	19:06
Declination (2000)	-04°25'54"	Sky: Transparency	Below Average
Constellation	Orion	Seeing	Average
Magnitude	4.5	Location	West Columbia TX
Angular Diameter (')	28	Instrument	Astro Tech AT80ED
Concentration Class	III-3-p (III-2-p-n)	Camera	ZWO ASI533MC Pro
Distance (ly)	1300	Sub Exposure (sec)	15
Diameter (ly)	11	Total Exposure (min)	5.0
		Image Software	SharpCap 4.0

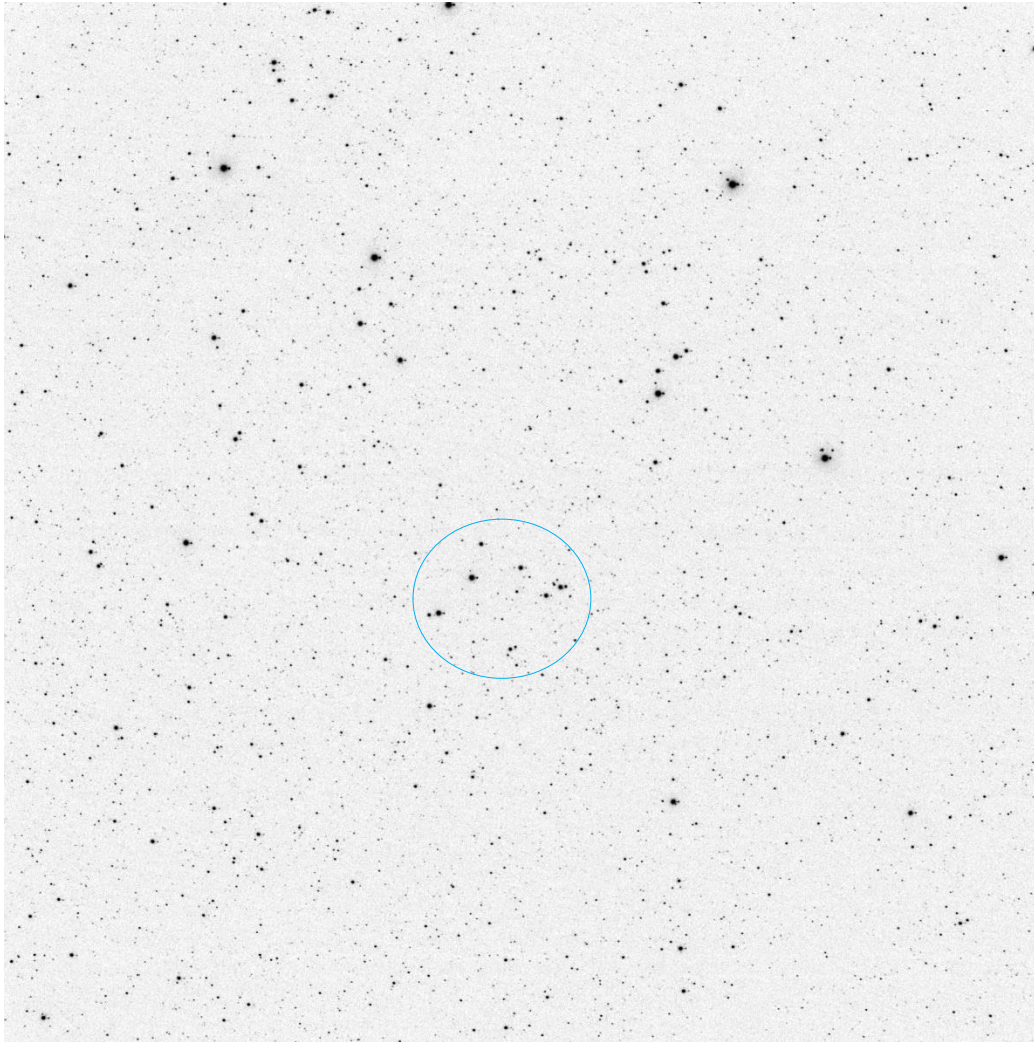

Visual Description      A large cluster of 9 bright stars and about two dozen fainter ones. The cluster is immediately North of the Running Man Nebula.

# Observation Log Sheet

Object	<b>Dol Dzim 3</b>	Date	1/12/24
Right Ascension (2000)	05h35m12s	Time	20:45
Declination (2000)	+26°29'00"	Sky: Transparency	Above Average
Constellation	Taurus	Seeing	Average
Magnitude	9.6	Location	West Columbia TX
Angular Diameter (')	10.0	Instrument	Astro Tech AT80ED
Concentration Class	IV-1-p	Camera	ZWO ASI533MC Pro
Distance (ly)		Sub Exposure (sec)	15
Diameter (ly)		Total Exposure (min)	5.0
		Image Software	SharpCap 4.1

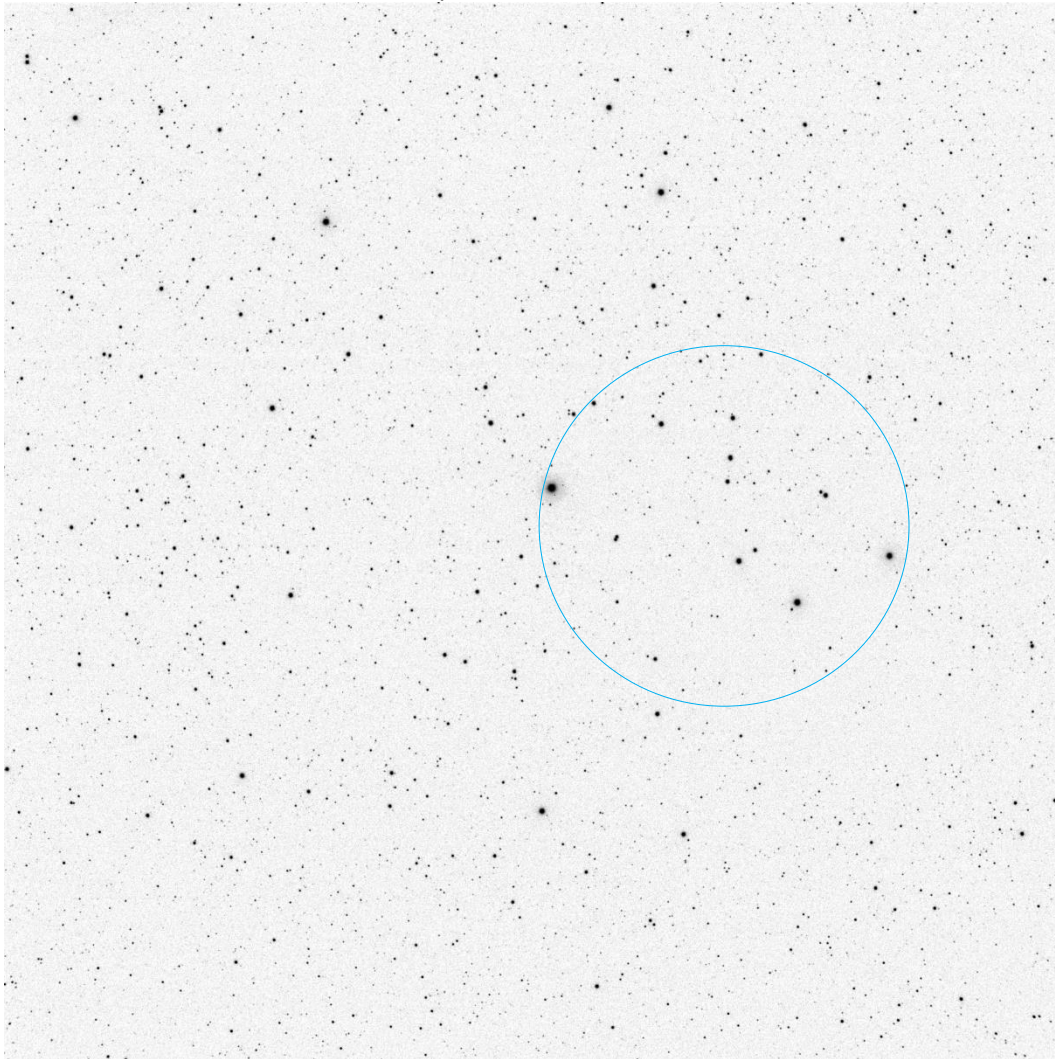

Visual Description      A small cluster of 10 stars of similar brightness. Well detached with no centralization.

# Observation Log Sheet

Object	<b>Dol Dzim 4</b>	Date	1/12/24
Right Ascension (2000)	05h35m54s	Time	21:37
Declination (2000)	+25°57'00"	Sky: Transparency	Above Average
Constellation	Taurus	Seeing	Average
Magnitude	6.8	Location	West Columbia TX
Angular Diameter (')	25.0	Instrument	Astro Tech AT80ED
Concentration Class	II-3-p	Camera	ZWO ASI533MC Pro
Distance (ly)		Sub Exposure (sec)	15
Diameter (ly)		Total Exposure (min)	5.0
		Image Software	SharpCap 4.1

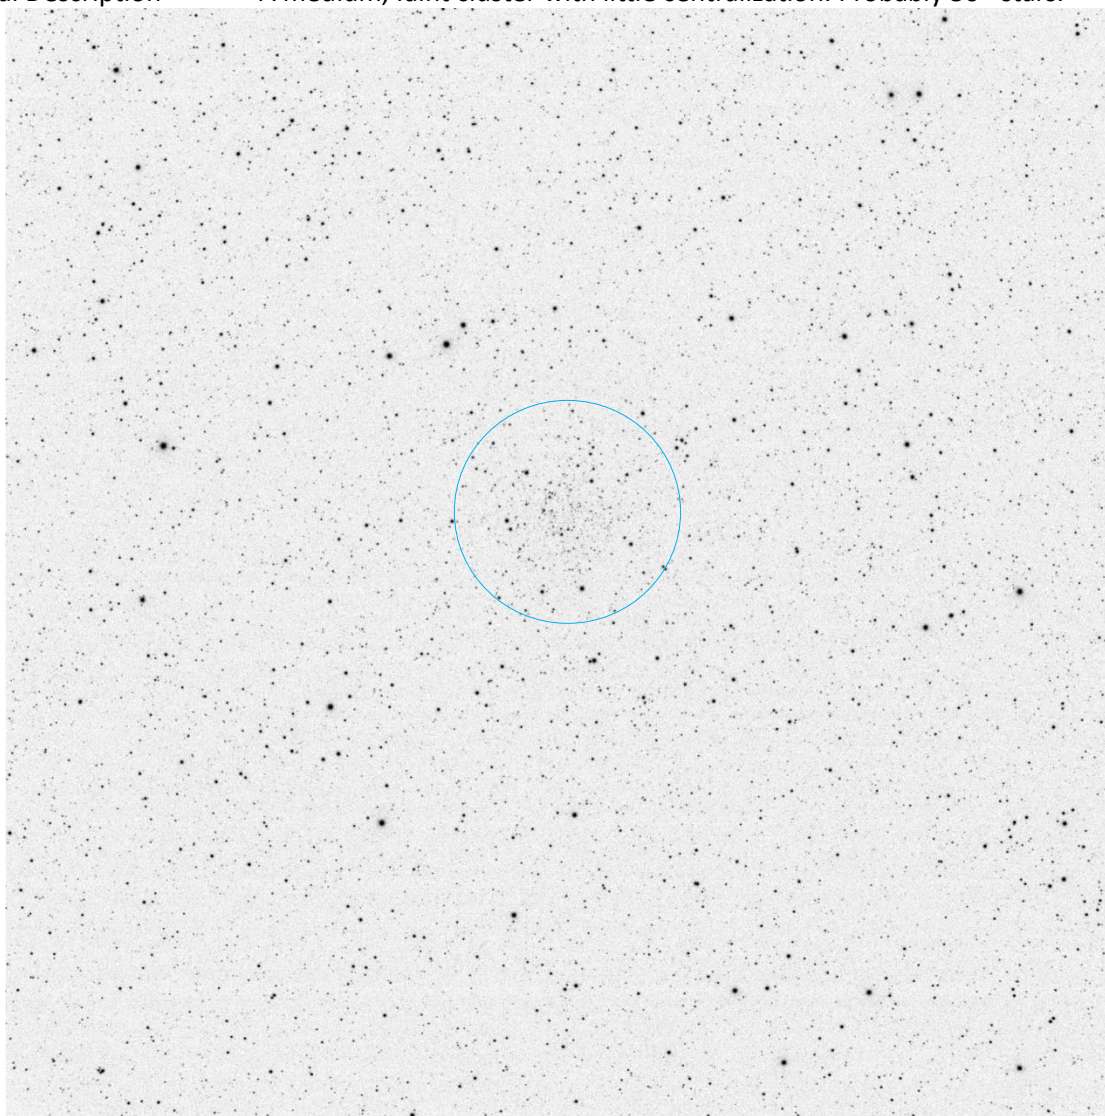

Visual Description      A large cluster with 12 brighter stars and many fainter ones. Good detachment, but poor centralization.

# Observation Log Sheet

Object	<b>NGC 2141</b>	Date	1/12/24
Right Ascension (2000)	06h02m55s	Time	21:22
Declination (2000)	+10°26'48"	Sky: Transparency	Above Average
Constellation	Orion	Seeing	Average
Magnitude	8.2	Location	West Columbia TX
Angular Diameter (')	10.0	Instrument	Astro Tech AT80ED
Concentration Class	II-3-m	Camera	ZWO ASI533MC Pro
Distance (ly)	13000	Sub Exposure (sec)	15
Diameter (ly)	38	Total Exposure (min)	5.0
		Image Software	SharpCap 4.1

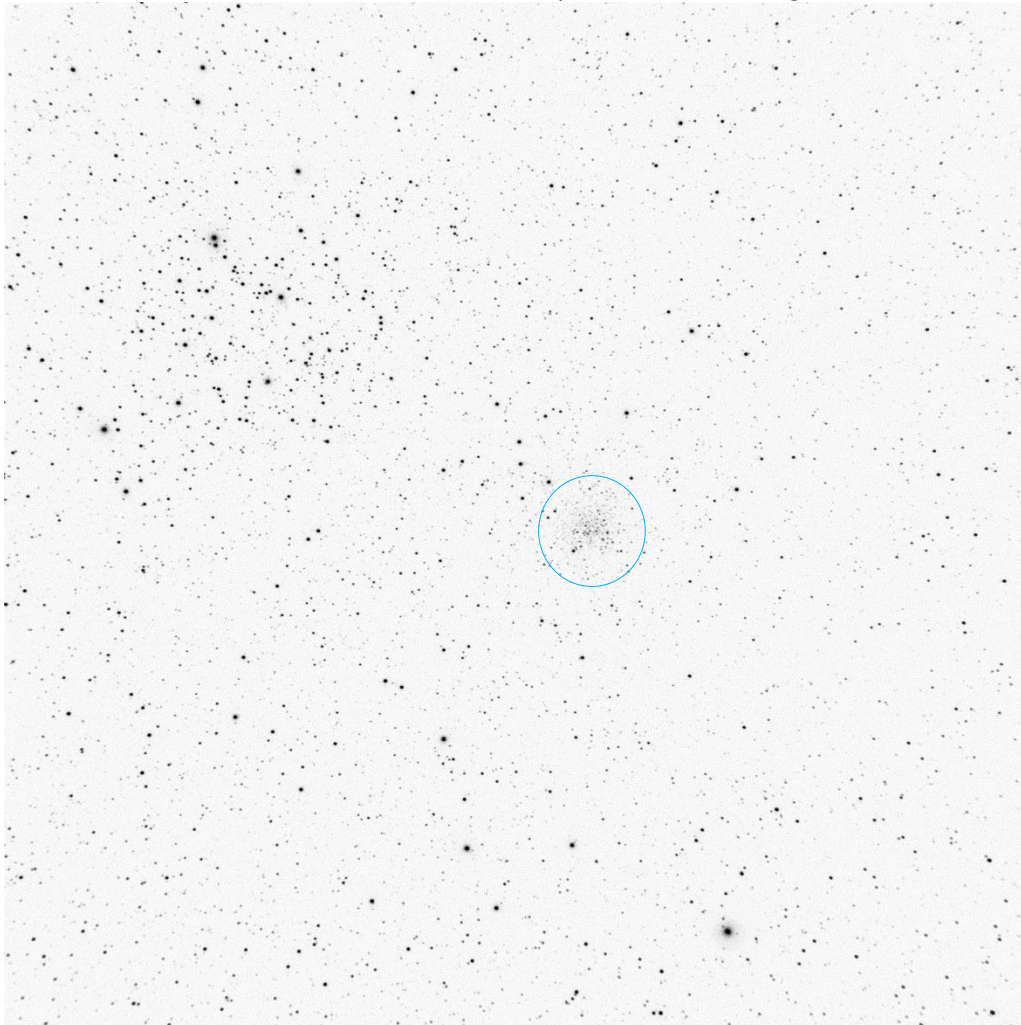

Visual Description      A medium, faint cluster with little centralization. Probably 50+ stars.

# Observation Log Sheet

Object	<b>NGC 2158</b>	Date	1/29/24
Right Ascension (2000)	06h07m25s	Time	19:17
Declination (2000)	+24°05'48"	Sky: Transparency	Below Average
Constellation	Gemini	Seeing	Average
Magnitude	9.3	Location	West Columbia TX
Angular Diameter (')	5.0	Instrument	Astro Tech AT80ED
Concentration Class	II-1-m (II-3-r)	Camera	ZWO ASI533MC Pro
Distance (ly)	17000	Sub Exposure (sec)	15
Diameter (ly)	24	Total Exposure (min)	5.0
		Image Software	SharpCap 4.0

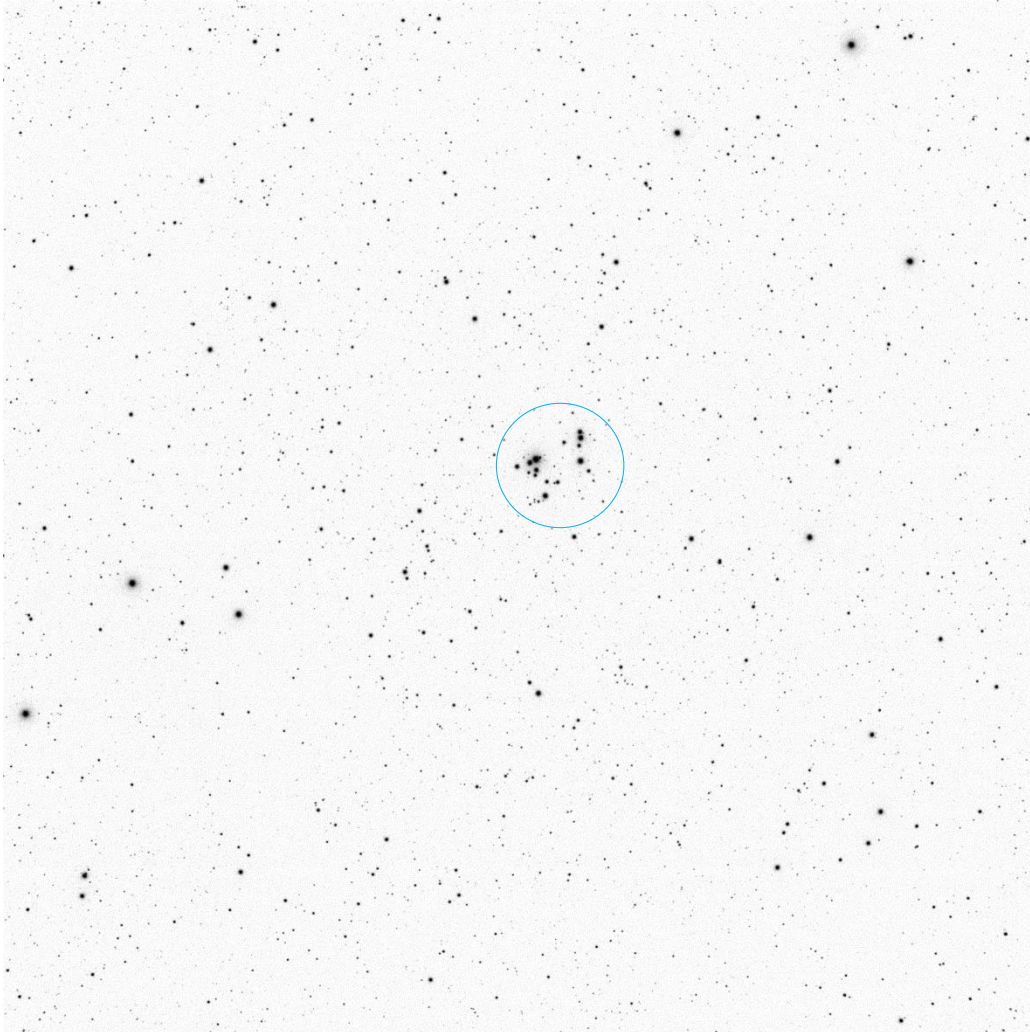

Visual Description      A small cluster just to the South-west of M35, well detached and somewhat concentrated. More than fifty stars of similar brightness.

# Observation Log Sheet

Object	<b>37 Cluster</b>	Date	1/12/24
Right Ascension (2000)	06h08m24s	Time	21:29
Declination (2000)	+13°57'54"	Sky: Transparency	Above Average
Constellation	Orion	Seeing	Average
Magnitude	5.6	Location	West Columbia TX
Angular Diameter (')	5.0	Instrument	Astro Tech AT80ED
Concentration Class	I-2-p	Camera	ZWO ASI533MC Pro
Distance (ly)	3400	Sub Exposure (sec)	15
Diameter (ly)	5	Total Exposure (min)	5.0
		Image Software	SharpCap 4.1

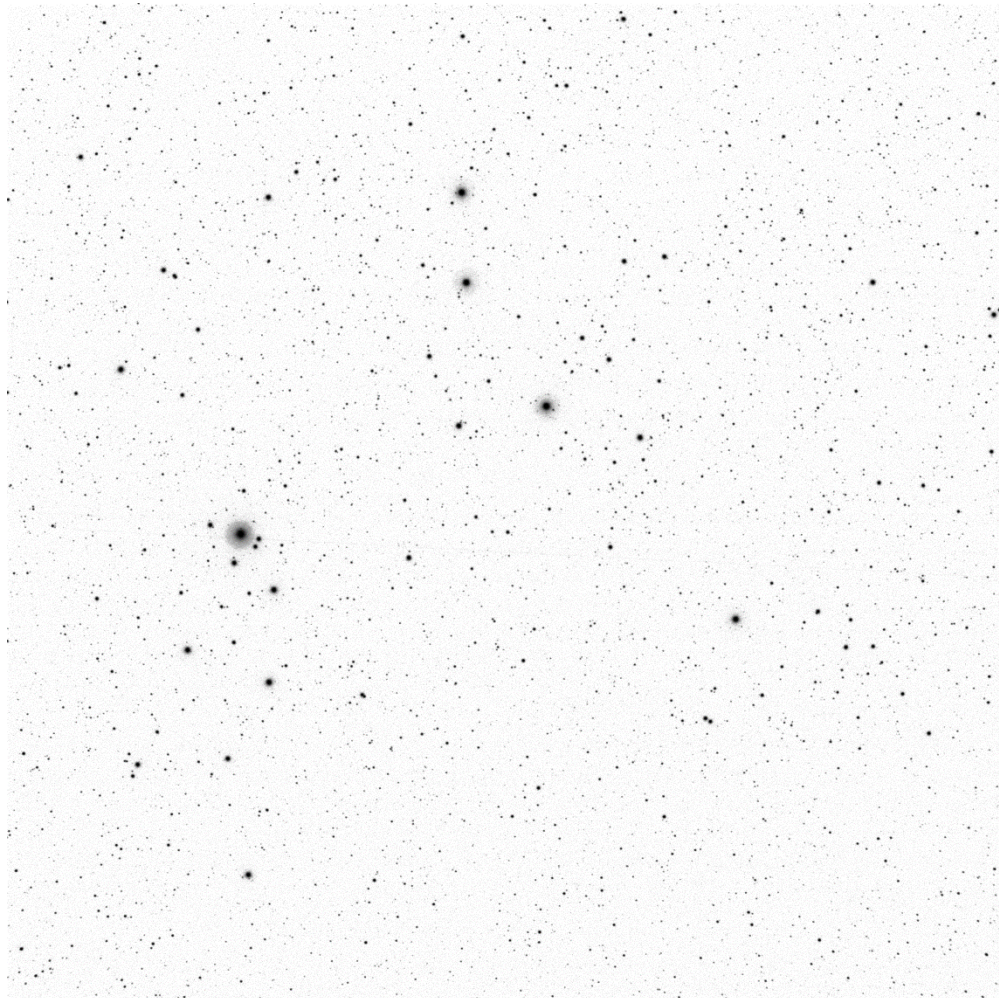

Visual Description      A small cluster of 20 or so stars, well detached and centralized with a medium range in brightness. Stars arranged in two wavy lines.

# Observation Log Sheet

Object	<b>NGC 2232</b>	Date	1/12/24
Right Ascension (2000)	06h27m15s	Time	22:21
Declination (2000)	-04°45'30"	Sky: Transparency	Above Average
Constellation	Orion	Seeing	Average
Magnitude	4.0	Location	West Columbia TX
Angular Diameter (')	53	Instrument	Astro Tech AT80ED
Concentration Class	III-3-r (IV-3-p)	Camera	ZWO ASI533MC Pro
Distance (ly)	1200	Sub Exposure (sec)	15
Diameter (ly)	18	Total Exposure (min)	5.0
		Image Software	SharpCap 4.1

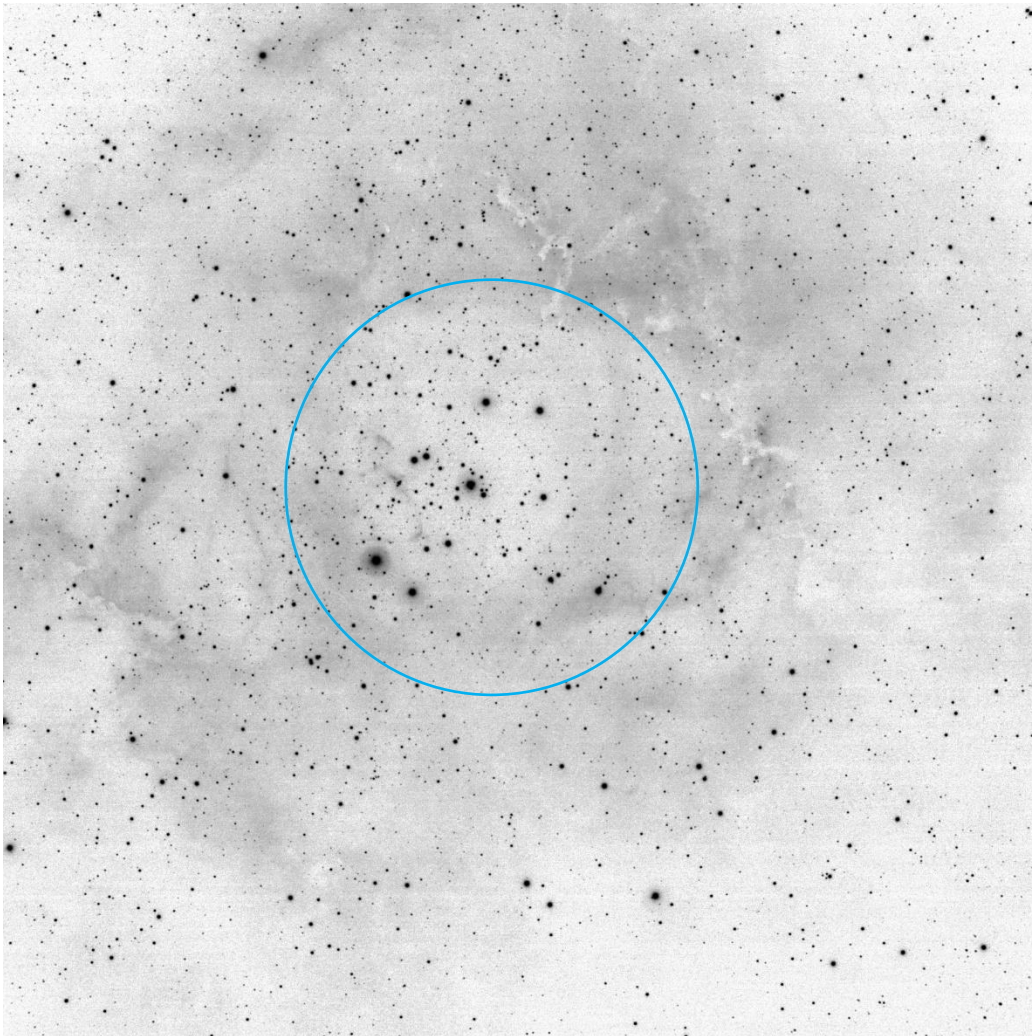

**Visual Description** A very large cluster completely fills the f.o.v. Five brighter predominant members with probably 100 + fainter ones, although what is field and what is associated is difficult to determine. Strong detachment, but poor centralization.

# Observation Log Sheet

Object	<b>NGC 2244 (Rosette)</b>	Date	1/12/24
Right Ascension (2000)	06h31m55s	Time	22:11
Declination (2000)	-04°56'30"	Sky: Transparency	Above Average
Constellation	Monoceros	Seeing	Average
Magnitude	4.7	Location	West Columbia TX
Angular Diameter (')	29.0	Instrument	Astro Tech AT80ED
Concentration Class	II-3-m-n (II-3-p-n)	Camera	ZWO ASI533MC Pro
Distance (ly)	4700	Sub Exposure (sec)	15
Diameter (ly)	40	Total Exposure (min)	20.0
		Image Software	SharpCap 4.1

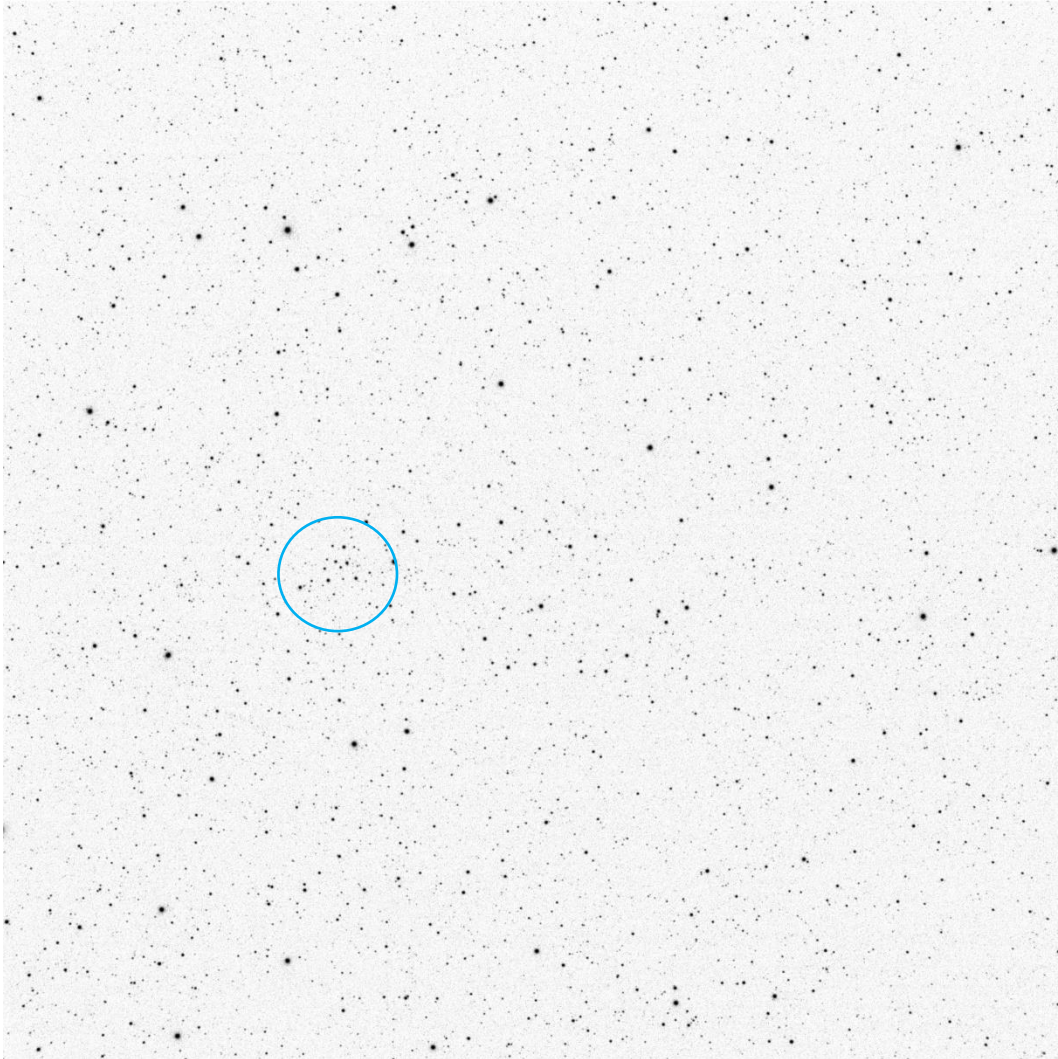

Visual Description      A medium sized cluster centered in the Rosette Nebula. The cluster contains 50+ stars of which about a dozen or so are brighter ones. The cluster is well detached with some centralization.

# Observation Log Sheet

Object	<b>Ruprecht 1</b>	Date	1/12/24
Right Ascension (2000)	06h36m24s	Time	22:29
Declination (2000)	-14°11'00"	Sky: Transparency	Above Average
Constellation	Canis Major	Seeing	Average
Magnitude	10.3	Location	West Columbia TX

Distance (ly)	3300	Sub Exposure (sec)	15
Diameter (ly)	5	Total Exposure (min)	5.0
		Image Software	SharpCap 4.1

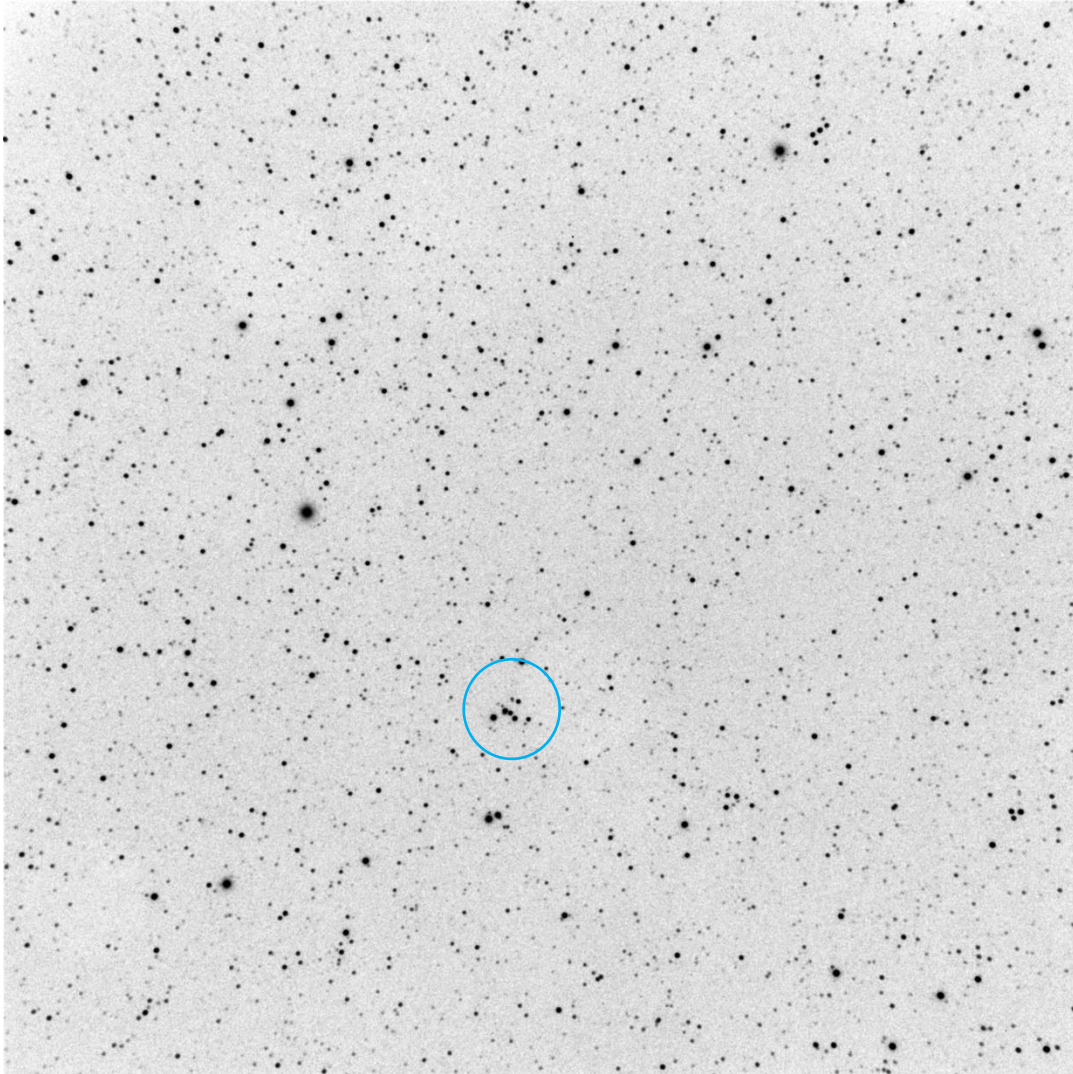

Visual Description      A small cluster of about 20 or so members of similar brightness, Detached with some centralization.

# Observation Log Sheet

Object	<b>Ruprecht 3</b>	Date	2/20/24
Right Ascension (2000)	06h42m07s	Time	21:12
Declination (2000)	-29°27'00"	Sky: Transparency	Average
Constellation	Canis Major	Seeing	Average
Magnitude	10.10	Location	West Columbia TX
Angular Diameter (')	3.0	Instrument	Astro Tech AT80ED
Concentration Class	I-1-p	Camera	ZWO ASI533MC Pro
Distance (ly)	2300	Sub Exposure (sec)	15
Diameter (ly)	2	Total Exposure (min)	5.0
		Image Software	SharpCap 4.1

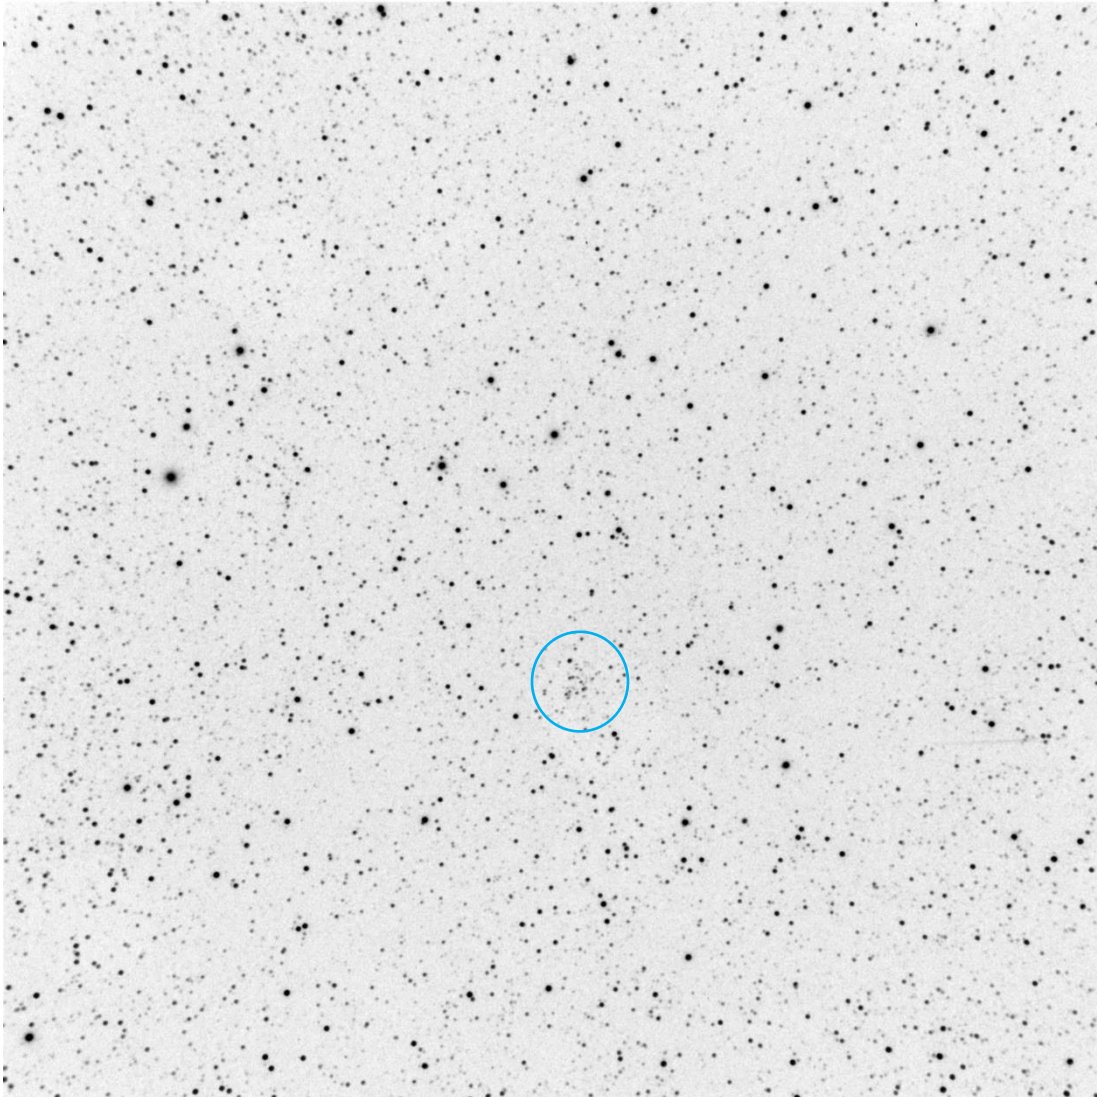

Visual Description      A tiny cluster composed of less than 10 stars of similar brightness with strong central concentration.

# Observation Log Sheet

Object	<b>Berkeley 33</b>	Date	2/20/24
Right Ascension (2000)	06h57m42s	Time	21:23
Declination (2000)	-13°13'00"	Sky: Transparency	Average
Constellation	Canis Major	Seeing	Average
Magnitude	11.4	Location	West Columbia TX
Angular Diameter (')	4.0	Instrument	Astro Tech AT80ED
Concentration Class	II-1-p	Camera	ZWO ASI533MC Pro
Distance (ly)	15000	Sub Exposure (sec)	15
Diameter (ly)	18	Total Exposure (min)	5.0
		Image Software	SharpCap 4.1

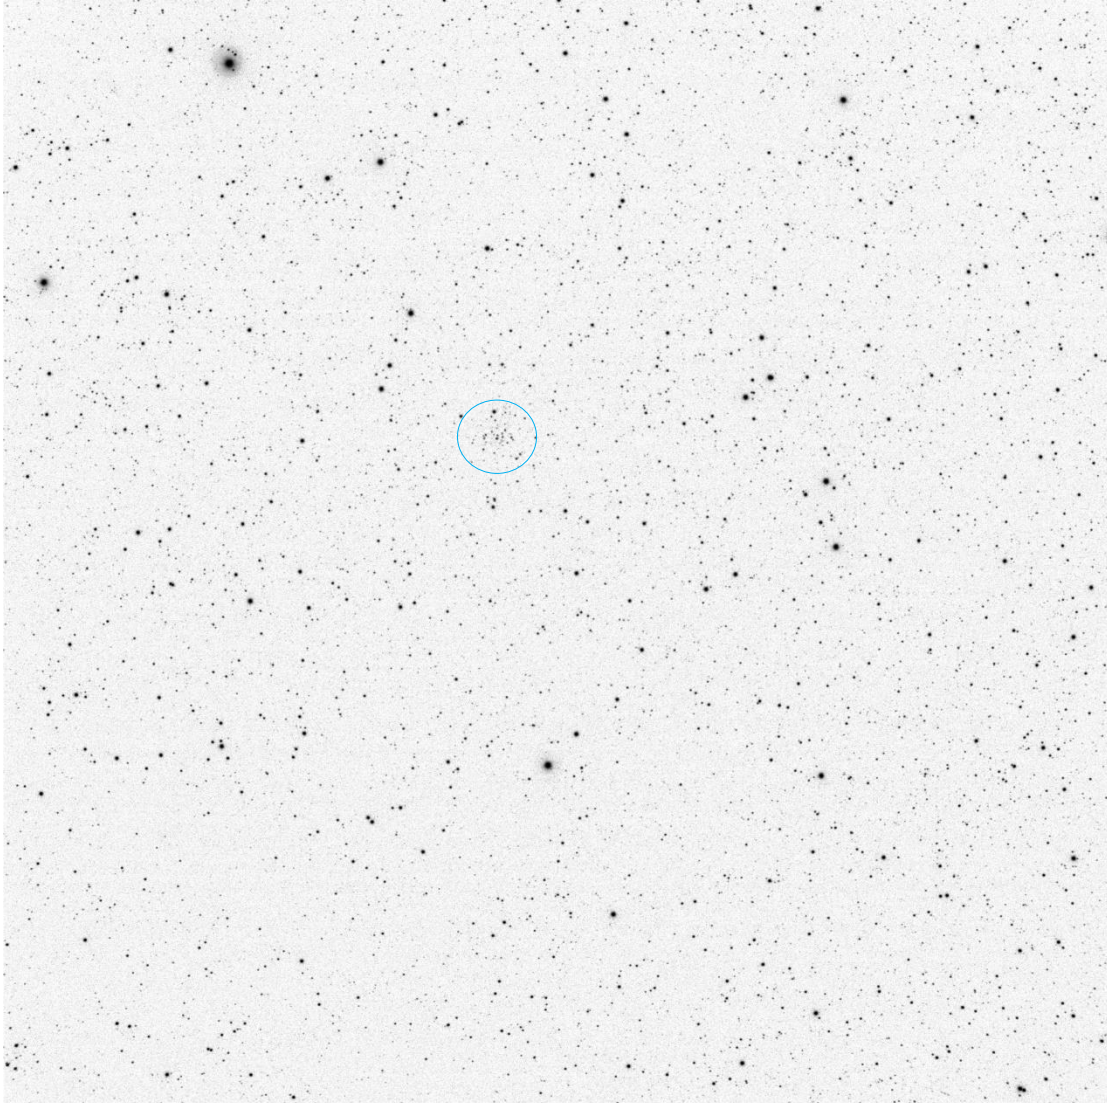

Visual Description      A tiny cluster composed of less than 50 stars of similar brightness with weak central concentration and little detachment.

# Observation Log Sheet

Object	<b>Berkely 30</b>	Date	1/12/24
Right Ascension (2000)	06h57m54s	Time	21:46
Declination (2000)	+03°13'00"	Sky: Transparency	Above Average
Constellation	Monoceros	Seeing	Average
Magnitude	11.0	Location	West Columbia TX
Angular Diameter (')	3.0	Instrument	Astro Tech AT80ED
Concentration Class	IV-1-p	Camera	ZWO ASI533MC Pro
Distance (ly)	16000	Sub Exposure (sec)	15
Diameter (ly)	14	Total Exposure (min)	5.0
		Image Software	SharpCap 4.1

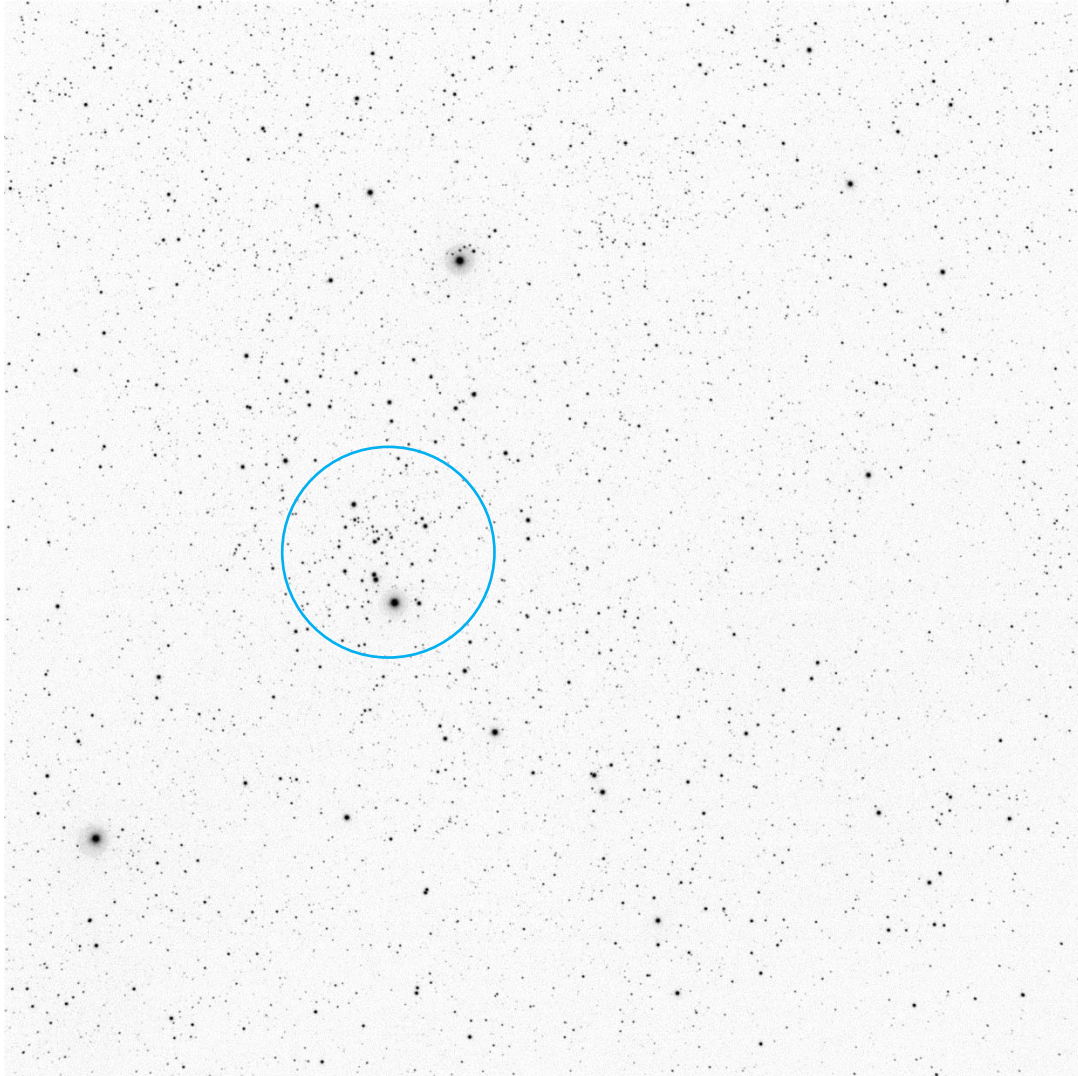

Visual Description      A very small and faint cluster of less than 50 stars, not well detached but well centralized. Most stars are similar in brightness.

# Observation Log Sheet

Object	<b>NGC 2353</b>	Date	1/12/24
Right Ascension (2000)	07h14m30s	Time	22:37
Declination (2000)	-10°16'00"	Sky: Transparency	Above Average
Constellation	Monoceros	Seeing	Average
Magnitude	5.7	Location	West Columbia TX
Angular Diameter (')	18.0	Instrument	Astro Tech AT80ED
Concentration Class	IV-3-p (II-2-p)	Camera	ZWO ASI533MC Pro
Distance (ly)	3600	Sub Exposure (sec)	15
Diameter (ly)	19	Total Exposure (min)	5.0
		Image Software	SharpCap 4.1

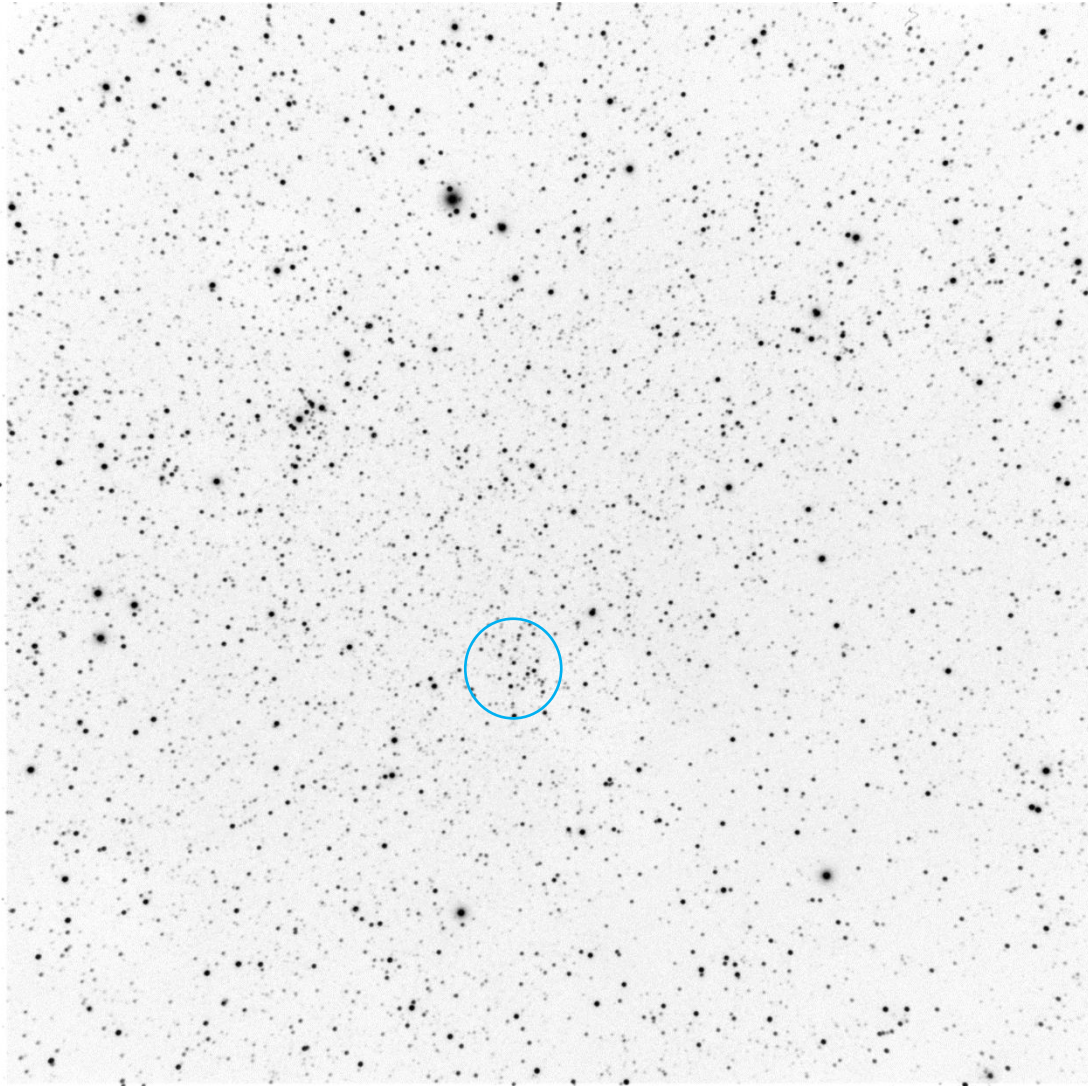

Visual Description      A medium sized cluster. There are about eight brighter members with another 30 or so fainter ones. Not well detached but good concentration.

# Observation Log Sheet

Object	<b>Collinder 145</b>	Date	2/20/24
Right Ascension (2000)	07h26m25s	Time	20:15
Declination (2000)	-24°12'00"	Sky: Transparency	Average

Object	<b>Dol-Dzim 9</b>	Date	11/7/24
Right Ascension (2000)	18h08m48s	Time	19:12
Declination (2000)	+31°32'00"	Sky: Transparency	Average
Constellation	Hercules	Seeing	Average
Magnitude	7.0	Location	West Columbia TX
Angular Diameter (')	28	Instrument	Astro Tech AT80ED
Concentration Class	IV-2-m	Camera	ZWO ASI533MC Pro
Distance (ly)		Sub Exposure (sec)	15
Diameter (ly)		Total Exposure (min)	7.45
		Image Software	SharpCap 4.0

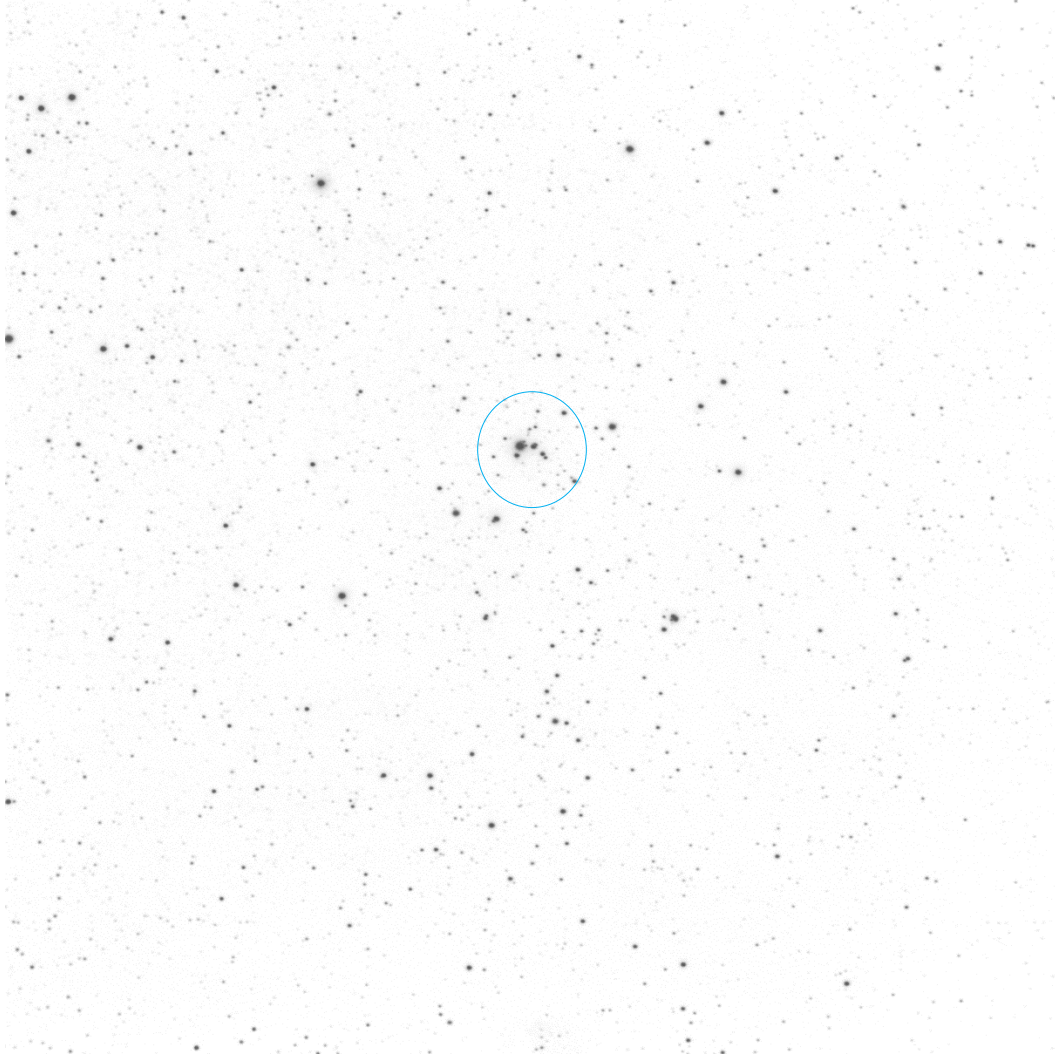

Visual Description      Large, dispersed cluster with 6 brighter stars and 30 fainter ones.

# Observation Log Sheet

Object	<b>NGC 6604</b>	Date	9/4/23
Right Ascension (2000)	18h18m03s	Time	22:01
Declination (2000)	-12°14'30"	Sky: Transparency	Above Average
Constellation	Serpens Cauda	Seeing	Above Average
Magnitude	8.3	Location	West Columbia TX
Angular Diameter (')	5.0	Instrument	Astro Tech AT80ED
Concentration Class	I-1-p (I-3-p-n)	Camera	ZWO ASI183MC
Distance (ly)	5500	Sub Exposure (sec)	15
Diameter (ly)	8	Total Exposure (min)	5.0
		Image Software	SharpCap 4.0

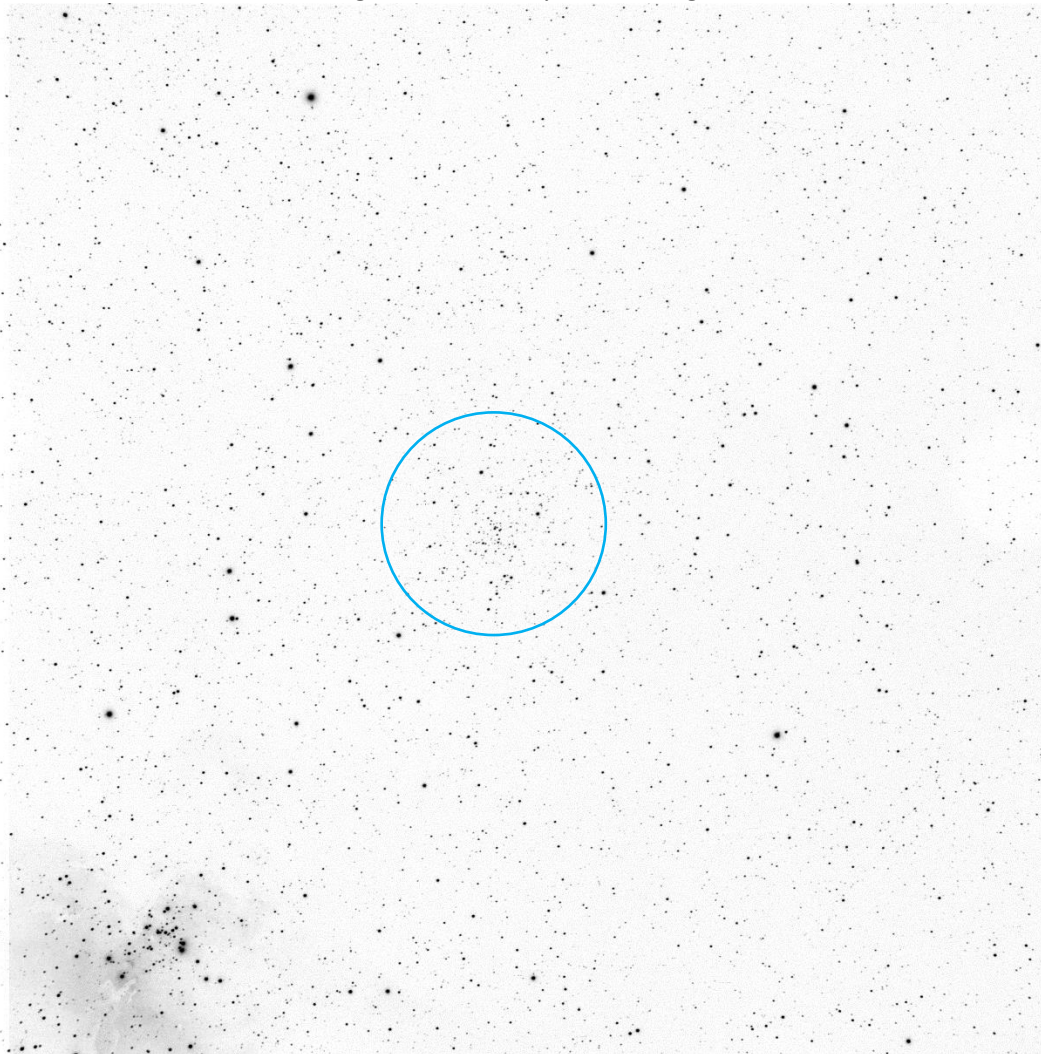

Visual Description      Very small cluster of < a dozen stars. Seems to be well concentrated around single brightest star which seems to have two fainter companions.

# Observation Log Sheet

Object	<b>Collinder 372</b>	Date	7/15/24
Right Ascension (2000)	18h18m35s	Time	22:15
Declination (2000)	-13°20'45"	Sky: Transparency	Average
Constellation	Serpens Cauda	Seeing	Below Average
Magnitude	9.8	Location	West Columbia TX
Angular Diameter (')	5.0	Instrument	Astro Tech AT80ED
Concentration Class	IV-1-m	Camera	ZWO ASI533MC
Distance (ly)	5600	Sub Exposure (sec)	15
Diameter (ly)	8	Total Exposure (min)	10.5
		Image Software	SharpCap 4.0

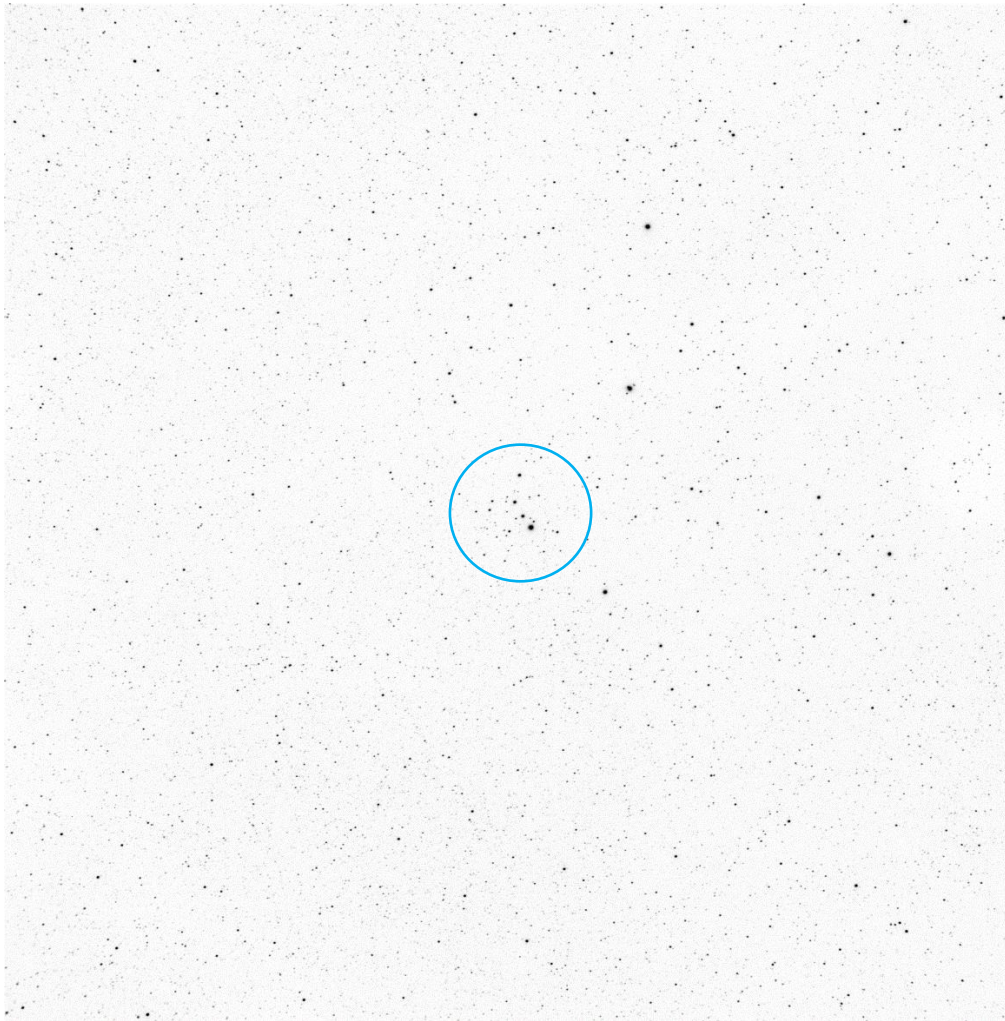

Visual Description      OC within 1 degree of M16. 10-15 minutes in diameter, stars of mostly similar brightness. Possibly some elongation in M16 direction.

# Observation Log Sheet

Object	<b>Collinder 378</b>	Date	7/15/24
Right Ascension (2000)	18h26m10s	Time	22:10
Declination (2000)	-19°42'13"	Sky: Transparency	Average
Constellation	Sagittarius	Seeing	Below Average
Magnitude	8.5	Location	West Columbia TX

Distance (ly)	6	Sub Exposure (sec)	15
Diameter (ly)	.036	Total Exposure (min)	10.25
		Image Software	SharpCap 4.0

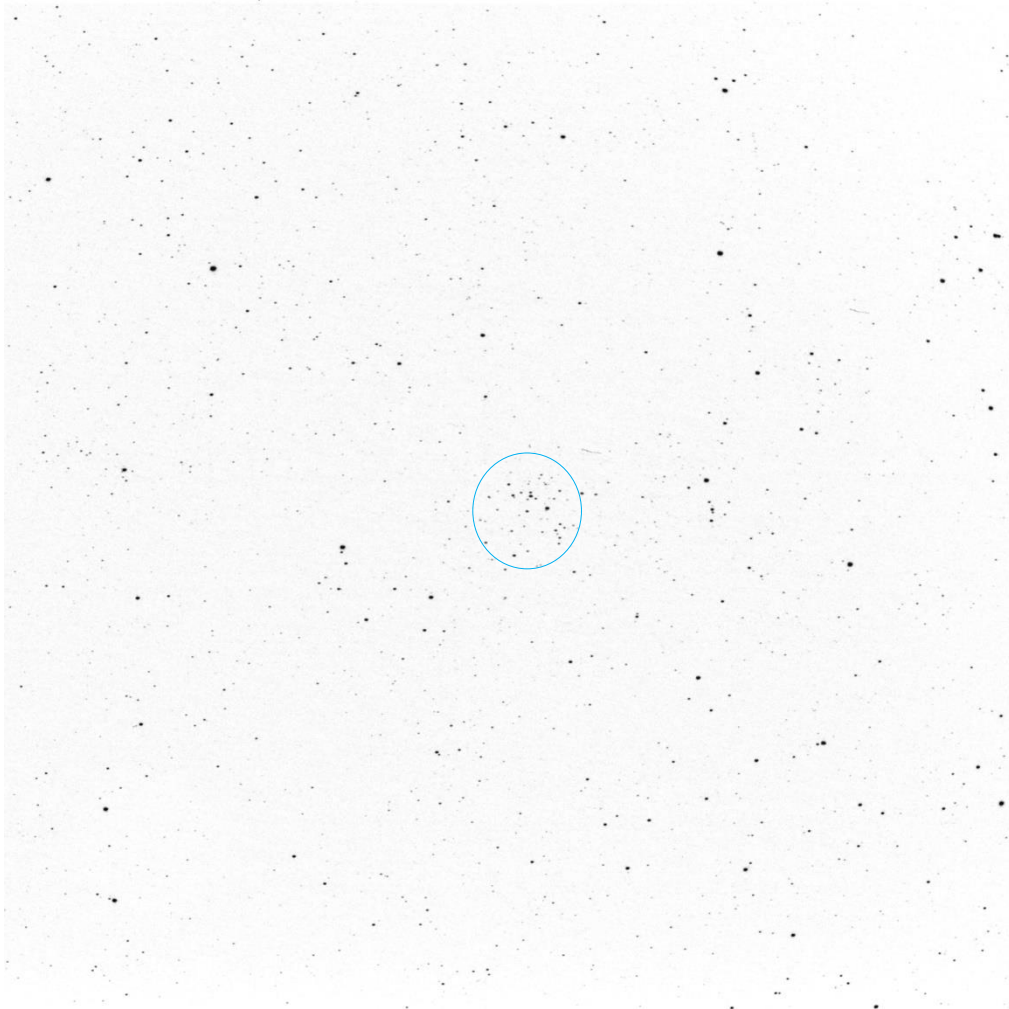

Visual Description      Small cluster, arrow shaped with one bright star at the apex. 50+ stars

# Observation Log Sheet

Object	<b>Trumpler 35</b>	Date	9/2/23
Right Ascension (2000)	18h44m15	Time	22:56
Declination (2000)	-04°10'54"	Sky: Transparency	Below Average
Constellation	Scutum	Seeing	Average
Magnitude	9.0	Location	West Columbia TX
Angular Diameter (')	5.0	Instrument	Astro Tech AT80ED
Concentration Class	II-3-p	Camera	ZWO ASI183MC
Distance (ly)	3,900	Sub Exposure (sec)	15
Diameter (ly)	6	Total Exposure (min)	6.5
		Image Software	SharpCap 4.0

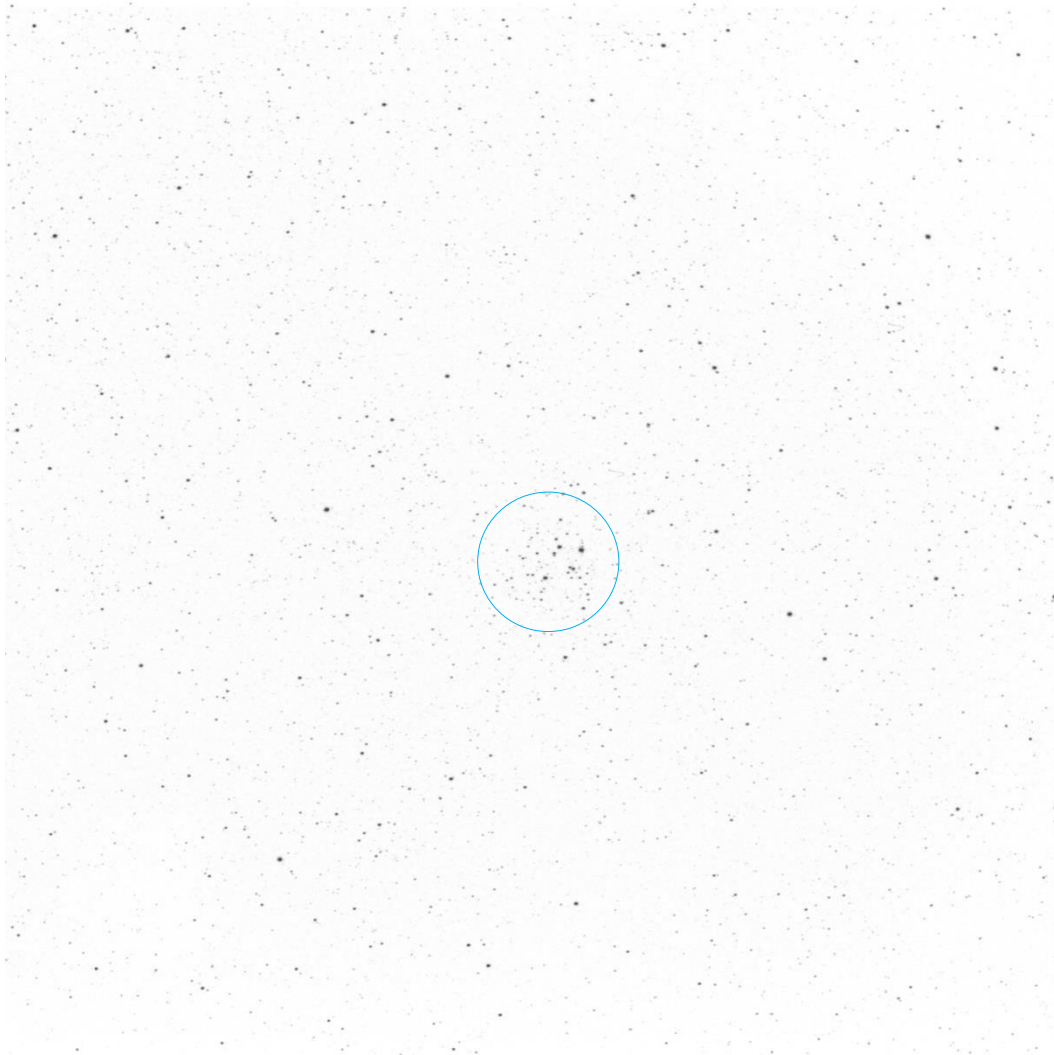

Visual Description      Small OC, little central concentration, less than 50 stars.

# Observation Log Sheet

Object	<b>M 26</b>	Date	9/2/23
Right Ascension (2000)	18h45m08s	Time	22:56
Declination (2000)	-09°23'00"	Sky: Transparency	Above Average
Constellation	Scutum	Seeing	Average
Magnitude	8.1	Location	West Columbia TX
Angular Diameter (')	7.0	Instrument	Astro Tech AT80ED
Concentration Class	II-3-m (I-1-m)	Camera	ZWO ASI183MC
Distance (ly)	5200	Sub Exposure (sec)	15
Diameter (ly)	11	Total Exposure (min)	6.5
		Image Software	SharpCap 4.0

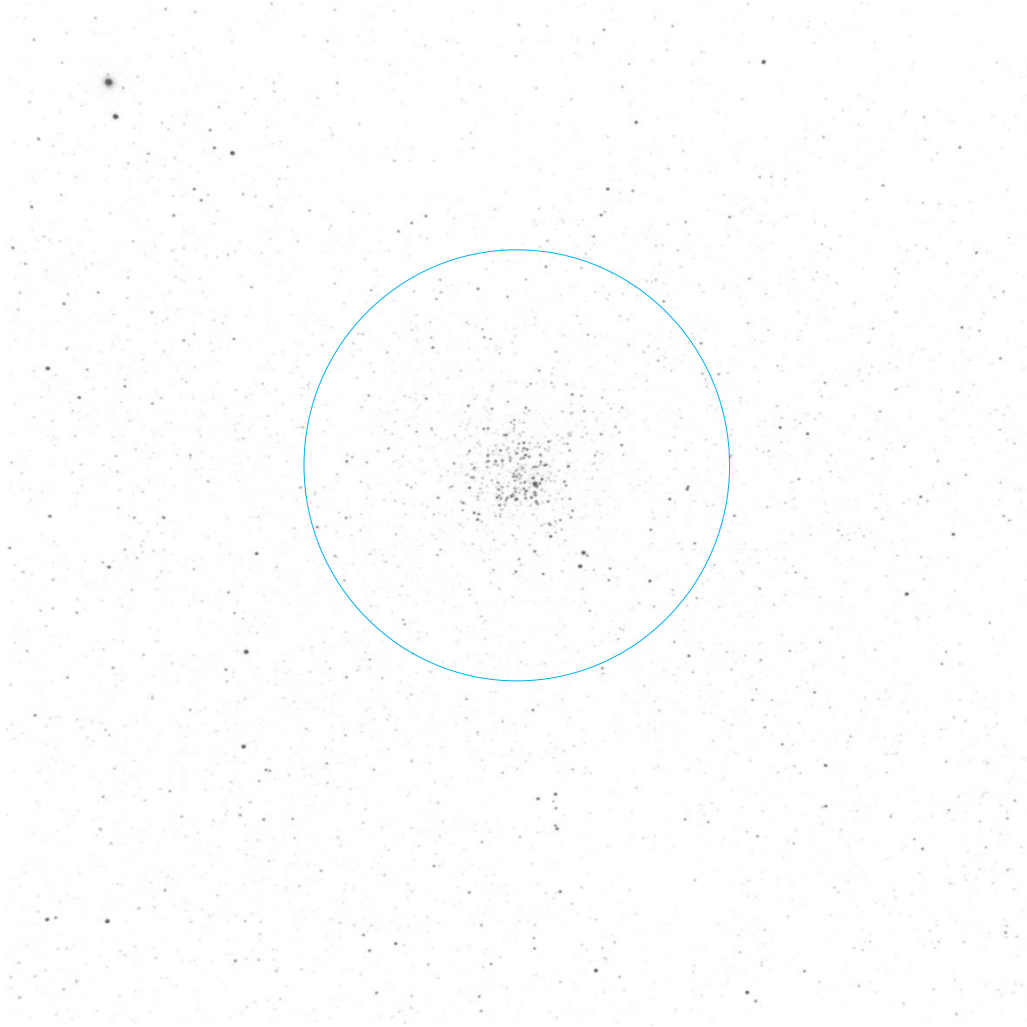

Visual Description      Small cluster with 50+ stars. Detached from field, but little central concentration.

# Observation Log Sheet

Object	<b>M 11</b>	Date	9/2/23
Right Ascension (2000)	18h51m05s	Time	22:56
Declination (2000)	-06°16'12"	Sky: Transparency	Above Average
Constellation	Scutum	Seeing	Average
Magnitude	5.2	Location	West Columbia TX
Angular Diameter (')	32.0	Instrument	Astro Tech AT80ED
Concentration Class	I-2-r (I-2-r)	Camera	ZWO ASI183MC
Distance (ly)	6100	Sub Exposure (sec)	15
Diameter (ly)	57	Total Exposure (min)	6.5
		Image Software	SharpCap 4.0

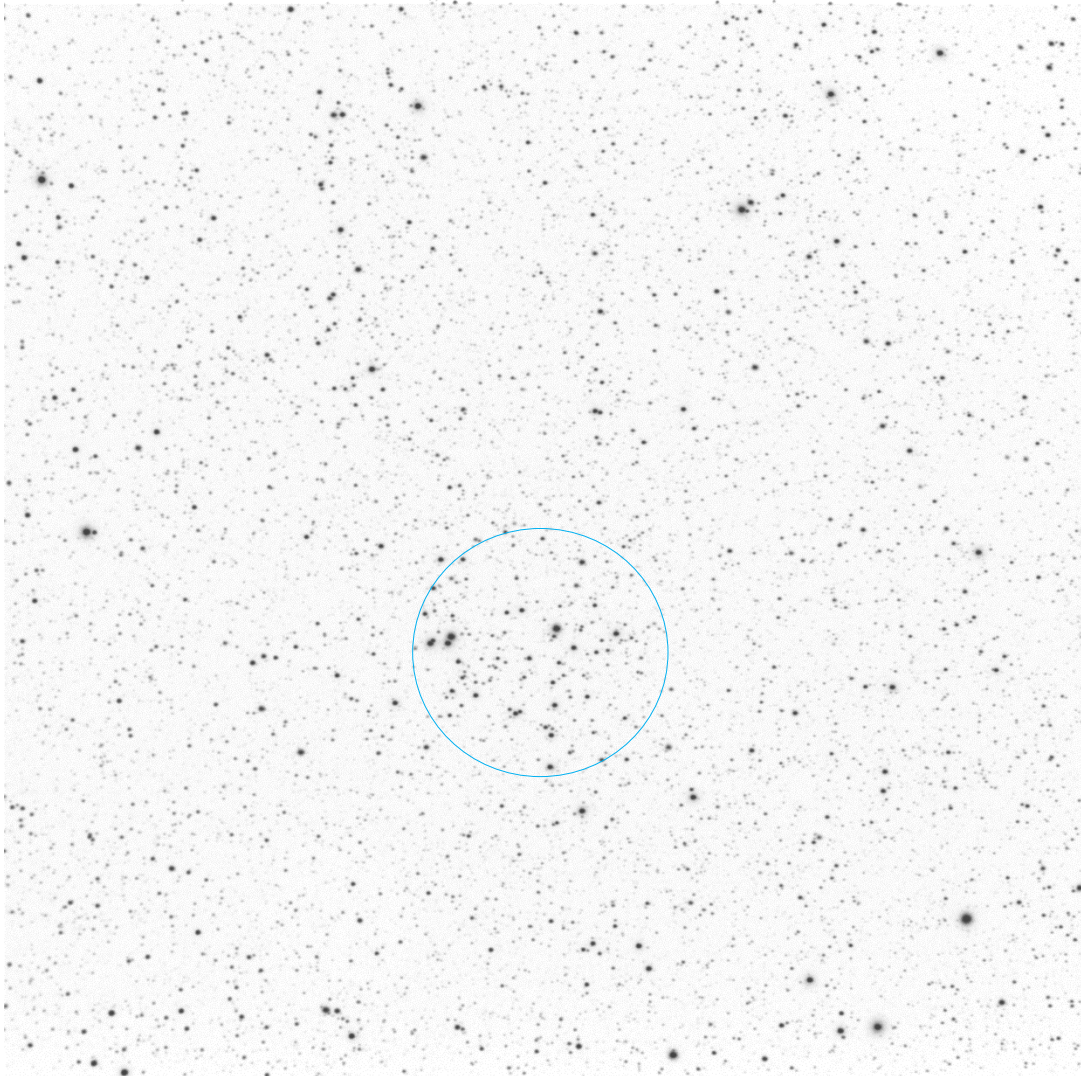

Visual Description      Very rich, highly concentrated cluster. > 50 brighter members, similar number of fainter ones.

# Observation Log Sheet

Object	<b>NGC 6709</b>	Date	9/4/23
Right Ascension (2000)	18h51m18s	Time	22:31
Declination (2000)	-10°19'06"	Sky: Transparency	Above Average
Constellation	Scutum	Seeing	Above Average
Magnitude	6.8	Location	West Columbia TX
Angular Diameter (')	14.0	Instrument	Astro Tech AT80ED
Concentration Class	III-1-p (III-2-m)	Camera	ZWO ASI183MC
Distance (ly)	3500	Sub Exposure (sec)	15
Diameter (ly)	14	Total Exposure (min)	6.5
		Image Software	SharpCap 4.0

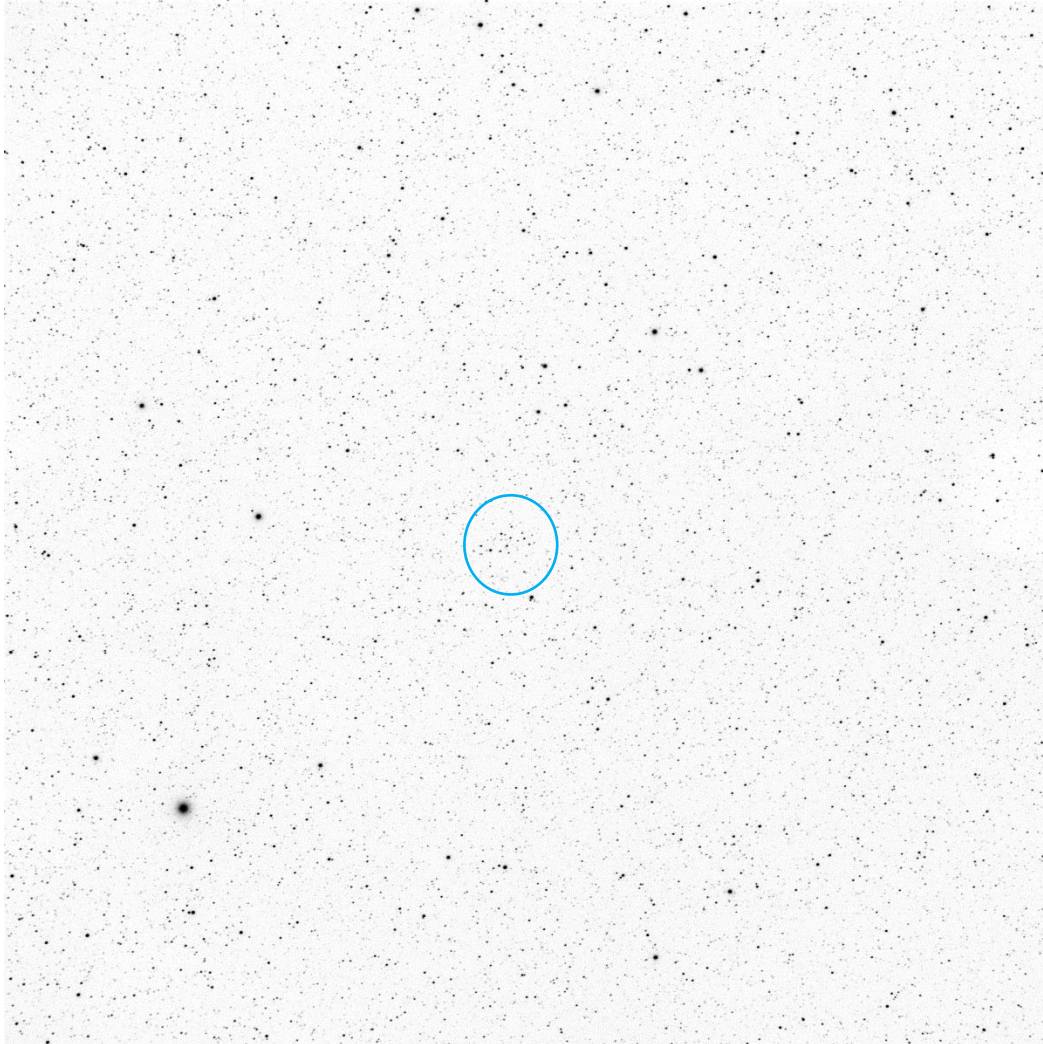

Visual Description      Custer is not well detached from field stars, except for the brightness of the stars. Little concentration.

# Observation Log Sheet

Object	<b>Ruprecht 146</b>	Date	7/15/24
Right Ascension (2000)	18h54m00s	Time	22:36
Declination (2000)	-21°03'13"	Sky: Transparency	Average
Constellation	Sagittarius	Seeing	Below Average
Magnitude	10.2	Location	West Columbia TX
Angular Diameter (')	4.0	Instrument	Astro Tech AT80ED
Concentration Class	III-1-p	Camera	ZWO ASI533MC
Distance (ly)		Sub Exposure (sec)	15
Diameter (ly)		Total Exposure (min)	15
		Image Software	SharpCap 4.0

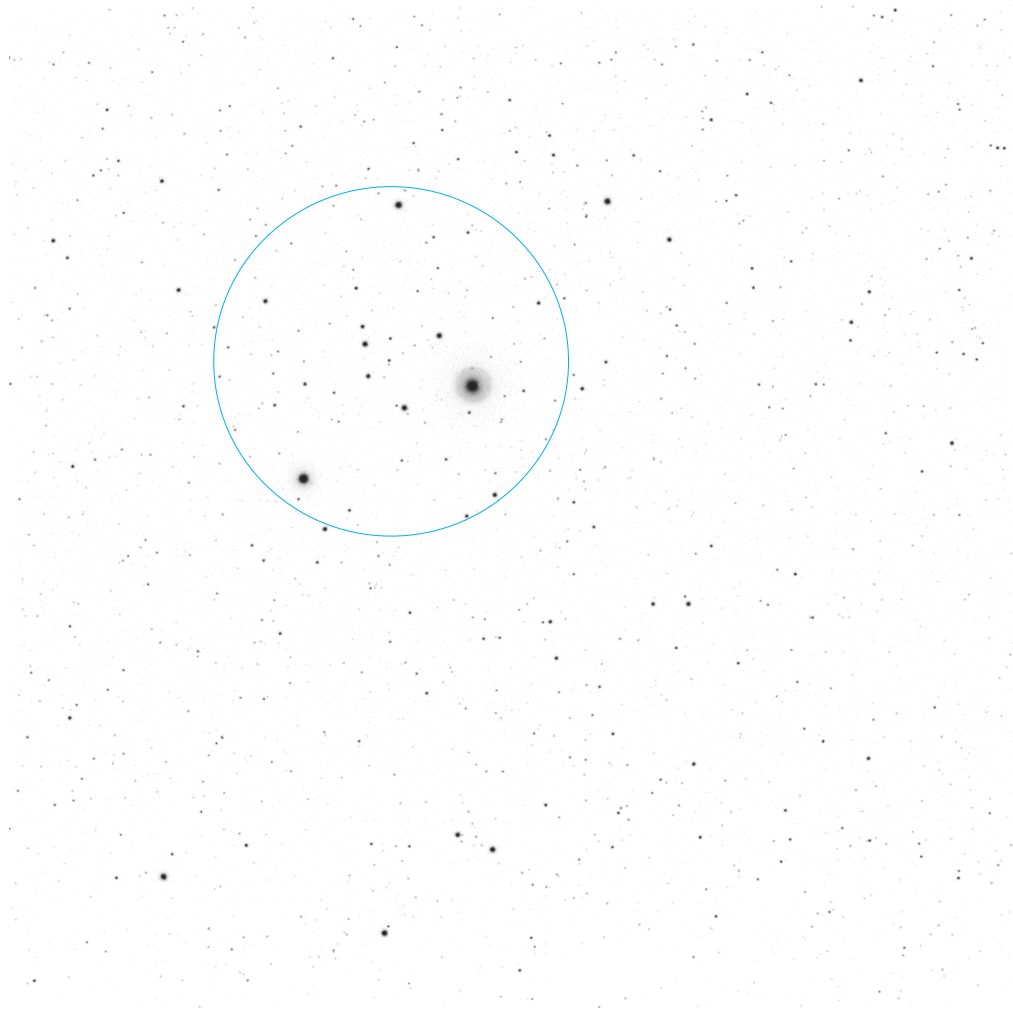

Visual Description      Very small cluster, < 5' in diameter. Less than 20 visible stars all similar brightness.

# Observation Log Sheet

Object	<b>Stephenson 1</b>	Date	9/4/23
Right Ascension (2000)	18h54m02s	Time	21:42
Declination (2000)	+36°53'03"	Sky: Transparency	Below Average
Constellation	Lyra	Seeing	Average
Magnitude	3.9	Location	West Columbia TX

Constellation	Cygnus	Seeing	Average
Magnitude	8.8	Location	West Columbia TX
Angular Diameter (')	5.6	Instrument	Astro Tech AT80ED
Concentration Class	II-2-p	Camera	ZWO ASI183MC
Distance (ly)		Sub Exposure (sec)	15
Diameter (ly)		Total Exposure (min)	3.25
		Image Software	SharpCap 4.0

Visual Description      Very small cluster of about 7 stars, ranging in brightness. Somewhat detached and concentrated.

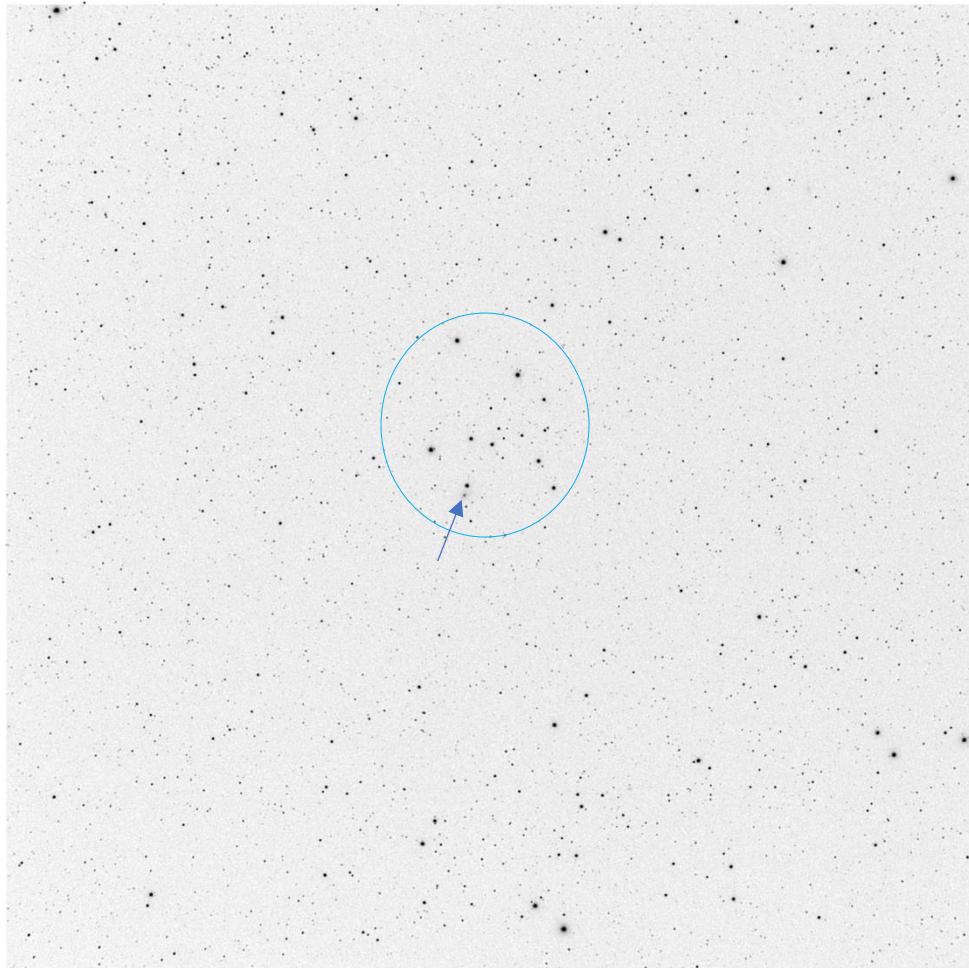

# Observation Log Sheet

Object	<b>Berkeley 90</b>	Date	10/12/23
Right Ascension (2000)	20h35m15s	Time	21:24
Declination (2000)	+46°50'35"	Sky: Transparency	Average
Constellation	Cygnus	Seeing	Average
Magnitude	10.6	Location	West Columbia TX
Angular Diameter (')	5.0	Instrument	Astro Tech AT80ED
Concentration Class	II-2-p	Camera	ZWO ASI183MC
Distance (ly)		Sub Exposure (sec)	15
Diameter (ly)		Total Exposure (min)	5.5
		Image Software	SharpCap 4.0
Visual Description	A very small cluster, dominated by two brighter stars and another dozen or so fainter ones. Somewhat detached, not well concentrated.		

# Observation Log Sheet

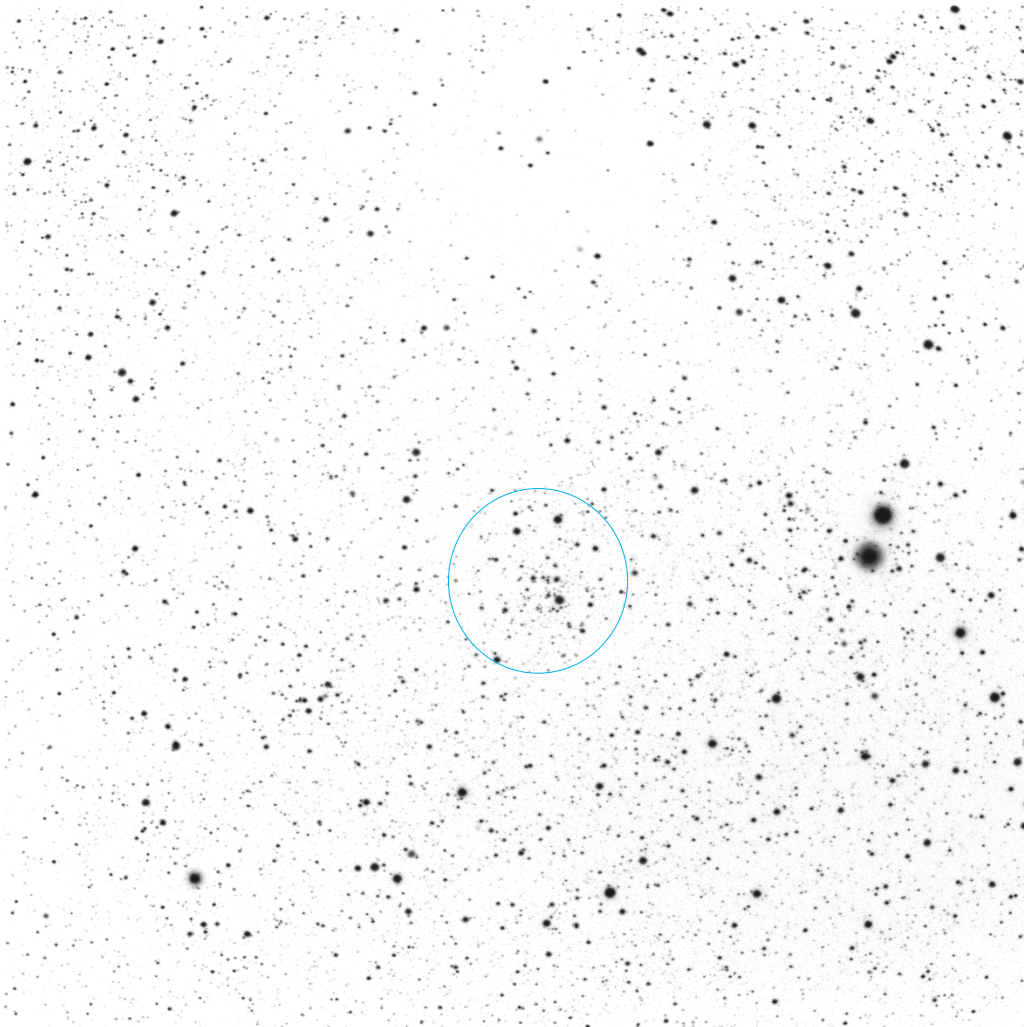

Object	<b>French 1</b>	Date	11/7/24
Right Ascension (2000)	21h07m22s	Time	19:41
Declination (2000)	+16°17'54"	Sky: Transparency	Average
Constellation	Delphinus	Seeing	Average
Magnitude	?	Location	West Columbia TX
Angular Diameter (')	13	Instrument	Astro Tech AT80ED
Concentration Class	II-2-p	Camera	ZWO ASI183MC
Distance (ly)		Sub Exposure (sec)	15
Diameter (ly)		Total Exposure (min)	4.75
		Image Software	SharpCap 4.0
Visual Description	About a dozen brighter stars, some concentration. There is a tiny galaxy at the edge of the cluster.		

# Observation Log Sheet

Object	<b>IC 1369</b>	Date	10/12/23
Right Ascension (2000)	21h12m06s	Time	21:31
Declination (2000)	+47°44'00"	Sky: Transparency	Average
Constellation	Cygnus	Seeing	Average
Magnitude	9.4	Location	West Columbia TX
Angular Diameter (')	5.0	Instrument	Astro Tech AT80ED
Concentration Class	II-2-m (I-1-m)	Camera	ZWO ASI183MC
Distance (ly)	6800	Sub Exposure (sec)	15
Diameter (ly)	10	Total Exposure (min)	5.25
		Image Software	SharpCap 4.0

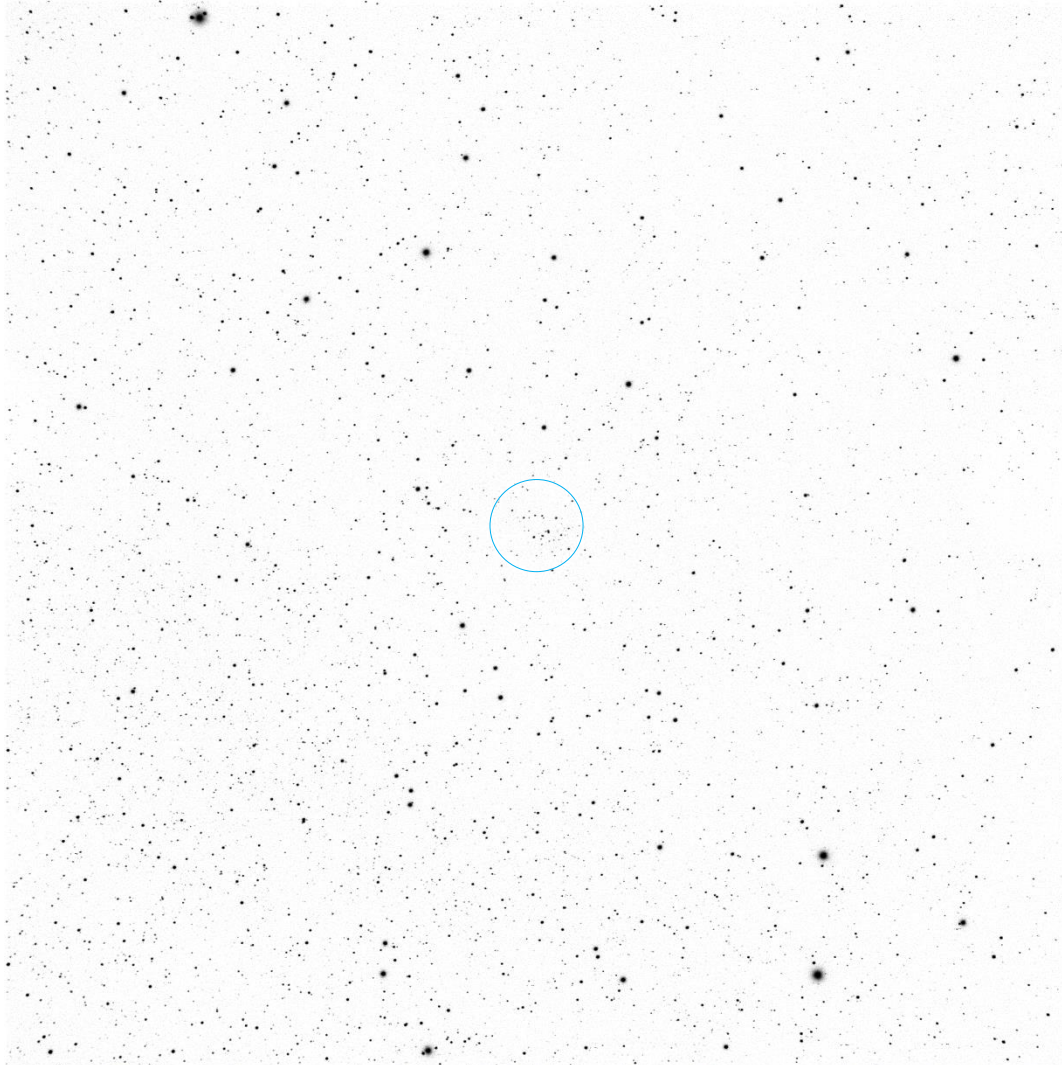

Visual Description      Small cluster, detached with some concentration. Medium range of brightness with about 50 members.

# Observation Log Sheet

Object	<b>Berkely 55</b>	Date	07/17/24
Right Ascension (2000)	21h17m50s	Time	00:10
Declination (2000)	+51°51'44"	Sky: Transparency	Below Average
Constellation	Cygnus	Seeing	Average
Magnitude	11.6	Location	West Columbia TX
Angular Diameter (')	5.0	Instrument	Astro Tech AT80ED
Concentration Class	IV-2-p	Camera	ZWO ASI533MC Pro
Distance (ly)		Sub Exposure (sec)	15
Diameter (ly)		Total Exposure (min)	6.5
		Image Software	SharpCap 4.0

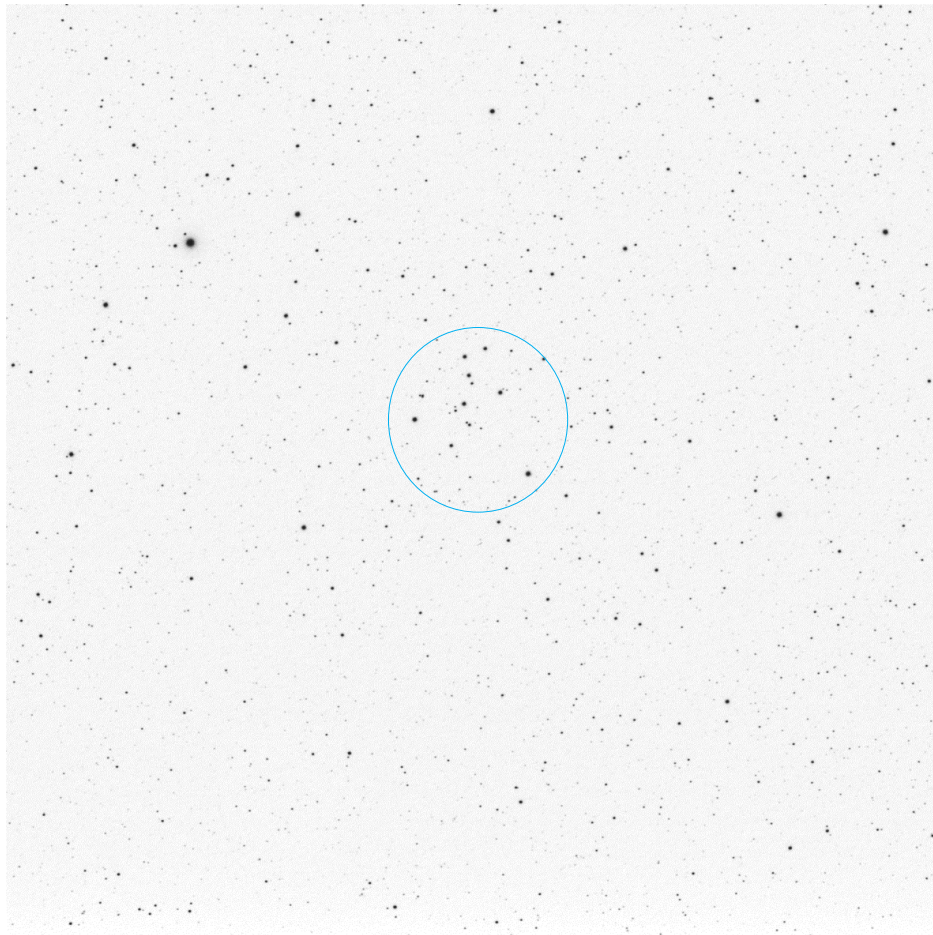

Visual Description      A very small open cluster of less than 20 visible stars, all similar in brightness forming 'V' shape.

# Observation Log Sheet

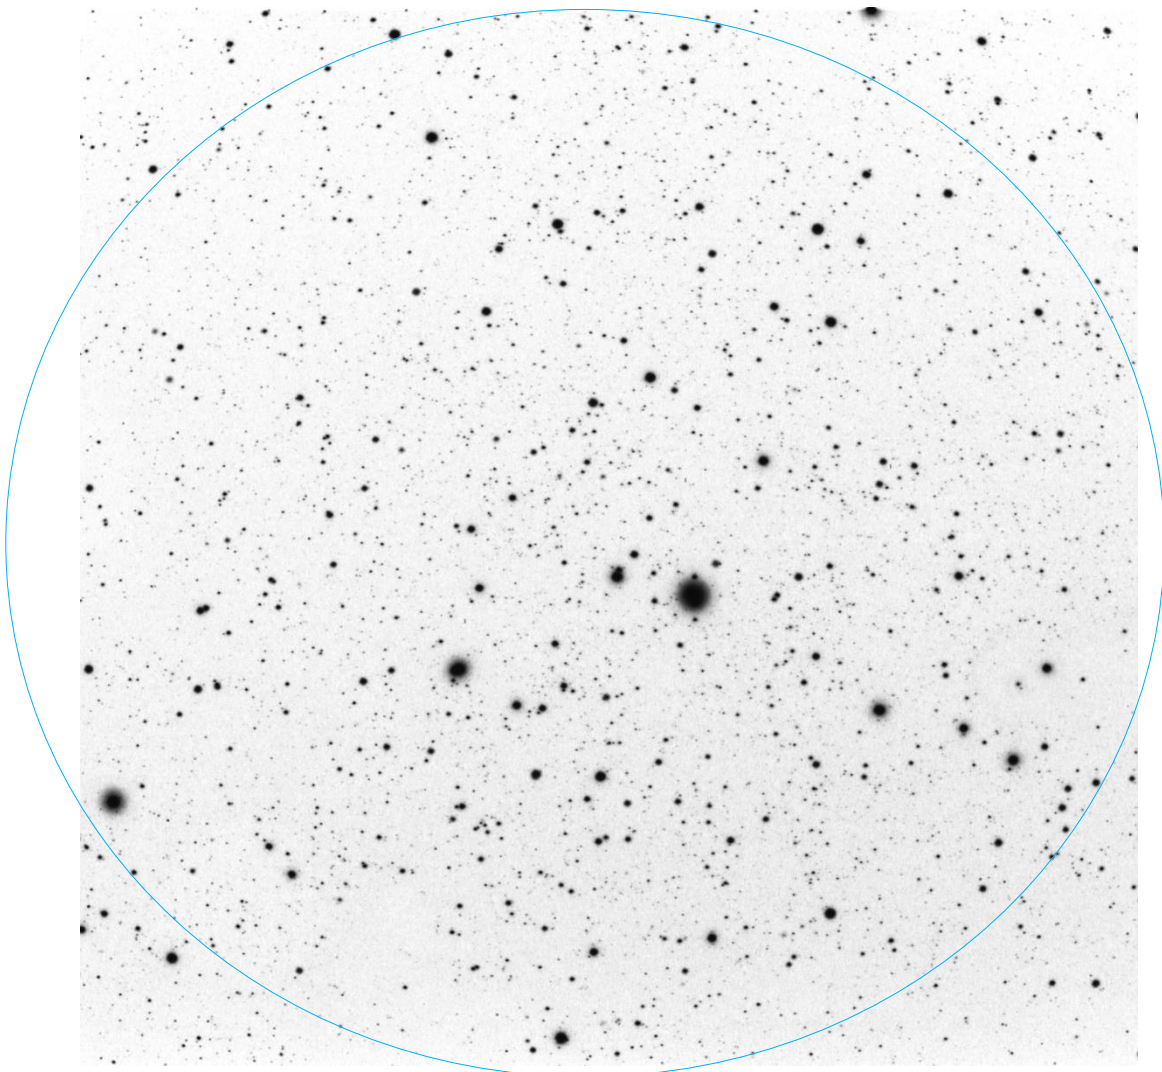

Object	<b>NGC 7063</b>	Date	9/23/23
Right Ascension (2000)	21h24m21s	Time	22:19
Declination (2000)	+36°29'12"	Sky: Transparency	Below Average
Constellation	Cygnus	Seeing	Average
Magnitude	8.0	Location	West Columbia TX
Angular Diameter (')	9.0	Instrument	Astro Tech AT80ED
Concentration Class	III-2-p (III-2-p)	Camera	ZWO ASI183MC
Distance (ly)	2200	Sub Exposure (sec)	15
Diameter (ly)	6	Total Exposure (min)	3.25
		Image Software	SharpCap 4.0

Visual Description      Medium size cluster, less than 50 members with a range of brightness. Somewhat detached but not concentrated.

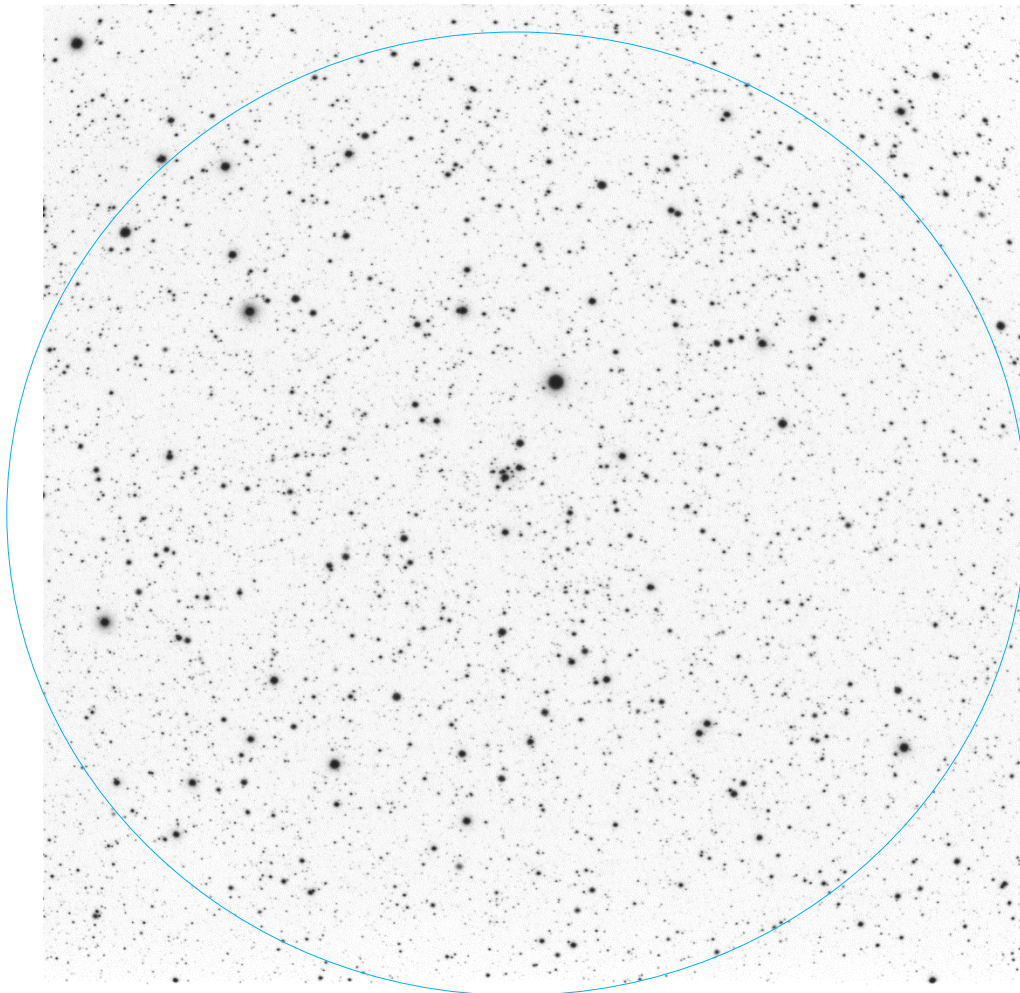

# Observation Log Sheet

Object	<b>IC 1396</b>	Date	10/12/23
Right Ascension (2000)	21h39m06s	Time	21:38
Declination (2000)	+57°30'00"	Sky: Transparency	Average
Constellation	Cygnus	Seeing	Average
Magnitude		Location	West Columbia TX
Angular Diameter (')	89	Instrument	Astro Tech AT80ED
Concentration Class	II-1-p (II-3-m)	Camera	ZWO ASI183MC
Distance (ly)		Sub Exposure (sec)	15
Diameter (ly)		Total Exposure (min)	
		Image Software	SharpCap 4.0
Visual Description	Large cluster, detached not well concentrated. 5 brighter stars spread across in W to east direction.		

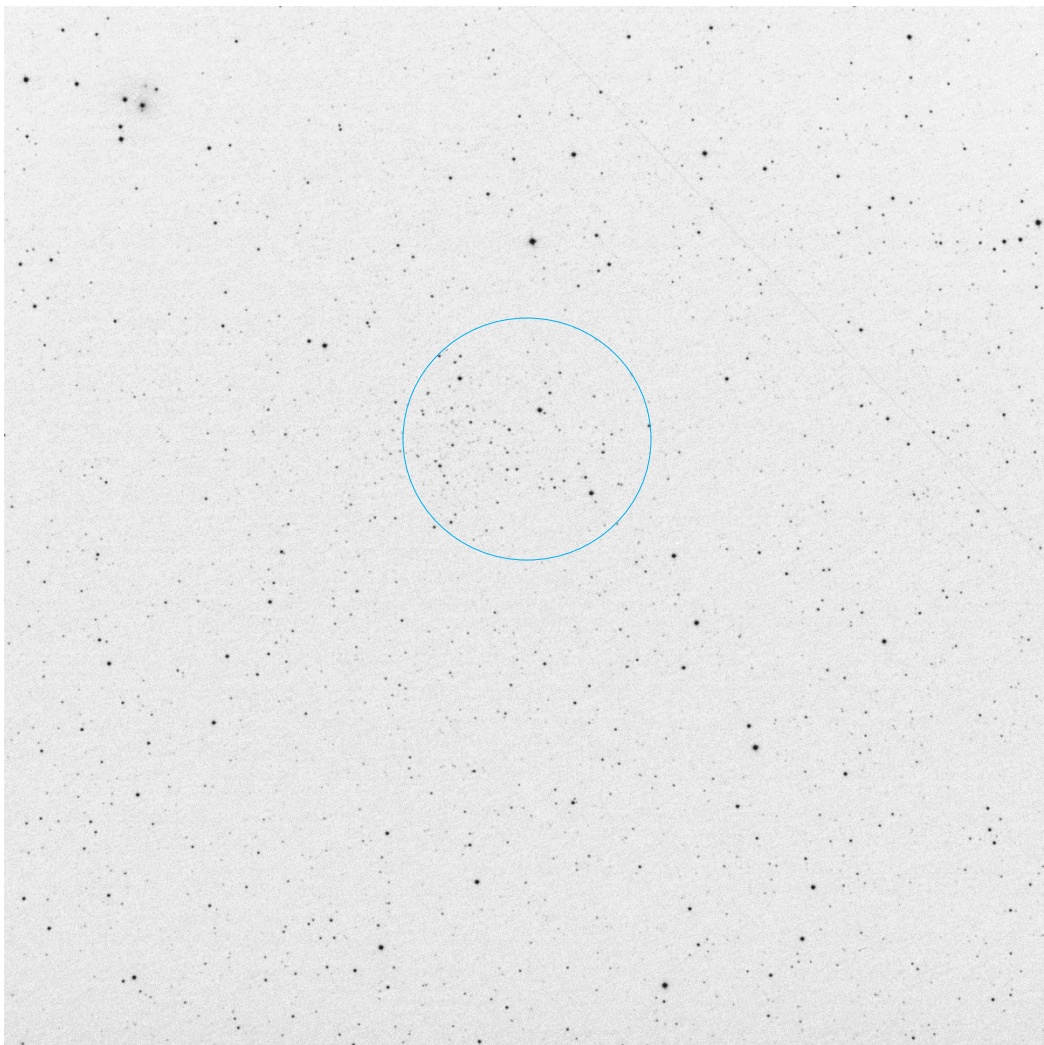

# Observation Log Sheet

Object	<b>Berkeley 94</b>	Date	10/12/23
Right Ascension (2000)	21h39m50s	Time	22:13
Declination (2000)	+57°36'40"	Sky: Transparency	Average
Constellation	Cygnus	Seeing	Average
Magnitude		Location	West Columbia TX
Angular Diameter (')	89.0	Instrument	Astro Tech AT80ED
Concentration Class	III-2-p	Camera	ZWO ASI183MC
Distance (ly)	2200	Sub Exposure (sec)	15
Diameter (ly)	6	Total Exposure (min)	6.25
		Image Software	SharpCap 4.0
Visual Description	Large cluster not detached nor concentrated. 5 brighter stars spread across in W to east direction.		

# Observation Log Sheet

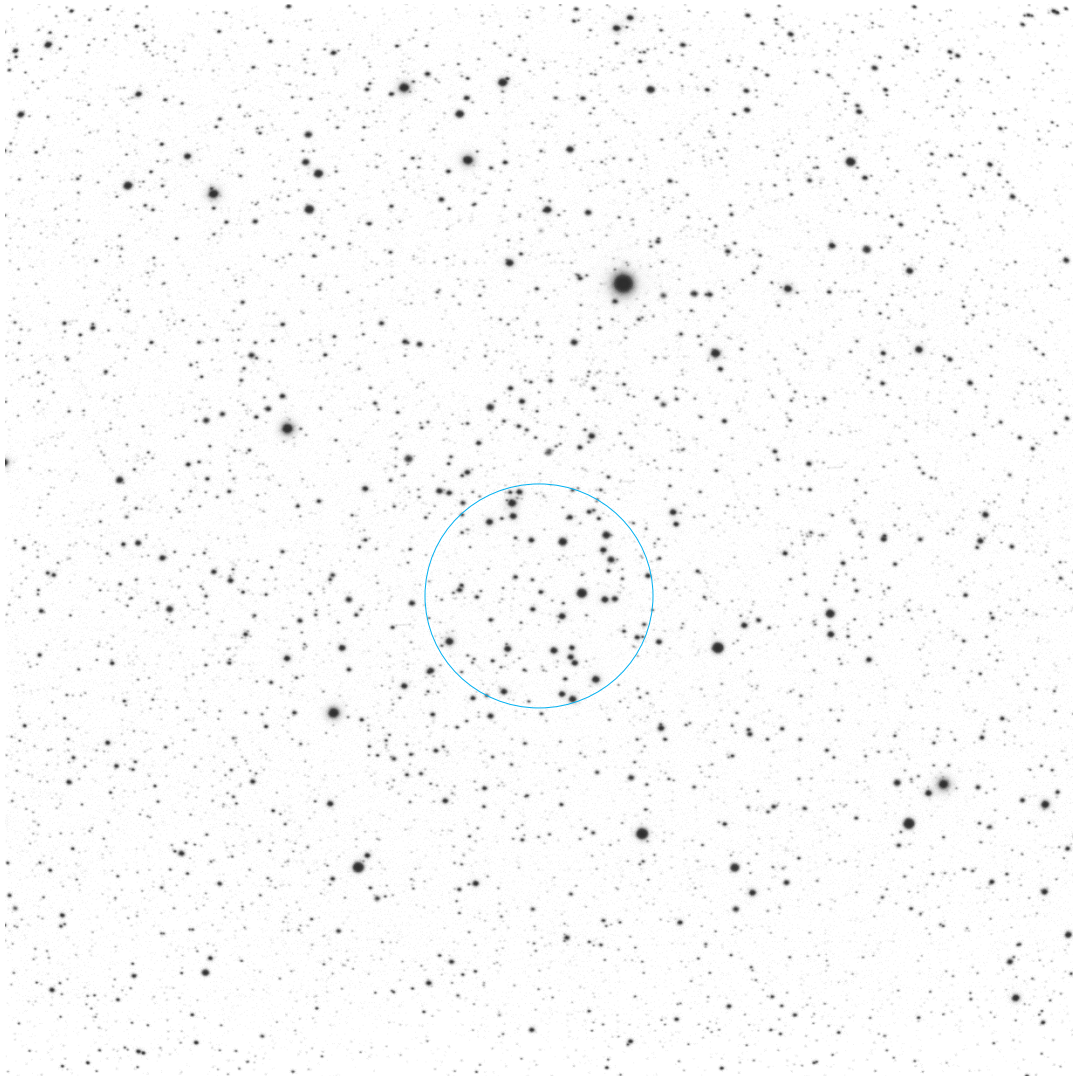

Object	<b>NGC 7142</b>	Date	10/17/23
Right Ascension (2000)	21h45m09s	Time	20:14
Declination (2000)	+65°46'30"	Sky: Transparency	Average
Constellation	Cephus	Seeing	Average
Magnitude	8.6	Location	West Columbia TX
Angular Diameter (')	12.0	Instrument	Astro Tech AT80ED
Concentration Class	III-1-m	Camera	ZWO ASI183MC
Distance (ly)	5500	Sub Exposure (sec)	15
Diameter (ly)	19	Total Exposure (min)	4.0
		Image Software	SharpCap 4.0
Visual Description	Medium sized cluster of about 50 members. Little detachment. NGC7129 is visible to the upper left in the image.		

# Observation Log Sheet

Object	<b>NGC 7209</b>	Date	10/12/23
Right Ascension (2000)	22h05m07s	Time	21:58
Declination (2000)	+46°29'00"	Sky: Transparency	Average
Constellation	Lacerta	Seeing	Average
Magnitude	7.0	Location	West Columbia TX
Angular Diameter (')	14.0	Instrument	Astro Tech AT80ED
Concentration Class	III-2-p (III-1-p)	Camera	ZWO ASI183MC
Distance (ly)	3800	Sub Exposure (sec)	15
Diameter (ly)	16	Total Exposure (min)	4.5
		Image Software	SharpCap 4.0

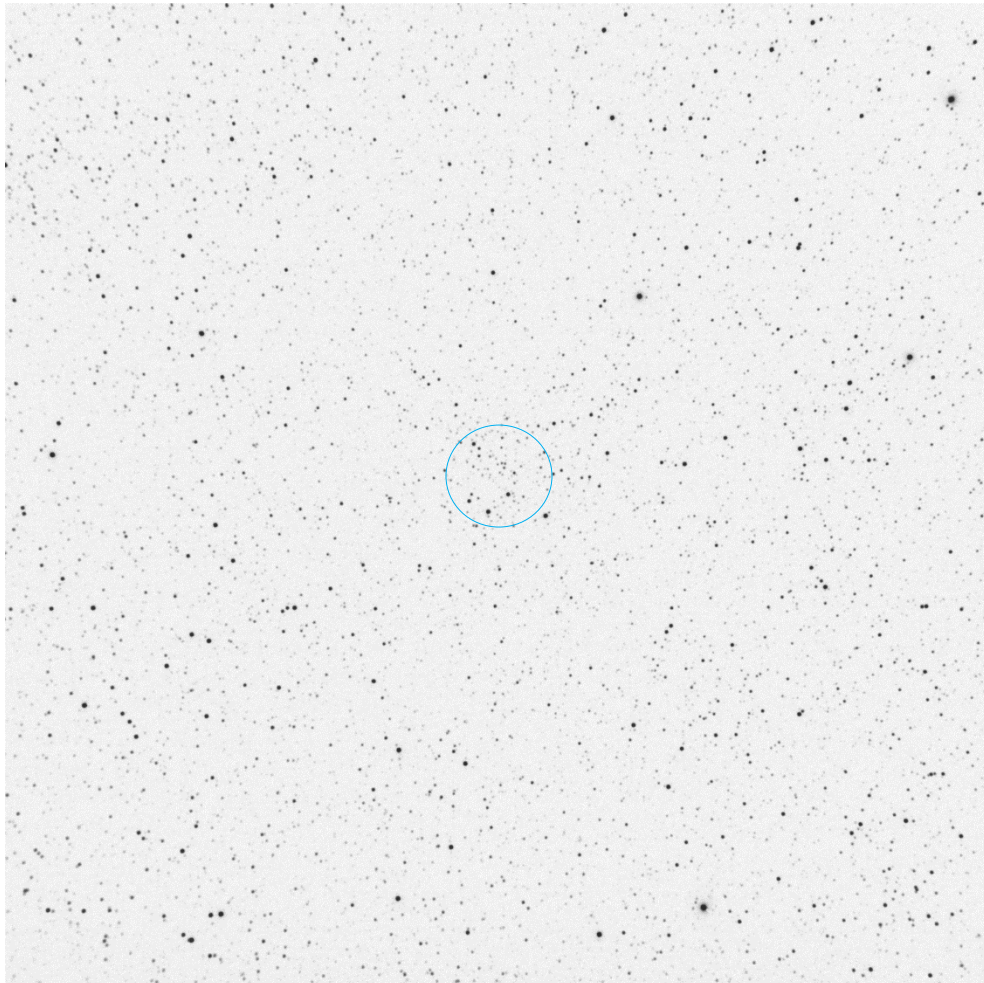

Visual Description      Grouping of about 30 to 40 stars. Cluster not well detached or centralized.

# Observation Log Sheet

Object	<b>IC 1434</b>	Date	10/16/23
Right Ascension (2000)	22h10m30s	Time	20:29
Declination (2000)	+52°00'00"	Sky: Transparency	Average
Constellation	Lacerta	Seeing	Average
Magnitude	9.0	Location	West Columbia TX
Angular Diameter (')	6.0	Instrument	Astro Tech AT80ED
Concentration Class	III-3-p	Camera	ZWO ASI183MC
Distance (ly)		Sub Exposure (sec)	15
Diameter (ly)		Total Exposure (min)	4.5
		Image Software	SharpCap 4.0

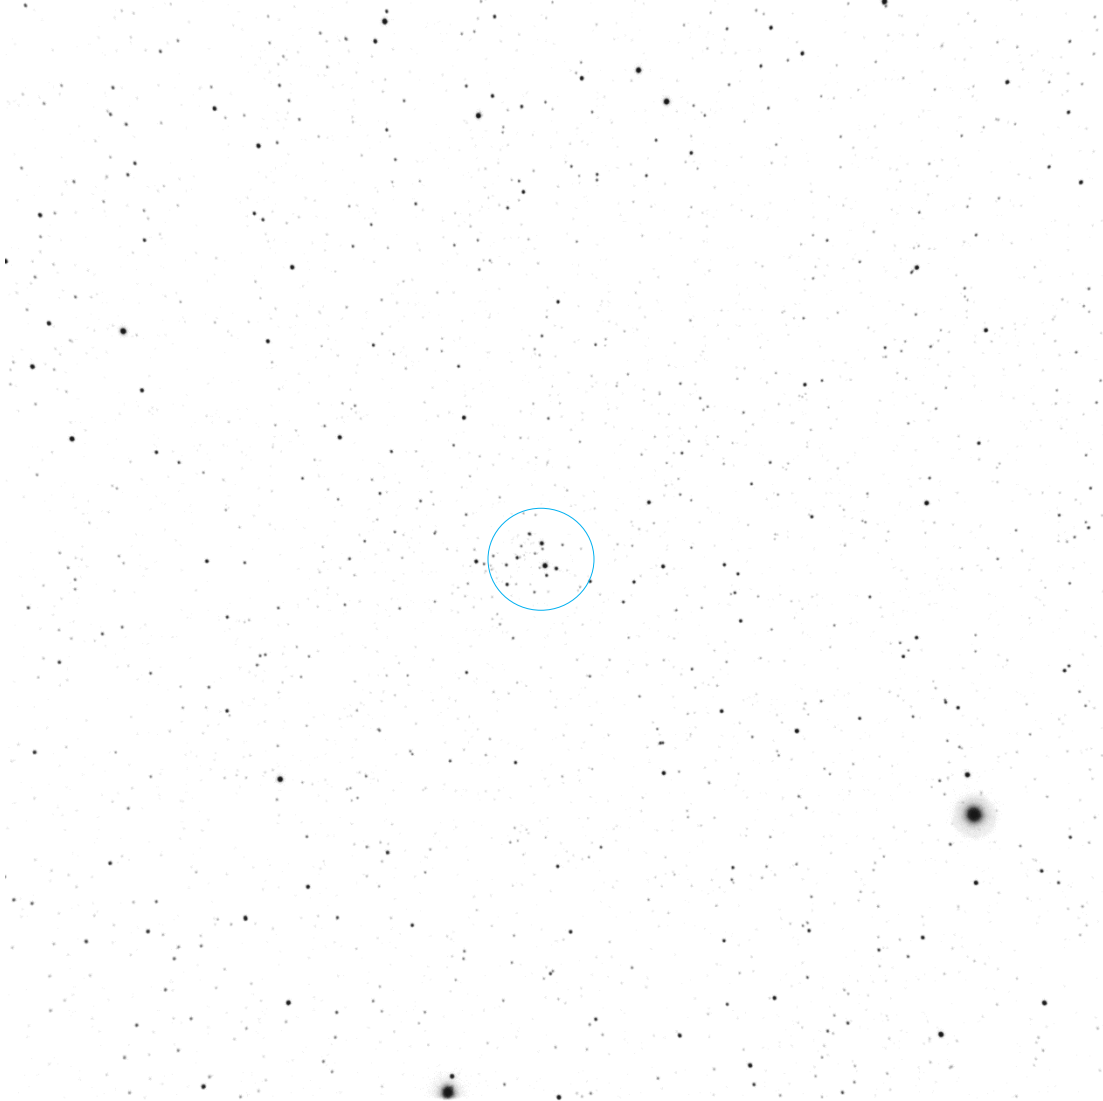

Visual Description      Very small cluster with little detachment and poor centralization.

# Observation Log Sheet

Object	<b>NGC 7235</b>	Date	10/16/23
Right Ascension (2000)	22h12m25s	Time	21:34
Declination (2000)	+57°16'12"	Sky: Transparency	Average
Constellation	Cephus	Seeing	Average
Magnitude	8.8	Location	West Columbia TX
Angular Diameter (')	5.0	Instrument	Astro Tech AT80ED
Concentration Class	II-2-p (III-2-p)	Camera	ZWO ASI183MC
Distance (ly)	9200	Sub Exposure (sec)	15
Diameter (ly)	13	Total Exposure (min)	4.5
		Image Software	SharpCap 4.0

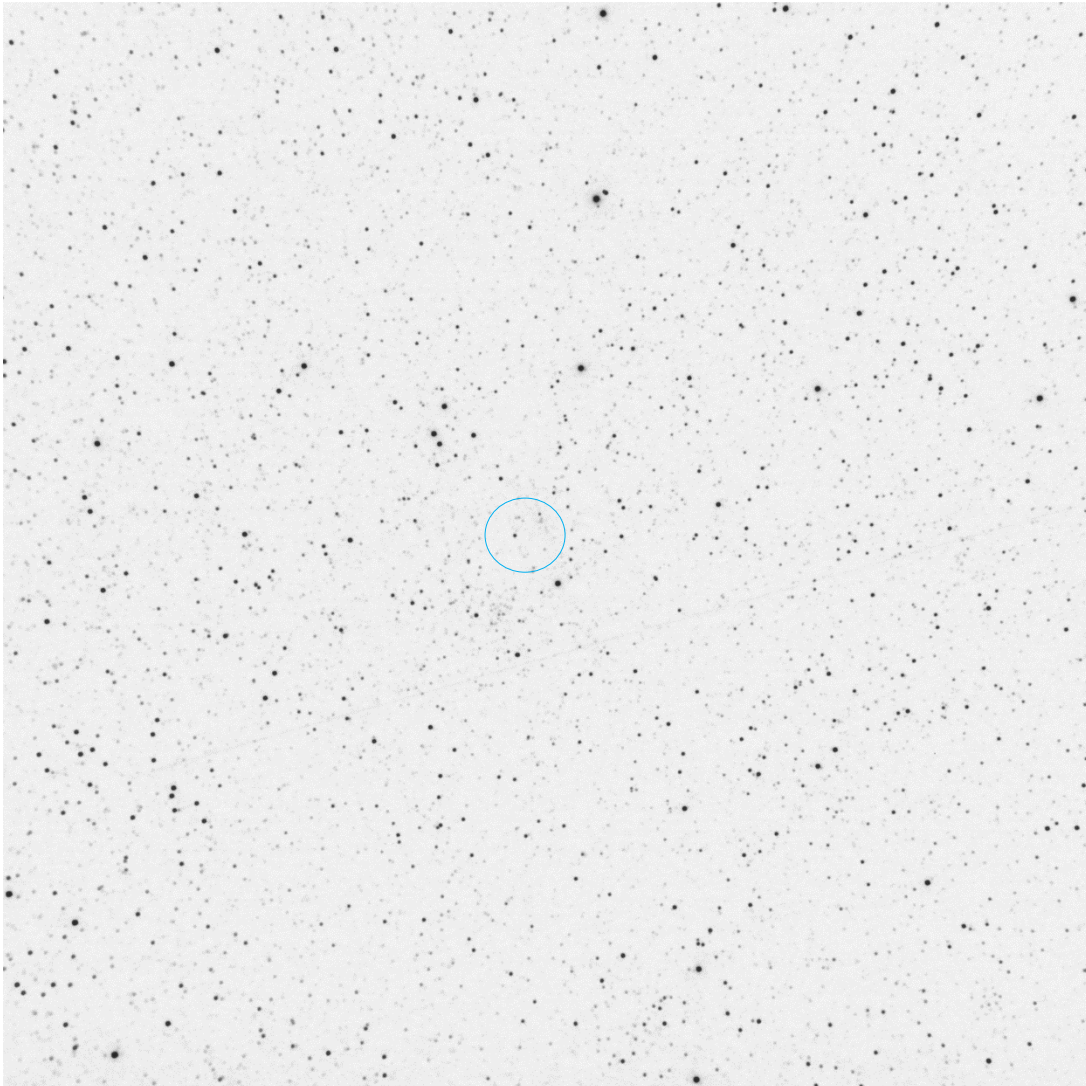

Visual Description      Small cluster of < 50 stars. Well detached with some centralization.

# Observation Log Sheet

Object	<b>King 9</b>	Date	10/16/23
Right Ascension (2000)	22h15m30s	Time	20:21
Declination (2000)	+54°24'00"	Sky: Transparency	Average
Constellation	Lacerta	Seeing	Average
Magnitude	11.6	Location	West Columbia TX
Angular Diameter (')	3.0	Instrument	Astro Tech AT80ED
Concentration Class	IV-1-p	Camera	ZWO ASI183MC
Distance (ly)		Sub Exposure (sec)	15
Diameter (ly)		Total Exposure (min)	4.5
		Image Software	SharpCap 4.0

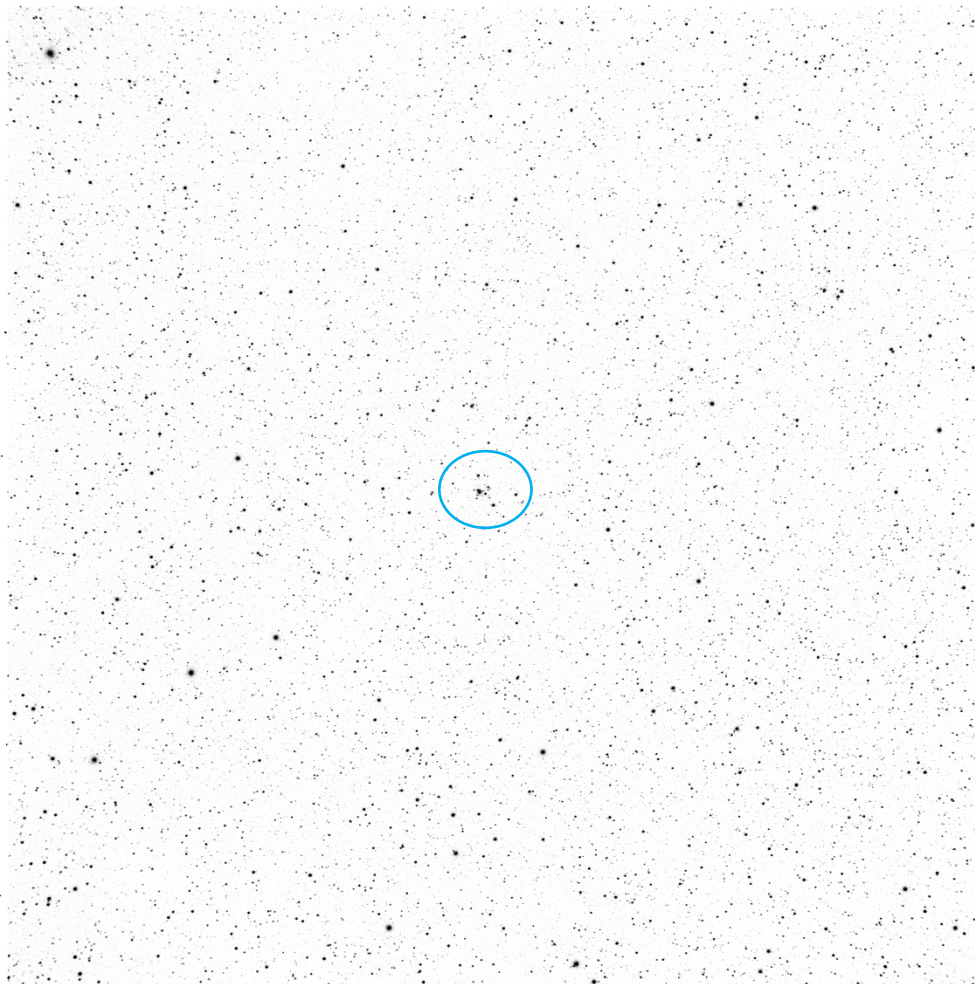

Visual Description      Tiny cluster, not noticeable from field stars.

# Observation Log Sheet

Object	<b>Berkeley 96</b>	Date	7/16/24
Right Ascension (2000)	22h30m22s	Time	00:22
Declination (2000)	+55°31'20"	Sky: Transparency	Below Average
Constellation	Lacerta	Seeing	Average
Magnitude	13	Location	West Columbia TX
Angular Diameter (')	2.0	Instrument	Astro Tech AT80ED
Concentration Class	II-2-p	Camera	ZWO ASI533MC Pro
Distance (ly)		Sub Exposure (sec)	15
Diameter (ly)		Total Exposure (min)	4.5
		Image Software	SharpCap 4.0

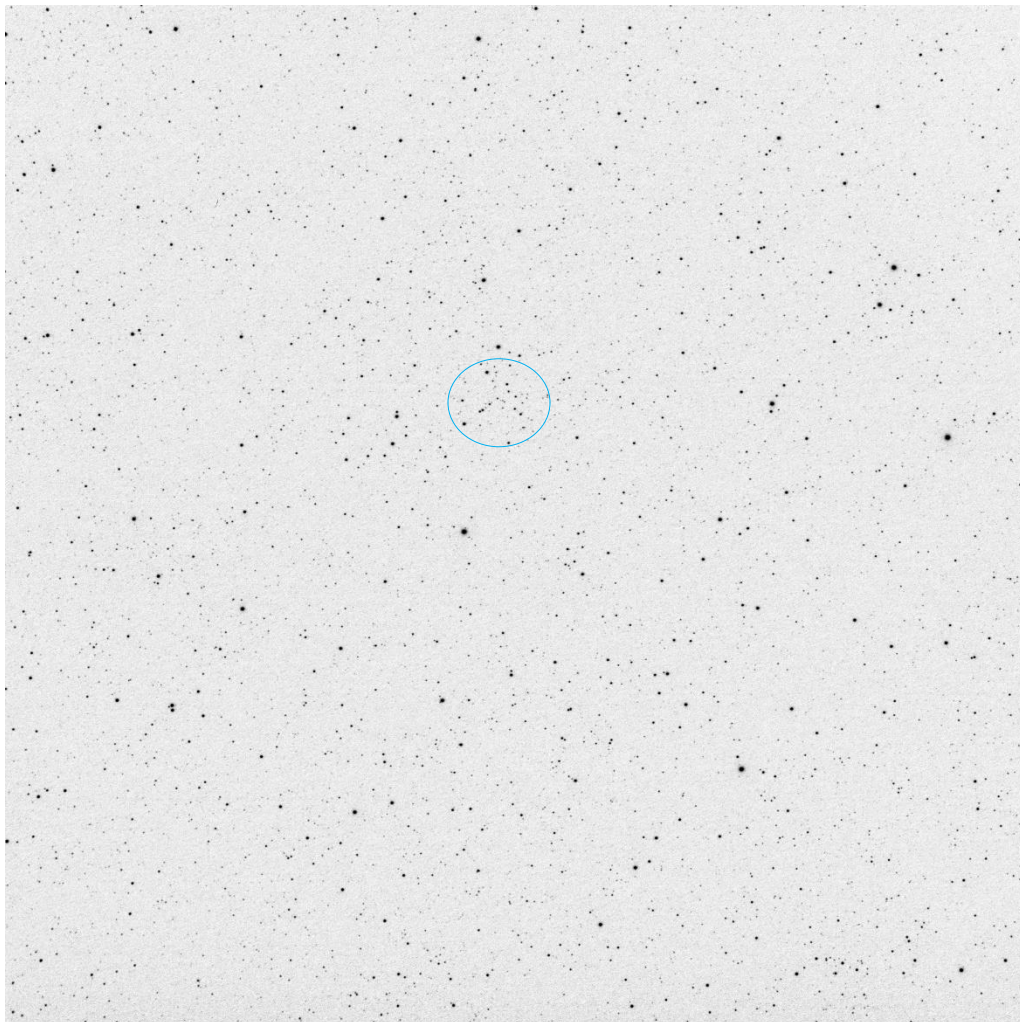

Visual Description      OC is not really detached from the field stars. Approximately 10 stars appear in the position from the chart, all similar in brightness.

# Observation Log Sheet

Object	<b>King 18</b>	Date	10/21/23
Right Ascension (2000)	22h52m06s	Time	20:27
Declination (2000)	+58°17'00"	Sky: Transparency	Average
Constellation	Cephus	Seeing	Average
Magnitude	9.8	Location	West Columbia TX
Angular Diameter (')	5.0	Instrument	Astro Tech AT80ED
Concentration Class	II-3-p	Camera	ZWO ASI183MC
Distance (ly)		Sub Exposure (sec)	15
Diameter (ly)		Total Exposure (min)	5.0
		Image Software	SharpCap 4.0

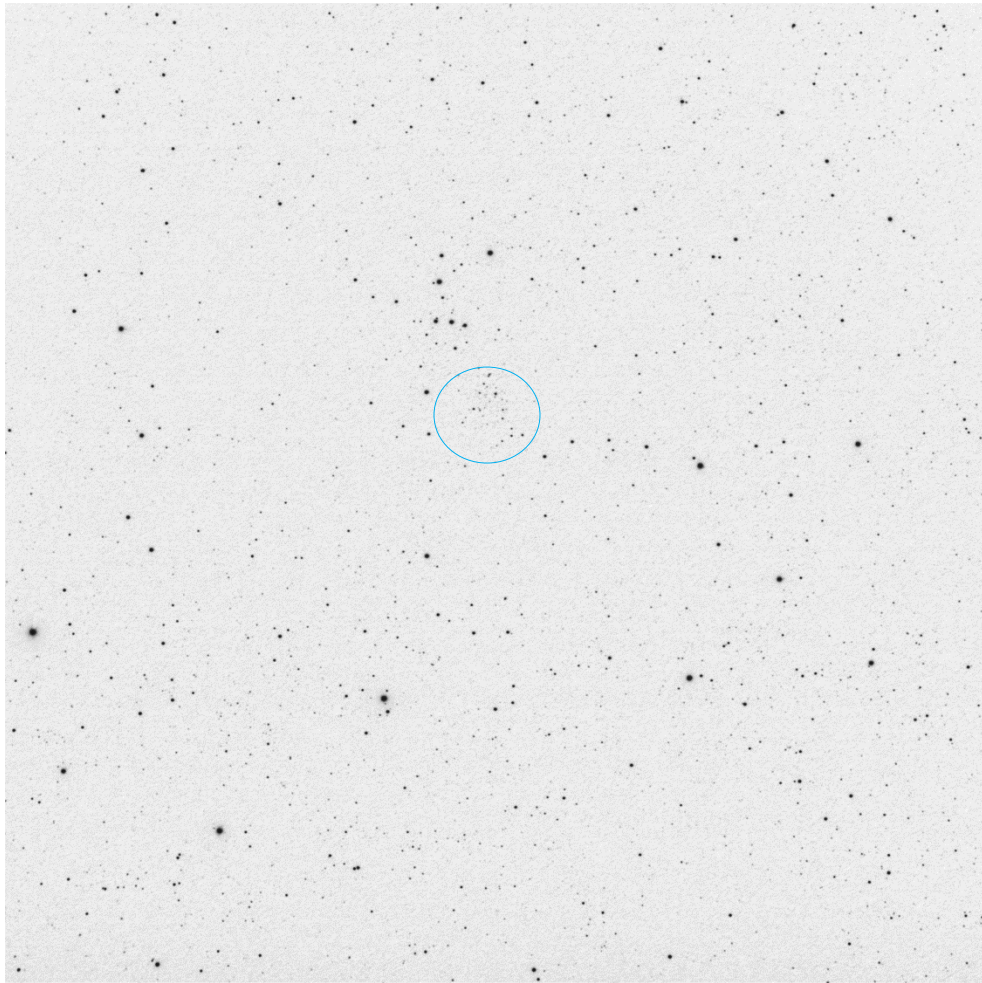

Visual Description      Small cluster with about a dozen brighter stars and then half that many fainter ones.

# Observation Log Sheet

Object	<b>King 10</b>	Date	10/12/23
Right Ascension (2000)	22h54m54s	Time	22:27
Declination (2000)	+59°10'00"	Sky: Transparency	Average
Constellation	Cepheus	Seeing	Average
Magnitude	10.7	Location	West Columbia TX
Angular Diameter (')	4.0	Instrument	Astro Tech AT80ED
Concentration Class	II-1-p	Camera	ZWO ASI183MC
Distance (ly)	11000	Sub Exposure (sec)	15
Diameter (ly)	13	Total Exposure (min)	6.25
		Image Software	SharpCap 4.0

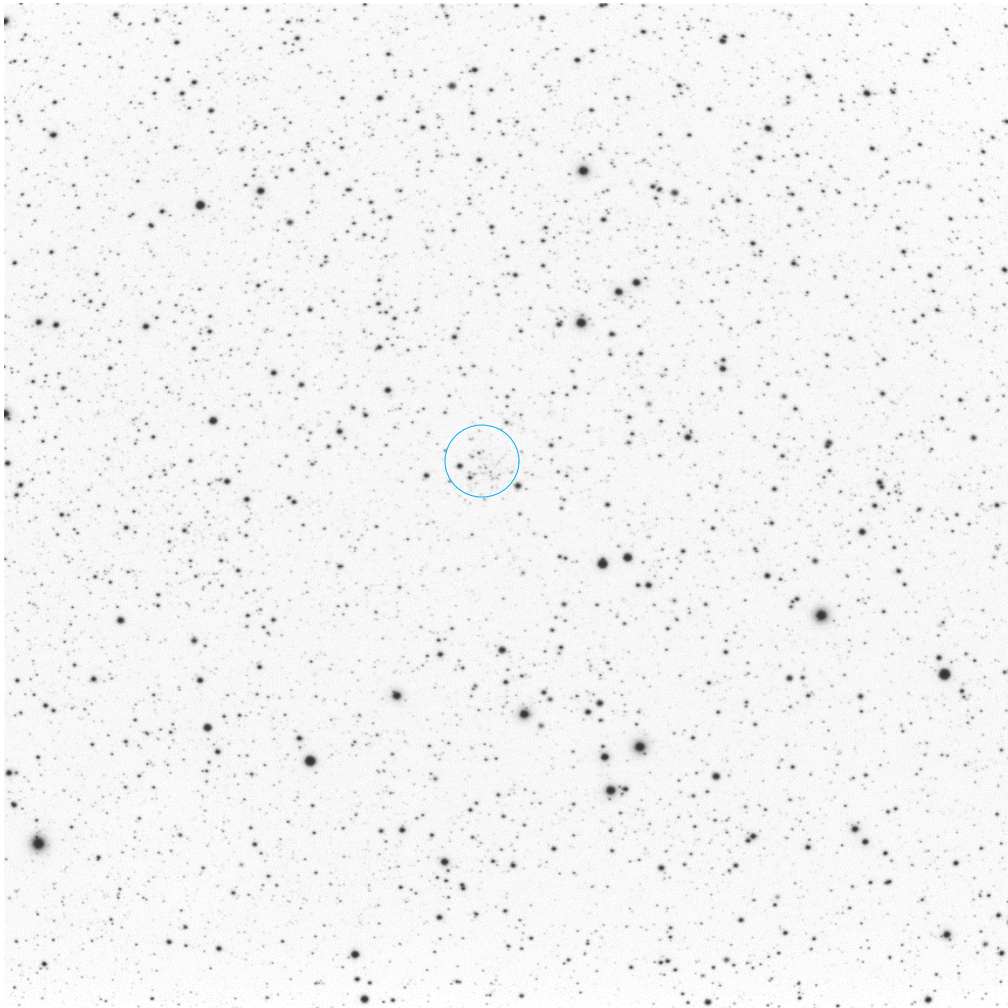

Visual Description      Detached with little concentration. Cluster is located just below three brighter stars and is arrow shaped.

# Observation Log Sheet

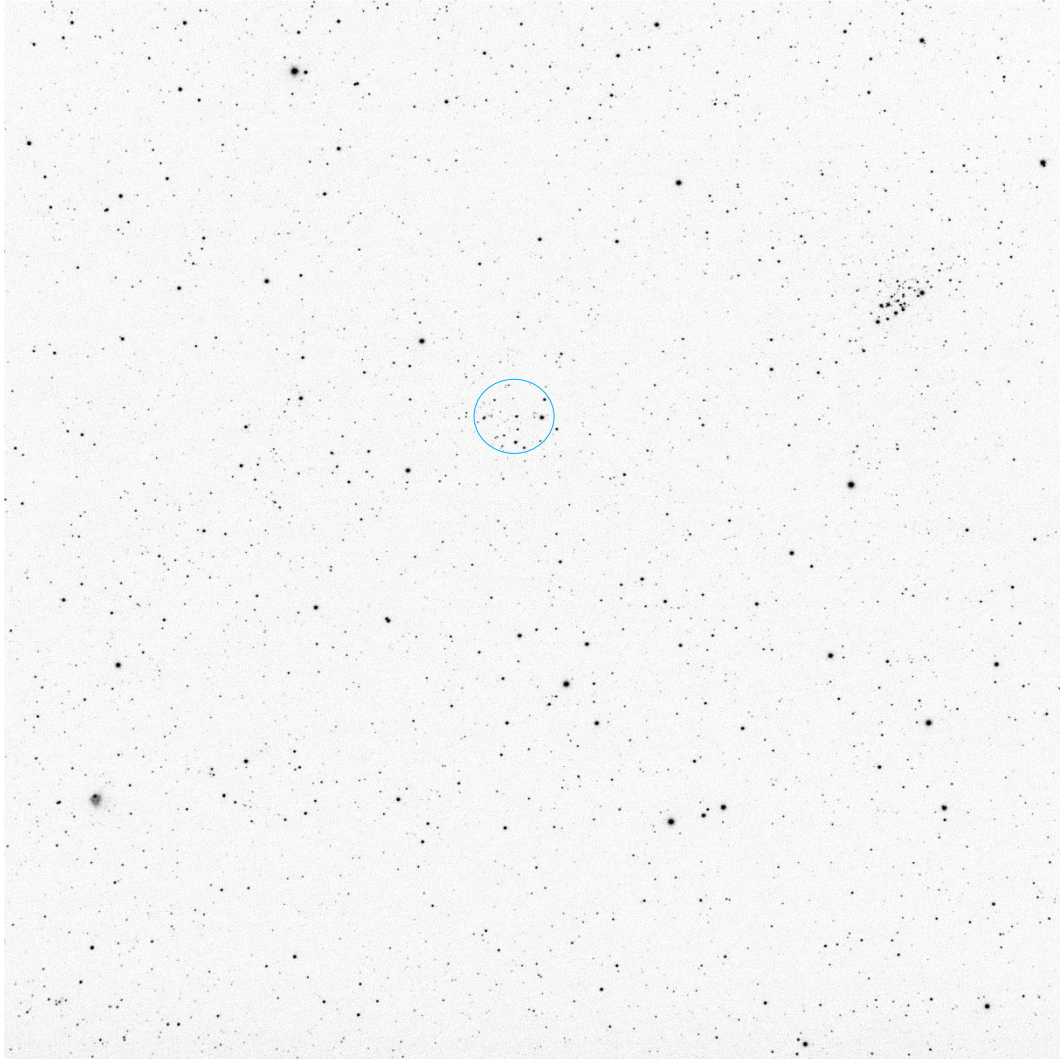

Object	<b>NGC 7423</b>	Date	10/12/23
Right Ascension (2000)	22h55m08s	Time	20:19
Declination (2000)	+57°05'48"	Sky: Transparency	Average
Constellation	Cepheus	Seeing	Average
Magnitude	10.3	Location	West Columbia TX
Angular Diameter (')	5.0	Instrument	Astro Tech AT80ED
Concentration Class	IV-3-p	Camera	ZWO ASI183MC
Distance (ly)		Sub Exposure (sec)	15
Diameter (ly)		Total Exposure (min)	6.25
		Image Software	SharpCap 4.0

Visual Description      Very small cluster, not well detached. Only a dozen visible members dominated by two brighter ones.

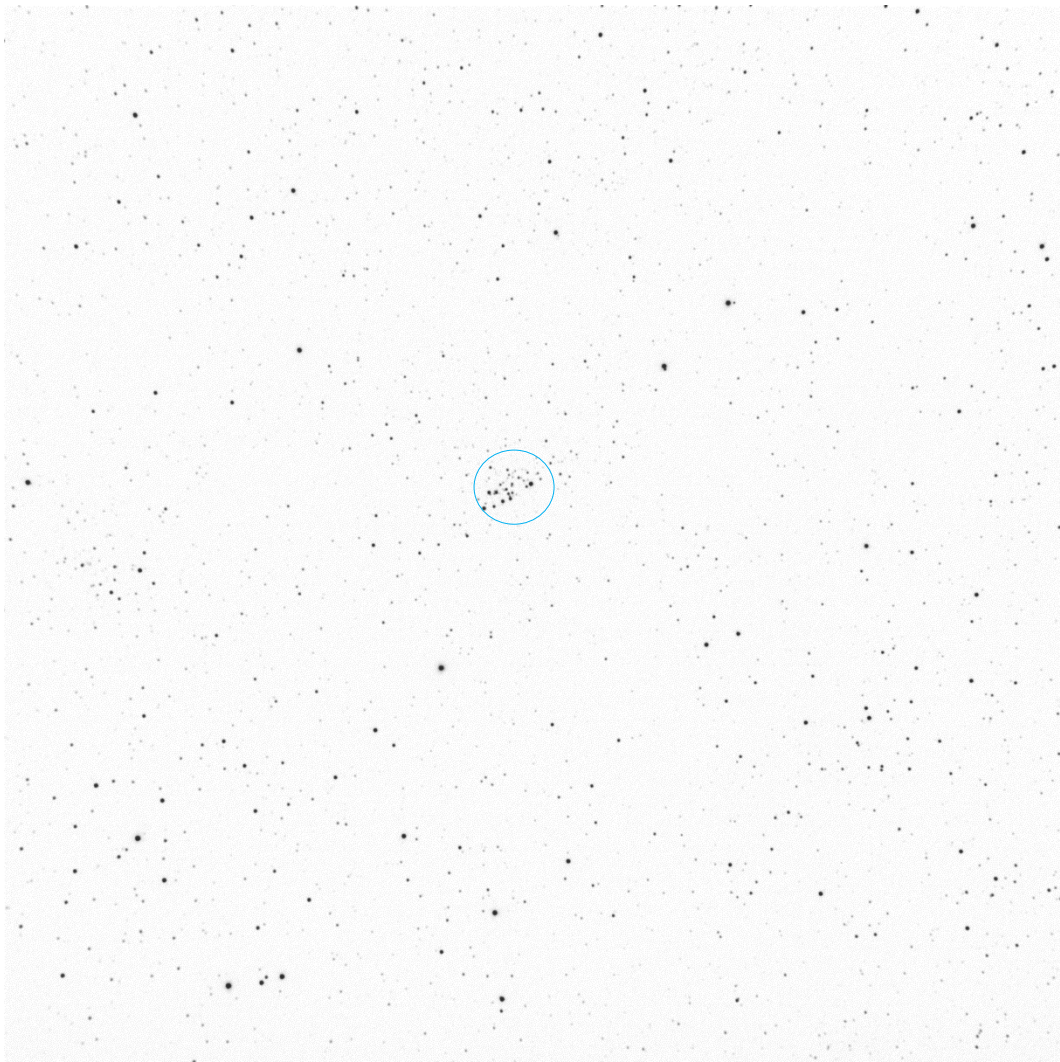

# Observation Log Sheet

Object	<b>Basel 2</b>	Date	10/21/23
Right Ascension (2000)	23h08m18s	Time	21:40
Declination (2000)	+60°31'00"	Sky: Transparency	Average
Constellation	Cephus	Seeing	Average
Magnitude	9.7	Location	West Columbia TX
Angular Diameter (')	5.0	Instrument	Astro Tech AT80ED
Concentration Class	II-3-p	Camera	ZWO ASI183MC
Distance (ly)	6400	Sub Exposure (sec)	15
Diameter (ly)	9.0	Total Exposure (min)	6.0
		Image Software	SharpCap 4.0
Visual Description	Small cluster in same f.o.v as the Arrowhead Cluster. 15 brighter stars and another 15 fainter ones. Detached but not concentrated.		

# Observation Log Sheet

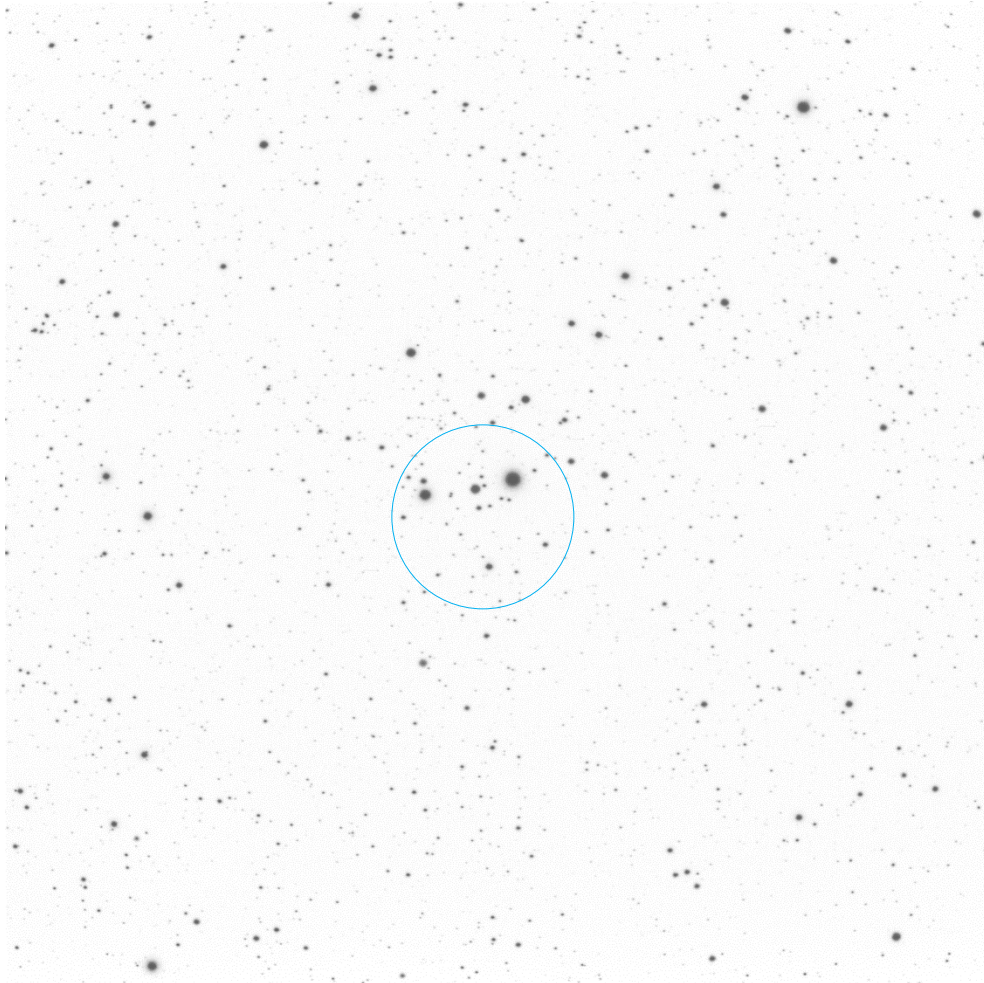

Object	<b>NGC 7510</b>	Date	10/16/23
Right Ascension (2000)	23h11m03s	Time	21:40
Declination (2000)	+60°34'12"	Sky: Transparency	Average
Constellation	Cephus	Seeing	Average
Magnitude	8.1	Location	West Columbia TX
Angular Diameter (')	6.0	Instrument	Astro Tech AT80ED
Concentration Class	II-2-m (II-2-m-n)	Camera	ZWO ASI183MC
Distance (ly)	6800	Sub Exposure (sec)	15
Diameter (ly)	12	Total Exposure (min)	4.0
		Image Software	SharpCap 4.0
Visual Description	Arrowhead cluster. Comprising of 50 or more stars of varying brightness. Well detached from field stars		

# Observation Log Sheet

Object	<b>NGC 7686</b>	Date	10/12/23
Right Ascension (2000)	23h30m07s	Time	22:06
Declination (2000)	+49°08'00"	Sky: Transparency	Average
Constellation	Andromeda	Seeing	Average
Magnitude	5.8	Location	West Columbia TX
Angular Diameter (')	14.0	Instrument	Astro Tech AT80ED
Concentration Class	II-2-p (IV-1-p)	Camera	ZWO ASI183MC
Distance (ly)	3300	Sub Exposure (sec)	15
Diameter (ly)	13	Total Exposure (min)	4.75
		Image Software	SharpCap 4.0

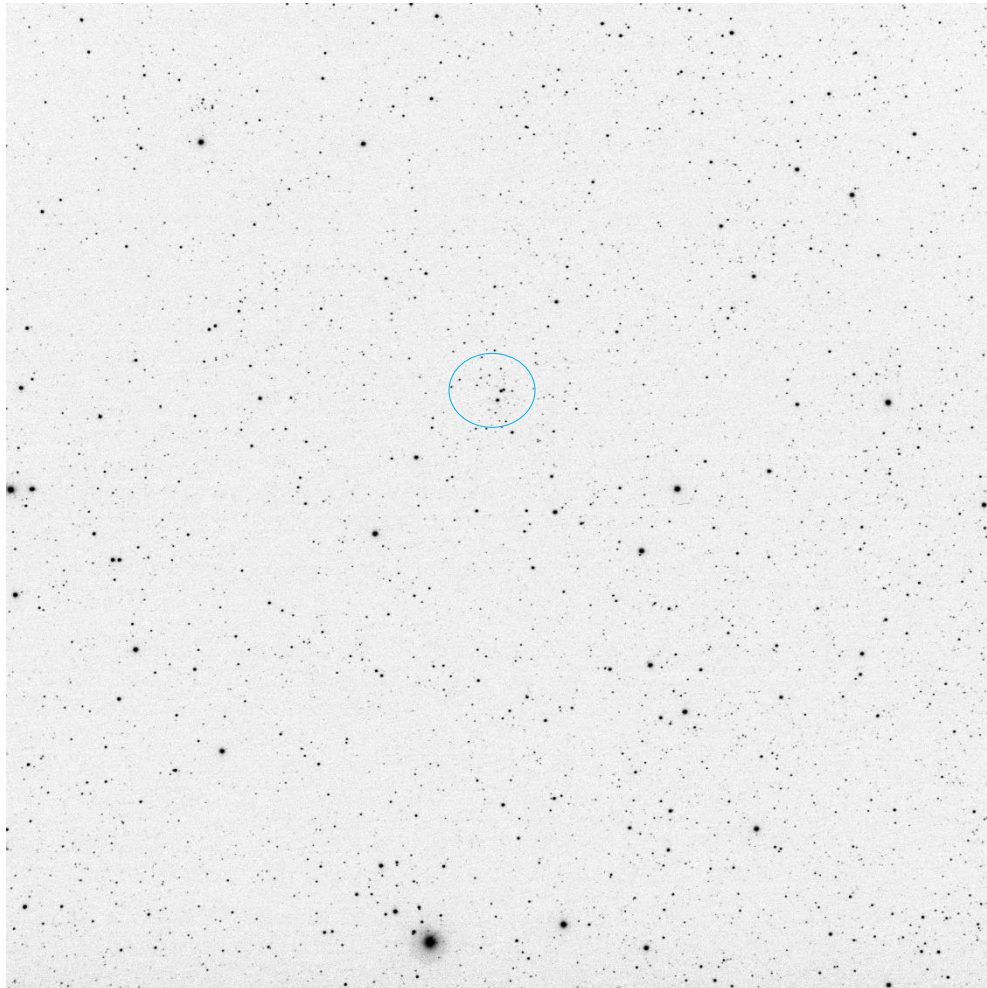

Visual Description      Cluster is noticeable by 3 brighter stars in a line. The center star is not shown as bright as the other two on my SkyTools. Possible variable in outburst? Cluster is detached with some centralization.

# Observation Log Sheet

Object	<b>King 21</b>	Date	10/21/23
Right Ascension (2000)	23h49m54s	Time	20:33
Declination (2000)	+62°43'00"	Sky: Transparency	Average
Constellation	Cassiopeia	Seeing	Average
Magnitude	10.6	Location	West Columbia TX
Angular Diameter (')	4.0	Instrument	Astro Tech AT80ED
Concentration Class	III-3-p	Camera	ZWO ASI183MC
Distance (ly)	6900	Sub Exposure (sec)	15
Diameter (ly)	8	Total Exposure (min)	4.5
		Image Software	SharpCap 4.0

Visual Description      Tiny cluster with two brighter stars and another half dozen fainter ones.

# Observation Log Sheet

Object	<b>King 12</b>	Date	10/21/23
Right Ascension (2000)	23h53m03s	Time	20:46
Declination (2000)	+61°57'28"	Sky: Transparency	Average
Constellation	Cassiopeia	Seeing	Average
Magnitude	9.7	Location	West Columbia TX
Angular Diameter (')	3.0	Instrument	Astro Tech AT80ED
Concentration Class	L-1-p	Camera	ZWO ASI183MC
Distance (ly)	7800	Sub Exposure (sec)	15
Diameter (ly)	7	Total Exposure (min)	4.5
		Image Software	SharpCap 4.0

Visual Description      About 20 stars all similar in magnitude. Some concentration
